**TOSHIBA LED Lamps** 

# TLRE1002A(T02), TLSE1002A(T02), TLOE1002A(T02), TLYE1002A(T02), TLPYE1002A(T02), TLGE1002A(T02), TLFGE1002A(T02)

#### Panel Circuit Indicator

Unit: mm

- Surface-mount devices
- $2.0 \text{ (L)} \times 1.25 \text{ (W)} \times 1.1 \text{ (H)} \text{ mm}$
- InGaAlP LEDs
- It can be manufactured high-luminosity of equipment or reduce of electric power consumption by change in the high-luminosity LED from general-luminosity one.
- Colors: red, orange, yellow, pure yellow, green, pure green
- Pb-free reflow soldering is possible
- Applications:

Backlighting source for battery-powered equipment

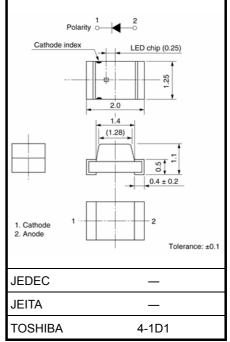

Pilot light for compact equipment

Low-power electronic equipment, etc.

• Standard embossed tape packing: T02 (3000/reel) 8-mm tape reel

#### **Color and Material**

#### The cautions

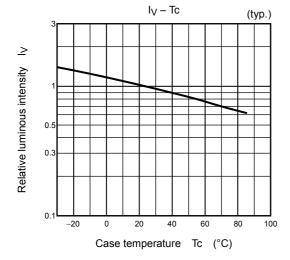

- This visible LED lamp also emits some IR light.

  If a photodetector is located near the LED lamp, please ensure that it will not be affected by the IR light.
- This product is designed as a general display light source usage, and it has applied the measurement standard that matched with the sensitivity of human's eyes. Therefore, it is not intended for usage of functional application (ex. Light source for sensor, optical communication and etc) except general display light source.

#### **Packaging**

These LED devices are packed in an aluminum envelope with a silica gel and a moisture indicator to avoid moisture absorption. The optical characteristics of the devices may be affected by exposure to moisture in the air before soldering and they should therefore be stored under the following conditions:

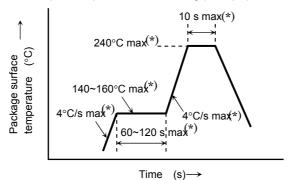

- 1. This moisture proof bag may be stored unopened within 12 months at the following conditions.
  - Temperature: 5°C~30°C
  - Humidity: 90% (max)
- 2. After opening the moisture proof bag, the devices should be assembled within 168 hours in an environment of 5°C to 30°C/70% RH or below.
  - When performing lead(Pb)-free soldering, the devices should be assembled within 72 hours in an environment of 5°C to 30°C/70% RH or below.
- 3. If upon opening, the moisture indicator card shows humidity 30% or above (Color of indication changes to pink) or the expiration date has passed, the devices should be baked in taping with reel.
  - After baking, use the baked devices within 72 hours, but perform baking only once.
  - Baking conditions: 60±5°C, for 12 to 24 hours.
  - Expiration date: 12 months from sealing date, which is imprinted on the same side as this label affixed.
- 4. Repeated baking can cause the peeling strength of the taping to change, then leads to trouble in mounting. Furthermore, prevent the devices from being destructed against static electricity for baking of it.
- 5. If the packing material of laminate would be broken, the air tightness would deteriorate. Therefore, do not throw or drop the packed devices.

# **Mounting Method**

#### **Soldering**

• Reflow soldering (example)

Temperature profile for Pb soldering (example)

- The products are evaluated using above reflow soldering conditions. No additional test is performed exceed the condition (i.e. the condition more than (\*)MAX values) as a evaluation. Please perform reflow soldering under the above conditions.
- Please perform the first reflow soldering with reference to the above temperature profile and within 168 h of opening the package.
- Second reflow soldering
  - In case of second reflow soldering should be performed within 168 h of the first reflow under the above conditions.
  - Storage conditions before the second reflow soldering: 30°C, 70% RH (max)
- Make any necessary soldering corrections manually.

(only once at each soldering point)

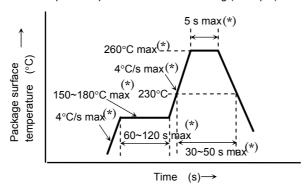

Soldering iron: 25 W

Temperature : 300°C or less Time : within 3 s

• Do not perform wave soldering.

• Reflow soldering (example)

Temperature profile for Pb-free soldering (example)

- The products are evaluated using above reflow soldering conditions. No additional test is performed exceed the
  condition (i.e. the condition more than (\*)MAX values) as a evaluation. Please perform reflow soldering under
  the above conditions.
- Please perform the first reflow soldering with reference to the above temperature profile and within 72 h of opening the package.
- · Second reflow soldering

In case of second reflow soldering should be performed within 72 h of the first reflow under the above conditions. Storage conditions before the second reflow soldering: 30°C, 70% RH (max)

Make any necessary soldering corrections manually.

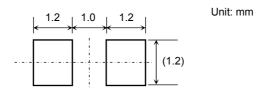

(only once at each soldering point)

Soldering iron:  $25~\mathrm{W}$ Temperature :  $300^{\circ}\mathrm{C}$  or less

Time : within 3 s

• Do not perform wave soldering.

# **Recommended soldering pattern**

#### Cleaning

When cleaning is required after soldering, Toshiba recommends the following cleaning solvents. It is confirmed that these solvents have no effect on semiconductor devices in our dipping test (under the recommended conditions). In selecting the one for your actual usage, please perform sufficient review on washing condition, using condition and etc.

