Model No. **KX-TA308**

Please read this manual before connecting the Advanced Hybrid System.

Thank you for purchasing this Panasonic Model KX-TA308,
Advanced Hybrid System.

System Components

System Components Table

	Model	Description
Service Unit	KX-TA308	Advanced Hybrid System (Main Unit)
Telephones	KX-TA30820 KX-TA30830 KX-TA30850 KX-T7885 KX-TD7895	Proprietary Telephone Proprietary Telephone with Backlit Display Proprietary Telephone Wireless Proprietary Telephone Wireless Proprietary Telephone
Optional Equipment	KX-T30865	Doorphone

The KX-TA308XX series telephones are available only for the KX-TA308.
For details about the KX-T7885 and KX-TD7895, refer to the “Operating Instructions”
for each wireless phone.

Attention

- Keep the unit away from heating appliances and electrical noise generating devices such as fluorescent lamps, motors and televisions. These noise sources can interfere with the performance of the Advanced Hybrid System.
- This unit should be kept free of dust, moisture, high temperature (more than 40 °C {104 °F}) and vibration, and should not be exposed to direct sunlight.
- Never attempt to insert wires, pins, etc. into the vents or other holes of this unit.
- If there is any trouble, disconnect the unit from the telephone line. Plug the telephone directly into the telephone line. If the telephone operates properly, do not reconnect the unit to the line until the trouble has been repaired by an authorized Panasonic Factory Service Center. If the telephone does not operate properly, chances are that the trouble is in the telephone system, and not in the unit.
- Do not use benzine, thinner, or the like, or any abrasive powder to clean the cabinet. Wipe it with a soft cloth.

WARNING

THIS UNIT MAY ONLY BE INSTALLED AND SERVICED BY QUALIFIED SERVICE PERSONNEL.

WHEN A FAILURE OCCURS WHICH RESULTS IN THE INTERNAL PARTS BECOMING ACCESSIBLE, DISCONNECT THE POWER SUPPLY CORD IMMEDIATELY AND RETURN THIS UNIT TO YOUR DEALER.

DISCONNECT THE TELECOM CONNECTION BEFORE DISCONNECTING THE POWER CONNECTION PRIOR TO RELOCATING THE EQUIPMENT, AND RECONNECT THE POWER FIRST.

THIS UNIT IS EQUIPPED WITH AN EARTHING CONTACT PLUG. FOR SAFETY REASONS THIS PLUG MUST ONLY BE CONNECTED TO AN EARTHING CONTACT SOCKET WHICH HAS BEEN INSTALLED ACCORDING TO REGULATIONS.

THE POWER SUPPLY CORD IS USED AS THE MAIN DISCONNECT DEVICE, ENSURE THAT THE SOCKET-OUTLET IS LOCATED/INSTALLED NEAR THE EQUIPMENT AND IS EASILY ACCESSIBLE.

TO PREVENT FIRE OR SHOCK HAZARD, DO NOT EXPOSE THIS PRODUCT TO RAIN OR MOISTURE.

The serial number of this product may be found on the label affixed to the side of the unit. You should note the model number and the serial number of this unit in the space provided and retain this book as a permanent record of your purchase to aid in identification in the event of theft.

MODEL NO.: _____

SERIAL NO.: _____

Attention

When you ship the product

Carefully pack and send it prepaid, adequately insured and preferably in the original carton. Attach a postage-paid letter, detailing the symptom, to the outside of the carton. **DO NOT** send the product to the Executive or Regional Sales offices. They are **NOT** equipped to make repairs.

Product service

Panasonic Factory Servicenters for this product are listed in the servicenter directory. Consult your certified Panasonic dealer for detailed instructions.

Important Safety Instructions

When using your telephone equipment, basic safety precautions should always be followed to reduce the risk of fire, electric shock and injury to persons, including the following:

1. Read and understand all instructions.
2. Follow all warnings and instructions marked on the product.
3. Unplug this product from the wall outlet before cleaning. Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.
4. Do not use this product near water, for example, near a bathtub, wash bowl, kitchen sink, or laundry tub, in a wet basement, or near a swimming pool.
5. Do not place this product on an unstable cart, stand, or table. The product may fall, causing serious damage to the product.
6. Slots and openings in the cabinet and the back or bottom are provided for ventilation, to protect it from overheating, these openings must not be blocked or covered. The openings should never be blocked by placing the product on the bed, sofa, rug, or other similar surface. This product should never be placed near or over a radiator or heat register. This product should not be placed in a built-in installation unless proper ventilation is provided.
7. This product should be operated only from the type of power source indicated on the marking label. If you are not sure of the type of power supply to your home, consult your dealer or local power company.
8. This product is equipped with a three wire grounding type plug, a plug having a third (grounding) pin. This plug will only fit into a grounding type power outlet. This is a safety feature. If you are unable to insert the plug into the outlet, contact your electrician to replace your obsolete outlet. Do not defeat the safety purpose of the grounding type plug.
9. Do not allow anything to rest on the power cord. Do not locate this product where the cord will be abused by people walking on it.
10. Do not overload wall outlets and extension cords as this can result in the risk of fire or electric shock.

