TOSHIBA Photocoupler GaAlAs IRED + Photo IC

# **TLP705**

Plasma Display Panel.
Industrial Inverter
IGBT/Power MOS FET Gate Drive

TLP705 consists of a GaAlAs light emitting diode and a integrated photodetector.

This unit is 6-lead SDIP package. TLP705 is 50% smaller than 8pin DIP and has suited the safety standard reinforced insulation class. So mounting area in safety standard required equipment can be reduced. TLP705 is suitable for gate driving circuit of IGBT or power MOS FET. Especially TLP705 is capable of "direct" gate drive of lowr Power IGBTs.