ASAHI CLEAN AK-225AES : (made by ASAHI GLASS) KAO CLEAN TROUGH 750H : (made by KAO)

PINE ALPHA ST-100S : (made by ARAKAWA CHEMICAL)
TOSHIBA TECHNOCARE : (made by GE TOSHIBA SILICONES)

(FRW-17, FRW-1, FRV-100)

#### Precaution when mounting

Do not apply force to the plastic part of the LED under high-temperature conditions.

To avoid damaging the LED plastic, do not apply friction using a hard material.

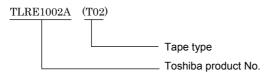

When installing the PCB in a product, ensure that the device does not come into contact with other emponents.

# **Tape Specifications**

#### 1. Product number format

The type of package used for shipment is denoted by a symbol suffix after the product number. The method of classification is as below. (However, this method does not apply to products whose electrical/optical characteristics differ from standard Toshiba specifications)

- (1) Tape Type: T02 (4-mm pitch)
- (2) Example

#### 2. Handling precautions

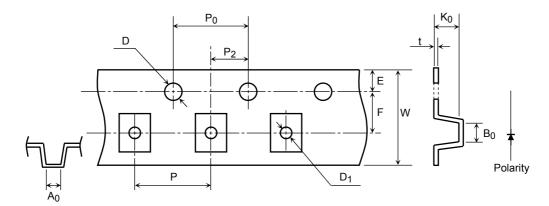

Tape material protected against static electricity. However, static electricity may occur depending on quantity of charged static electricity and a device may attach to a tape, or a device may be unstable when peeling a tape cover.

- (a) Since tape materials may accumulate an electrostatic charge, use an ionizer to neutralize the ambient air
- (b) For transport and temporary storage of devices, use containers (boxes and bags) and jigs that are made of anti-static materials or of materials which dissipate electrostatic charge.

#### 3. Tape dimensions

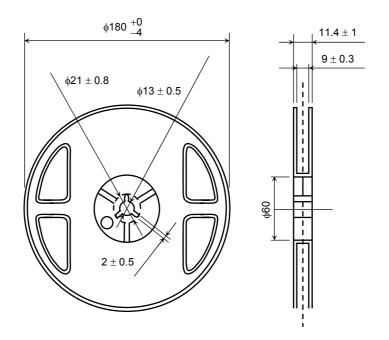

Symbol	Value	Tolerance
D	1.50	+0.1/-0
Е	1.75	±0.1
P <sub>0</sub>	4.00	±0.1
t	0.20	±0.05
F	3.50	±0.05
D <sub>1</sub>	1.10	±0.1

Unit: mm Tolerance Symbol Value 2.00 ±0.05  $P_2$ 8.00 ±0.3 Р 4.00  $\pm 0.1$  $A_0$ 1.45 ±0.1 B<sub>0</sub> 2.25 ±0.1 1.30 ±0.05  $K_0$ 

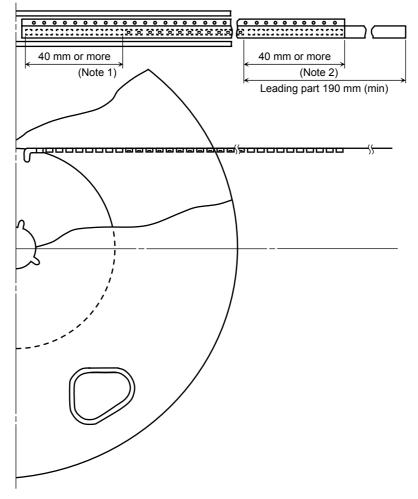

#### 4. Reel dimensions

Unit: mm

# 5. Leader and trailer section of tape

16

Note 1: Empty trailer section

Note 2: Empty leader section

# 6. Packing display

(1) Packing quantity

Reel	3,000 pcs
Carton	15,000 pcs

(2) Package form: Each reel is sealed in an aluminum pack with silica gel.

#### 7. Label format

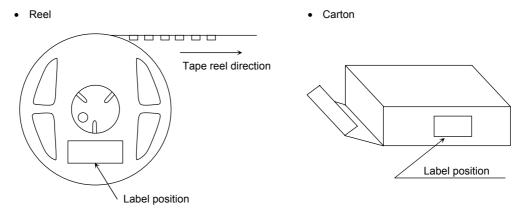

(1) Example: TLRE1002A (T02)

P/N:				TOSHIBA
TYPE	TLRE1002A			
ADDC	(T02)	Q'TY	3,000 pcs	
	nber Key code for TSB SYMBOL)	32C	3000	
Heam	ndor 5-30dogC/70%RH wi	thin 79	9h	

Use under  $5-30 \deg C/70\% RH$  within 72h

(2) Label location

The aluminum package in which the reel is supplied also has a copy of the label attached to center of one side.

#### RESTRICTIONS ON PRODUCT USE

- The information contained herein is subject to change without notice.
- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.
  In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc.
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.
- The products described in this document shall not be used or embedded to any downstream products of which manufacture, use and/or sale are prohibited under any applicable laws and regulations.
- GaAs(Gallium Arsenide) is used in this product. The dust or vapor is harmful to the human body. Do not break, cut, crush or dissolve chemically.
- The information contained herein is presented only as a guide for the applications of our products. No
  responsibility is assumed by TOSHIBA for any infringements of patents or other rights of the third parties which
  may result from its use. No license is granted by implication or otherwise under any patent or patent rights of
  TOSHIBA or others.