Important Safety Instructions

11. Never push objects of any kind into this product through cabinet slots as they may touch dangerous voltage points or short out parts that could result in a risk of fire or electric shock. Never spill liquid of any kind on the product.
12. To reduce the risk of electric shock, do not disassemble this product, but take it to a qualified serviceman when some service or repair work is required. Opening or removing covers may expose you to dangerous voltages or other risks. Incorrect reassembly can cause electric shock when the appliance is subsequently used.
13. Unplug this product from the wall outlet and refer servicing to qualified service personnel under the following conditions:
 - A. When the power supply cord or plug is damaged or frayed.
 - B. If liquid has been spilled into the product.
 - C. If the product has been exposed to rain or water.
 - D. If the product does not operate normally by following the operating instructions. Adjust only those controls, that are covered by the operating instructions because improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the product to normal operation.
 - E. If the product has been dropped or the cabinet has been damaged.
 - F. If the product exhibits a distinct change in performance.
14. Avoid using a telephone (other than a cordless type) during an electrical storm. There may be a remote risk of electric shock from lightning.
15. Do not use the telephone to report a gas leak in the vicinity of the leak.

SAVE THESE INSTRUCTIONS

F.C.C. Requirements and Relevant Information

1. Notification to the Telephone Company

This equipment complies with Part 68 of the FCC rules and the requirements adopted by the ACTA. On the side of this equipment is a label that contains, among other information, a product identifier in the format: ACJMF04BKX-TA308. If requested, this number must be provided to the telephone company.

Installation must be performed by a qualified professional installer. If required, provide the telephone company with the following technical information:

- Telephone numbers to which the system will be connected
- Make: Panasonic
- Model: KX-TA308
- Ringer Equivalence No.: 0.4B
- Facility Interface Code: 02LS2
- Service Order Code: 9.0F
- Required Network Interface Jack: RJ11

2. Ringer Equivalence Number (REN)

The REN is used to determine the number of devices that may be connected to a telephone line. Excessive RENs on a telephone line may result in the devices not ringing in response to an incoming call. In most, but not all areas, the sum of RENs should not exceed five (5.0). To be certain of the number of devices that may be connected to a line, as determined by the total RENs, contact the local telephone company.

3. Incidence of Harm to the Telephone Lines

If this equipment causes harm to the telephone network, the telephone company will notify you in advance that temporary discontinuance of service may be required. But if advance notice isn't practical, the telephone company will notify the customer as soon as possible. Also, you will be advised of your right to file a complaint with the FCC if you believe it is necessary.

4. Changes in Telephone Company Communications Facilities, Equipment, Operations and Procedures

The telephone company may make changes in its facilities, equipment, operations or procedures that could affect the operation of the equipment. If this happens the telephone company will provide advance notice in order for you to make necessary modifications to maintain uninterrupted service.

5. Trouble with This Equipment

If trouble is experienced with this equipment, for repair or warranty information, please see the attached warranty, which includes the Servicer Directory. If the equipment is causing harm to the telephone network, the telephone company may request that you disconnect the equipment until the problem is resolved.

6. Connection to Party Line

Connection to party line service is subject to state tariffs. Contact the state public utility commission, public service commission or corporation commission for information.

F.C.C. Requirements and Relevant Information

CAUTION

If your home has specially wired alarm equipment connected to the telephone line, ensure the installation of this equipment does not disable your alarm equipment. If you have questions about what will disable alarm equipment, consult your telephone company or a qualified installer.

Note

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

CAUTION

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this device.

When programming emergency numbers and / or making test calls to emergency numbers:

1. Remain on the line and briefly explain to the dispatcher the reason for the call before hanging up.
2. Perform such activities in the off-peak hours, such as early morning hours or late evenings.

WARNING

The software contained in the TRS feature to allow user access to the network must be upgraded to recognize newly established network area codes and exchange codes as they are placed into service. Failure to upgrade the premises PBXs or peripheral equipment to recognize the new codes as they are established will restrict the customer and the customer's employees from gaining access to the network and to these codes.

KEEP THE SOFTWARE UP-TO-DATE WITH THE LATEST DATA.

Introduction

This Installation Manual provides technical information for the Panasonic Advanced Hybrid System, KX-TA308. It is designed to serve as an overall technical reference for the system and includes a description of the system, its hardware and software, features and services and environmental requirements.

This manual contains the following sections.

Section 1, System Outline

Provides general information on the system including system capacity and specifications.

Section 2, Installation

Contains the basic system installation and wiring instructions.

Section 3, Features

Describes all the basic, optional and programmable features in alphabetical order. It also provides information about the programming required, conditions, connection references, related features and operation for every feature.

Section 4, System Programming

Provides step-by-step programming instructions for a proprietary telephone.

Section 5, List

Lists the tone/ring tone and default values for system programming.

Section 6, Troubleshooting

Provides information for system and telephone troubleshooting.

Section 7, Programming Tables

Provides a reference for entering user-programmed data.

NOTE

The following document may be used in conjunction with this manual.

- User Manual for the KX-TA308 System, Proprietary Telephones and Single Line Telephones

6.1	Installation	6-2
6.2	Connection	6-3
6.3	Operation	6-4

Section 7 Programming Tables 7-1

Section 1

System Outline

This section provides general information on the system,
including system capacity and specifications.

1.1 System Highlights

System Capacity

	Basic System
Outside (CO) lines	3
Extensions	8

Paralleled Telephone Connection

Every jack in the system also supports the parallel connection of a proprietary telephone and a single line device. They share the same extension number and are considered by the system to be one extension.

Hybrid System

This system supports the connection of analog proprietary telephones and single line devices such as single line telephones, fax machines, and data terminals.

Proprietary Telephones (PT)

The system supports three different models of analog proprietary telephones which range from a set with a monitor to a set with a display and speakerphone button.

Wireless Proprietary Telephones

This system supports two models of wireless proprietary telephones. These phones provide system features that make them superior to regular cordless telephones. Please refer to wireless phone manuals for complete operating instructions.

Programming System

The system is programmed from a proprietary telephone with display. A PC is not required.

Caller ID

Allows the user to see the name or telephone number of a caller on the telephone display before answering a call.

Caller ID Call Waiting

Allows the user to see the name or telephone number of a second caller during a conversation.

Local Carrier-Based Voice Mail Service

Allows the user to receive remote voice mail service from the telephone company to record caller messages when calls cannot be answered.

1.2 Basic System Construction

The KX-TA308 Advanced Hybrid System has a capacity of three outside (CO) lines and eight extensions. It is capable of supporting Panasonic analog proprietary telephones, and single line devices such as single line telephones and a fax machine.

To expand its capabilities, the system can be equipped with optional components or customer-supplied peripherals such as an external speaker and external music source (e.g., a radio).

1.3 Proprietary Telephones

The following Panasonic proprietary telephones are available for use with this system.

Proprietary Telephone	Description
KX-TA30820	Speakerphone, 12 Flexible CO
KX-TA30830	Backlit Display, Speakerphone, 12 Flexible CO
KX-TA30850	Monitor, 12 Flexible CO
KX-T7885	Wireless Proprietary Telephone
KX-TD7895	Wireless Proprietary Telephone

Note: Flexible CO: Flexible CO button (programmable)

1.4 Pre-installed Cards

1.4.1 Caller ID Card

A Caller ID Card is pre-installed to the system. This card supports the following.

Caller ID:

Receives the Caller ID Service from the Central Office. A specified display proprietary telephone with Caller ID service can display the information. It can also display caller's information which has been stored in the system according to the Caller ID service.

Local Carrier-Based Voice Mail Service:

Allows the user to receive the voice mail service from the telephone company. After subscription, the voice mail system can answer calls automatically instead of the PBX when the line is busy or calls are not answered, and callers can leave their messages in a mailbox provided by the telephone company.

Programming References

See "Programming References" in Section 3, Features, Caller ID, Caller ID Call Waiting and Local Carrier-Based Voice Mail Service.

Feature References

Section 3, Features

Caller ID

Caller ID Call Waiting

Local Carrier-Based Voice Mail Service

1.4.2 Doorphone/Door Opener Card

This card supports two doorphones and two door openers. The doorphone is optional (KX-T30865).

1.5 Specifications

1.5.1 General Description

System Capacity	Outside (CO) Lines	3 max.
	Extensions	8 max.
Control Method	CPU: 16 bit CPU Control ROM: 4 Mbit, Control RAM; 1 Mbit	
Switching	Space Division CMOS Crosspoint Switch	
Power Supplies	Primary	120 V AC, 60 Hz (1.2 A)
	Secondary	Circuit Volt: +5 V, +26 V
Power Consumption	45 W (When power is off by the Power Switch: 1.2 W)	
Dialing	Dial Pulse (DP) 10 pps, 20 pps, Tone (DTMF) Dialing, DTMF-DP	
Intercom Paths	4	
Connector	Outside (CO) Lines	2-pin Modular Connector (RJ11)
	Extensions/Doorphone	4-pin Modular Connector
	Pager/Music Source	EIAJ RC-6701 A plug (two-conductor, ø 3.5 mm in diameter)

Extension Connection Cable

Single Line Telephone	1 pair wire (T, R)
KX-TA30820/ KX-TA30830/ KX-TA30850	2 pair wire (T, R, H, L)

SMDR (Station Message Detail Recording)

Interface	Serial Interface (RS-232C) (D-SUB, 9-pin)
Output Equipment	Printer
Recording Details	Date, Time, Extension Number, Outside (CO) Line Number, Dialed Number, Call Duration, Account Code, Caller ID

1.5.2 Characteristics

Station Loop Limit	KX-TA30820 / KX-TA30830 / KX-TA30850 /	40 Ω
	Single Line Telephone	600 Ω including set
	Doorphone	20 Ω

Minimum Leakage Resistance 15 000 Ω

Maximum Number of Station Instruments per Line

Each extension port supports one proprietary telephone or one single line telephone. If Parallel Connection is used, the maximum number of single line devices that can be connected in parallel is just one device (one SLT, one fax, one cordless, etc.).

Ring Voltage 80 Vrms at 20 Hz depending on the Ringing Load

Central Office Loop Limit 1 600 Ω max.

Environmental Requirements 0 °C – 40 °C {32 °F – 104 °F},
10 % – 90 % relative humidity

Hookswitch Flash Time Range 204 ms – 1 000 ms

Door Opener 60 V DC, 1 A (Max) / 40 V AC, 1 A (Max)*

Doorbell/Door Chime 60 V DC, 1 A (Max) / 40 V AC, 1 A (Max)*

Dimensions (H×W×D) 284 mm × 368 mm × 95 mm
{14½" × 11⅛" × 3¾"}

Mass (Weight) Approx. 2.5 kg {5.6 lb}

* Please make sure these values are not exceeded.

1.5.3 System Capacity

Lines, Cards, Station Equipment

Item	Max. Quantity
Service Units	1
Outside (CO) Lines	3
Extension Jacks	8
Station Terminals	16
Caller ID Card	1
Doorphone/Door Opener Card	1
Doorphones	2
Door Openers	2
Doorbell/Door Chime	2
External Pager	1
External Music Source	1

System Data

Item	Max. Quantity
Operator	1
System Speed Dialing	100
One-Touch Dialing	12 per extension (proprietary telephone)
Personal Speed Dialing	10 per extension
Call Park Areas	10
Absent Messages	6
Toll Restriction Classes	5
Extension Groups	8

Section 2

Installation

This section contains the basic system installation and wiring instructions.

2.1 Before Installation

Please read the following notes concerning installation and connection before installing the system and terminal equipment.

Safety Installation Instructions

When installing telephone wiring, basic safety precautions should always be followed to reduce the risk of fire, electric shock and injury to persons, including the following:

1. Never install telephone wiring during a lightning storm.
2. Never install telephone jacks in wet locations unless the jack is specifically designed for wet locations.
3. Never touch uninsulated telephone wires or terminals unless the telephone line has been disconnected at the network interface.
4. Use caution when installing or modifying telephone lines.

Installation Precautions

This system is designed for wall mounting only. Avoid installing in the following places. (Doing so may result in malfunction, noise, or discoloration.)

1. In direct sunlight and hot, cold, or humid places. (Temperature range: 0 °C – 40 °C {32 °F – 104 °F})
2. Sulfuric gases produced in areas where there are thermal springs, etc. may damage the equipment or contacts.
3. Places in which shocks or vibrations are frequent or strong.
4. Dusty places, or places where water or oil may come into contact with the system.
5. Near high-frequency generating devices such as sewing machines or electric welders.
6. On or near computers, telexes, or other office equipment, as well as microwave ovens or air conditioners. (It is preferable not to install the system in the same room with the above equipment.)
7. Install at least 1.8 m {6 feet} away from radios and televisions. (Both the system and Panasonic proprietary telephones)
8. Do not obstruct area around the system (for reasons of maintenance and inspection — be especially careful to allow space for cooling above and at the sides of the system).

Wiring Precautions

Be sure to follow these instructions when wiring the unit:

1. Do not wire the telephone cable in parallel with an AC power source, computer, telex, etc. If the cables are run near those wires, shield the cables with metal tubing or use shielded cables and ground the shields.

2.1 Before Installation

2. If cables are run on the floor, use protectors to prevent the wires from being stepped on. Avoid wiring under carpets.
3. Avoid using the same power supply outlet for computers, telexes, and other office equipment. Otherwise, the system operation may be interrupted by the induction noise from such equipment.
4. Please use one pair telephone wire for extension connection of (telephone) equipment such as single line telephones, data terminals, answering machines, computers, etc., except Panasonic proprietary telephones (e.g., KX-TA30830).
5. Unplug the system during wiring. After all of the wiring is completed, plug in the system.
6. Mis-wiring may cause the system to operate improperly. Refer to Section 6.1 “Installation” and Section 6.2 “Connection”.
7. If an extension does not operate properly, disconnect the telephone from the extension line and then connect again, or turn off the Power Switch of the system and then on again.
8. The system is equipped with a 3-wire grounding type plug. This is a safety feature. If you are unable to insert the plug into the outlet, contact your electrician to replace your obsolete outlet. Do not defeat the purpose of the grounding-type plug.
9. Outside (CO) Lines should be installed with lightning protectors. For details, refer to Section 2.3.3 “Outside (CO) Line Connection – Installing Lightning Protectors”.

2.2 Installation of the Main Unit

2.2.1 Unpacking

Unpack the box and check the items below.

Main Unit	one
AC Cord	one
Template	one
Screws (Wall Mounting)	three
Washers (Wall Mounting)	three
Pager Connector	one
Music Source Connector	one
Terminal Boxes (Doorphone)	two
Telephone Line Cords (Doorphone)	two

2.2.2 Location of Interfaces

2.2.3 Wall Mounting

This set is designed for wall mounting only. The wall where the main unit is to be mounted must be able to support the weight of the main unit. If screws other than the ones supplied are used, use screws with the same diameter as the ones enclosed.

Mounting on a Wooden Wall

1. Place the template (included) on the wall to mark the screw positions.

2. Install the screws (included) into the wall.

3. Hook the main unit on the screw heads.

Mounting on a Concrete or Mortar Wall

1. Place the template (included) on the wall to mark the screw positions.
2. Drill holes and drive the anchor plugs (user-supplied) with a hammer, flush to the wall.

3. Install the screws (included) into the anchor plugs.

4. Hook the main unit on the screw heads.

2.2.4 Frame Ground Connection

IMPORTANT!!!

Connect the frame of the main unit to the ground.

1. Loosen the screw.
2. Insert the grounding wire (user-supplied)*.
3. Tighten the screw.
4. Connect the grounding wire to the ground.

* For grounding wire, green-and-yellow insulation is required, and the cross-sectional area of the conductor must be more than 0.75 mm² or 18 AWG.

- Be sure to comply with applicable local regulations (e.g., law, guidelines).
- Proper grounding (connection to earth) is very important to protect the Advanced Hybrid System from the bad effects of external noise or to reduce the risk to the user of electrocution in the case of lightning strike.
- The ground wire of the AC cable has an effect against the external noise and lightning strikes, but it may not be enough to protect the Advanced Hybrid System. A permanent connection between earth and the ground terminal of the Advanced Hybrid System must be made.

In most of North America, the ground provided by the “Third wire ground” at the commercial or residential power outlet will be satisfactory. However, in some cases this ground may be installed incorrectly. Therefore, the following test procedure should be performed.

Test Procedure

1. Obtain a suitable voltmeter and set it for a possible reading of up to 250 V AC.
2. Connect the meter probes between the two main AC voltage points on the wall outlet. The reading obtained should be 108 V AC – 132 V AC.
3. Move one of the meter probes to the 3rd prong terminal (GND).
Either the same reading or a reading of 0 V should be obtained.

2.2.4 Frame Ground Connection

4. If a reading of 0 V at one terminal and a reading of 108 V AC – 132 V AC at the other terminal is not obtained, the outlet is not properly grounded.
This condition should be corrected by a qualified electrician (per article 250 of the National Electrical Code).
5. If a reading of 0 V at one terminal and a reading of 108 V AC – 132 V AC at the other terminal is obtained, then set the meter to the “OHMS/RX1” scale, place one probe at the GND Terminal and the other probe at the terminal which gave a reading of 0 V.
A reading of less than 1 Ω should be obtained.
If the reading is not obtained, the outlet is not adequately grounded. See a qualified electrician.

2.3 Connection

2.3.1 System Connection Diagram

2.3.2 Opening the Side Cover

1. Loosen the screw.
2. Remove the right side cover.

Note The screw cannot be removed from the cover.

2.3.3 Outside (CO) Line Connection

Connection

1. Insert the modular plugs of the telephone line cords (2-conductor wiring) into the modular jacks on the system.
2. Connect the line cord to the terminal board or the modular jacks from the Central Office jack.

2.3.3 Outside (CO) Line Connection

Installing Lightning Protectors

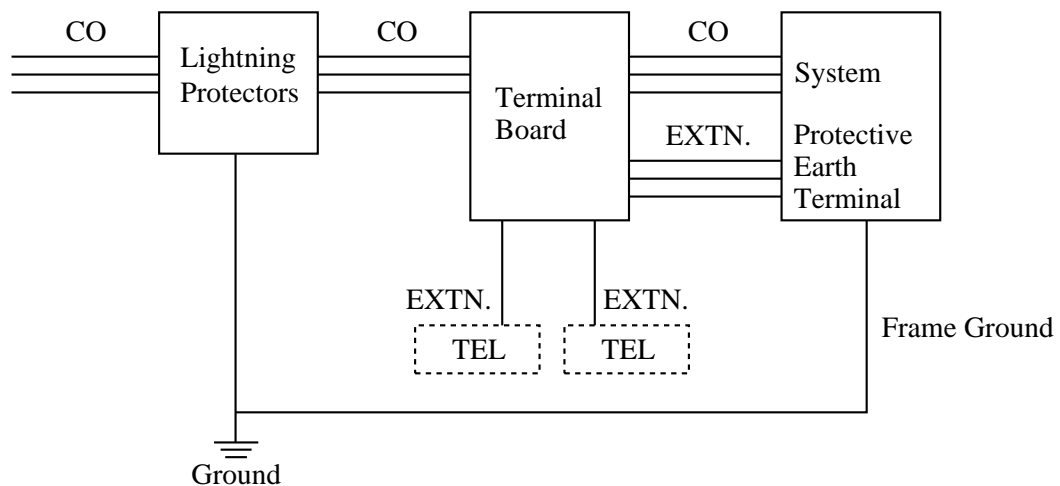

A lightning protector is a device to be installed on an outside (CO) line to prevent a dangerous surge from entering the building and damaging the equipment.

A dangerous surge can occur if a telephone line comes in contact with a power line. Problems due to lightning surges have been steadily increasing with the development of electronic equipment. In many countries, there are regulations requiring the installation of a lightning protector. A lightning strike to a telephone cable which is 10 m {33 feet} above ground can be as high as 200 000 V. This system should be installed with lightning protectors. In addition, grounding (connection to earth ground) is very important to protect the system.

Recommended lightning protectors

- TELESPIKE BLOK MODEL TSB (TRIPPE MFG. CO.)
- SPIKE BLOK MODEL SK6-0 (TRIPPE MFG. CO.)
- Super MAX™ (PANAMAX)
- MP1 (ITW LINK)

Installation

CO: Outside (CO) line

EXTN.: Extension line

TEL: Telephone

2.3.3 Outside (CO) Line Connection

Installation of an Earth Rod

- | | |
|--|----------------------------------|
| 1) Installation location of the earth rod .. | Near the protector |
| 2) Check obstructions | None |
| 3) Composition of the earth rod | Metal |
| 4) Depth of the earth rod | More than 50 cm
{ 20 inches } |
| 5) Size of the grounding wire | Thickness more than
18 AWG |
| 6) Length of the grounding wire | As short as possible |

Note

- The above example is only a recommendation.
- The length of the earth rod and required depth depend on the composition of the soil.

2.3.4 Extension Connection

Extension jacks 01 – 08 are for single line telephones and analog proprietary telephones.

Telephone Wiring

The maximum length of the extension line cord (twisted cable) which connects the system and the extension is as follows.

	Diameter of the line	Max. length
Single Line Telephone	22 AWG	1798 m {5900 feet}
(Station Loop Limit: 600 Ω including set)	24 AWG	1128 m {3700 feet}
	26 AWG	698 m {2290 feet}
Proprietary Telephone	22 AWG	360 m {1180 feet}
(Station Loop Limit: 40 Ω)	24 AWG	229 m {750 feet}
	26 AWG	140 m {460 feet}

2 or 4-conductor wiring is required for each extension as listed below. There are four pins possible for connection: “T” (Tip), “R” (Ring), “L” (Low) and “H” (High).

Telephone	Wiring
Single line telephone	1 pair wire (T, R)
Proprietary telephone (e.g., KX-TA30830)	2 pair wire (L, H, T, R)

- Note
- If a telephone or answering machine with an A-A1 relay is connected to the system, set the A-A1 relay switch on the telephone or answering machine to the OFF position.

Connection

Insert the modular plugs of the telephone line cords (2 or 4-conductor wiring) into the modular jacks on the system.

2.3.5 External Pager (Paging Equipment) Connection

One external pager (user-supplied) can be connected to the KX-TA308 as illustrated below.

Use an EIAJ RC-6701 A plug (two-conductor, \varnothing 3.5 mm in diameter).

- Output impedance: 600 Ω

Maximum length of the cable

AWG 18 – 22: Under 10 m {33 feet}

- Note**
- To adjust the sound level of the pager, use the volume control on the amplifier.

Programming Reference

Section 4, System Programming

[106] External Paging Access Tone

Feature References

Section 3, Features

Paging – All

Paging – External

2.3.6 External Music Source Connection

One music source, such as a radio (user-supplied), can be connected to the KX-TA308 as illustrated below.

Insert the plug to the earphone/headphone jack on the external music source.

Use an EIAJ RC-6701 A plug (two-conductor, \varnothing 3.5 mm in diameter).

- Input impedance: 8 Ω

Maximum length of the cable

AWG 18 – 22: Under 10 m { 33 feet }

- Note**
- System programming for the music source used for Music on Hold is required.
 - To adjust the sound level of the Music on Hold, use the volume control on the external music source.

Programming Reference

2.3.7 Paralleled Telephone Connection

(for a Proprietary Telephone and a Single Line Telephone)

Any single line telephone can be connected in parallel with a proprietary telephone as follows.

Using a Modular T-Adaptor

Programming Reference

Section 4, System Programming
[610] Paralleled Telephone Connection

Feature Reference

Section 3, Features
Paralleled Telephone

2.3.8 Polarity Sensitive Telephone Connection

If the telephone is polarity sensitive, follow the procedure below:

1. Complete all the required extension wiring.
2. Confirm that dialing can be done from all the extensions using a touchtone telephone.
If dialing fails, the polarity between the extension and the system must be reversed.

3. Reverse as shown.

4. Unplug the system.

5. Connect all outside (CO) lines.

6. Confirm that dialing can be done on the following extension using a touchtone telephone.

Extension (T, R) of jack 01: Outside (CO) line 1

If dialing fails, the polarity between the system and the outside (CO) line must be reversed.

7. Reverse as shown.

8. Every time an extension telephone is replaced, repeat the procedure above.

2.3.9 Printer and PC Connection

A user-supplied printer or personal computer (PC) can be connected to the system. These are used to print out or refer to the SMDR call records and system programming data.

Connect the printer cable or the PC cable to the Serial Interface (RS-232C) connector. The cable must be shielded and the maximum length is 2 m {6.5 feet}.

Arrange the cables so that the printer will be connected to the system as shown in the appropriate chart on the following page. When using special accessories such as cable, the user should use those specified in this installation manual to comply with the limits for a class B digital device pursuant to the FCC Rules.

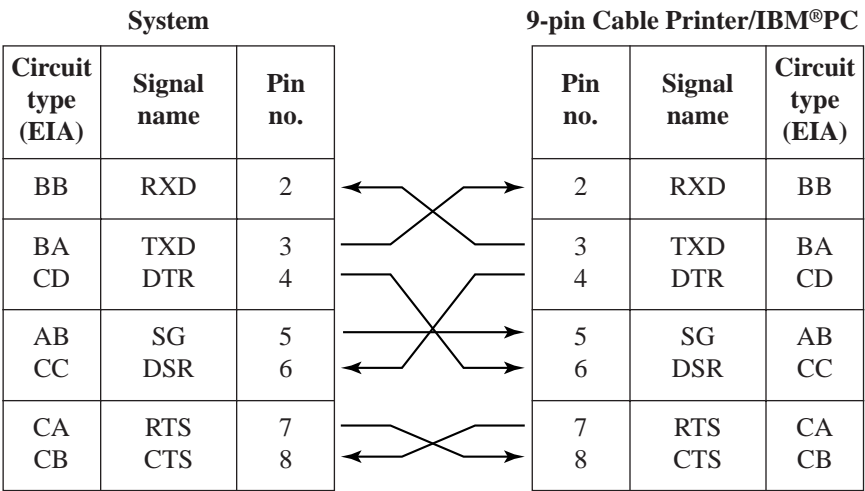

The pin configuration of the Serial Interface (RS-232C) Connector is as follows.

Pin no.	Signal name		Circuit type	
			EIA	CCITT
2	RXD	Received Data	BB	104
3	TXD	Transmitted Data	BA	103
4	DTR	Data Terminal Ready	CD	108.2
5	SG	Signal Ground	AB	102
6	DSR	Data Set Ready	CC	107
7	RTS	Request To Send	CA	105
8	CTS	Clear To Send	CB	106

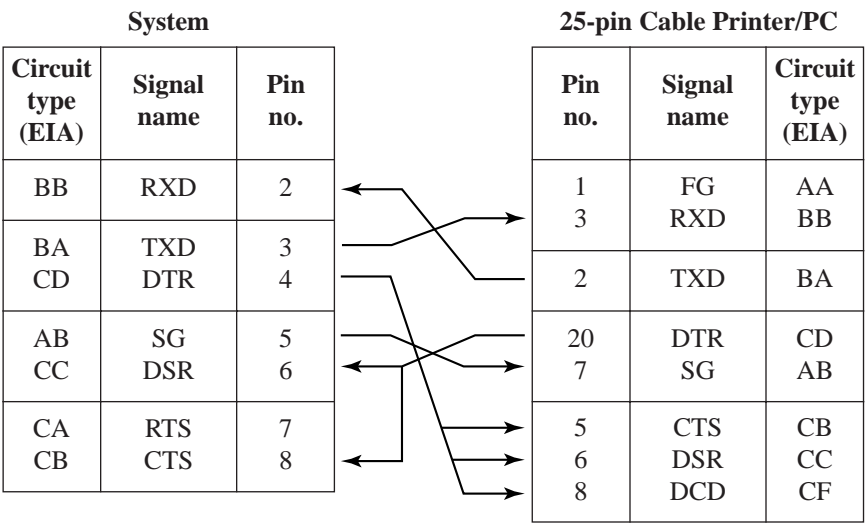

2.3.9 Printer and PC Connection

Connection Chart for a Printer / Personal Computer with the KX-TA308

If a printer or a PC with a 9-pin cable is connected, follow the chart below.

If a printer or a PC with a 25-pin cable is connected, follow the chart below.

2.3.9 Printer and PC Connection

Serial Interface (RS-232C) Signals

Frame Ground: FG

Connects the unit frame and the earth ground conductor of the AC power cord.

Transmitted Data: SD (TXD) (output)

Conveys signals from the unit to the printer. A “Mark” condition is held unless data or BREAK signals are being transmitted.

Received Data: RD (RXD) (input)

Conveys signals from the printer.

Request to Send: RS (RTS) (output)

This lead remains ON whenever DR (DSR) is ON.

Clear To Send: CS (CTS) (input)

When the CS (CTS) circuit is ON, it indicates that the printer is ready to receive data from the unit. The unit does not attempt to transfer data or receive data when the CS (CTS) circuit is OFF.

Data Set Ready: DR (DSR) (input)

When the DR (DSR) circuit is ON, it indicates the printer is ready. The DR (DSR) circuit being ON does not indicate that communication has been established with the printer.

Signal Ground: SG

Connects the DC ground of the unit for all interface signals.

Data Terminal Ready: ER (DTR) (output)

This signal line is turned ON by the unit to indicate that it is ON LINE. The ER (DTR) circuit being ON does not indicate that communication has been established with the printer. It is switched OFF when the unit is OFF LINE.

Data Carrier Detect: CD (DCD) (input)

When ON, it indicates the data terminal (DTE) that the carrier signal is being received.

2.4 Doorphone/Door Opener Card

2.4.1 Doorphone and Door Opener connection

Two doorphones (KX-T30865) and two door openers (user-supplied) can be installed.

Maximum cable length

The maximum length of the doorphone and door opener line cord which connects the system is as follows.

	Diameter of the line	Max. length
Doorphone	22 AWG	180 m {590 feet}
(Station Loop	24 AWG	113 m {370 feet}
Limit: 20 Ω)	26 AWG	70 m {230 feet}
Door Opener	22 AWG	180 m {590 feet}

1. Loosen the screw to open the doorphone unit.

2. Attach the base cover to a wall using two screws.

Note Two kinds of screws are included. Please choose the appropriate one depending on your type of wall.

 Type 1: When a doorphone plate has been fixed to the wall.

 Type 2: When you wish to install the doorphone directly to the wall.

3. Connect the wires to the screws located in the front cover.

4. Put the doorphone together and re-install the screw.

2.4.1 Doorphone and Door Opener Connection

Connection of the Doorphone

1. Connect the Doorphone/Door Opener Card to the terminal boxes using 2-conductor modular connectors.
2. Connect the wires of doorphone to the red and green screws on the terminal box.

2.4.1 Doorphone and Door Opener Connection

Connecting Door Openers

While pressing the button below a hole with a driver, insert the wire from the door opener into the hole.

- Note**
- We recommend using UL1015 wire or the equivalent for wiring.
 - The wire should be between 0.4 mm and 1.2 mm {1/64 inch – 3/64 inch} in diameter including the coating.

To the door openers

2.4.3 Securing the cords

1. Wrap the black Velcro® strap firmly around the all cords.

2. Close the right side cover and secure the screw.

Note • To detach the black Velcro strap, remove the black screw with a screwdriver.

2.5 Auxiliary Connection for Power Failure Transfer

Power failure transfer connects a specific single line telephone to the selected outside (CO) line in the event of system power failure, as follows.

Outside (CO) Line 1 – Extension (T, R) Jack 01

Connection of outside (CO) line 1 and the respective extension requires no auxiliary connection.

- Note**
- In the event of a power failure, system memory is protected by a factory-provided lithium battery. There is no memory loss except the Camp-on, Saved Number Redial, Last Number Redial, Call Park and Message Waiting memories.
 - The system automatically changes the current connection to the above connection when the power supply stops.
 - Proprietary telephones cannot be used during a system power failure. Therefore, we recommend connecting a single line telephone in parallel with the proprietary telephone connected to JACK 01.

Feature References

Section 3, Features

Paralleled Telephone

Power Failure Transfer

2.6 Closing the Side Cover

1. Replace the right side cover and tighten the screw.
2. Tie together all of the connected cords and attach them to the wall so that the cords cannot be pulled out of the system.

2.7 Starting the System for the First Time

1. Plug the AC power cord into the system and an AC outlet.
2. Turn the Power Switch on. (The power indicator will light.)
3. Perform the following operation with a proprietary telephone connected to JACK 01.
 - a) Press the PROGRAM button.
 - b) Dial * #.
 - c) Enter the system password, 1234.
 - d) Enter 999.
 - e) Press NEXT (SP-PHONE button).
 - f) Keep pressing SELECT (AUTO ANSWER/MUTE button) until “All Para” is displayed.
 - g) Press STORE (AUTO DIAL/STORE button).
 - h) Press END (HOLD button).
 - i) Press the PROGRAM button.

The system will be initialized with the default values. If the system does not work properly, see “2.9, System Data Clear”.

- CAUTION**
- The system will continue to be powered even if the Power Switch is turned “OFF”.
 - The power supply cord is used as the main disconnect device. Ensure that the outlet is located/installed near the equipment and is easily accessible.

2.8 System Restart

After starting the system, if the system does not operate properly, restart the system.

Before restarting the system, try the system feature again to confirm whether there definitely is a problem or not.

System Restart causes the following.

1. Camp-on is cleared.
2. Calls on Hold are terminated.
3. Calls on Exclusive Hold are terminated.
4. Calls in progress are terminated.
5. Call Park is cleared.
6. Last Number Redial is cleared.
7. Saved Number Redial is cleared.
8. Message Waiting is cleared.

Other data is not cleared by System Restart.

1. Turn the Power switch off and then on.

Notice If the system still does not operate properly, please see Section 2.9, “System Data Clear”.

2.9 System Data Clear

When the system does not operate properly after restarting, you can clear the programming data stored in the system. The system will restart with the default settings. First, try system program [999]. If the system still does not operate properly, please follow the procedure below.

1. Loosen the screw and open the right side cover.
2. Remove the two screws.

3. Open the left side cover.

2.9 System Data Clear

4. Slide the System Clear Switch to the “CLEAR” position.
5. Press the Reset Button.
6. Return the System Clear Switch to the “NORMAL” position before the power indicator stops flashing.
(The power indicator will flash for about 10 seconds.)

CAUTION To protect the printed circuit boards (P-boards) from static electricity, do not touch parts on the P-boards. Before touching the System Clear Switch and Reset Button, put on a grounding strap.

Notice After pressing the Reset Button, return the System Clear Switch to the “NORMAL” position in step 6 before the power indicator stops flashing. Otherwise, the system will not clear.

Condition

- Be sure the frame of the main unit is connected to the ground. Refer to Section 2.2.4 “Frame Ground Connection”.

Programming Reference

Section 4, System Programming

[999] System Data Clear

Section 3

Features

This section describes every basic, optional, and programmable feature in alphabetical order. It also provides information about the conditions, connection references, programming required, related features, and operation for every feature.

Absent Message Capability

Description

Allows an extension user to set a message which will be displayed at the calling extension to show the reason for the called extension's absence. Six messages can be programmed as desired, which are available for every extension user. Setting or canceling a message can be done by individual extension users but only callers with a display telephone can view the message.

Conditions

- The six messages are shown below. “%” means a parameter to be entered when assigning a message at an extension.
 - (1) Will Return Soon
 - (2) Gone Home
 - (3) At Ext % % % (extension number)

Account Code Entry

Description

An Account Code is used to identify incoming and outgoing outside calls for accounting and billing purposes. The account code is appended to the Station Message Detail Recording (SMDR) call record. For incoming outside calls, account codes are optional. For outgoing outside calls, there are four modes available to enter an account code: Verify-All mode, Verify-Toll mode, Forced mode, and Option mode. One mode is selected for each extension.

In Verify-All mode, the user must always enter a pre-assigned account code when making any of the following calls unless it has previously been stored in memory.

- Call Forwarding – to Outside (CO) Line
- Last Number Redial
- Line Access
- One-Touch Dialing
- Personal Speed Dialing
- Pickup Dialing
- Saved Number Redial
- System Speed Dialing

In Verify-Toll mode, the user can enter a pre-assigned account code only when the user needs to override toll restriction. Calls with COS numbers 3 through 5 will be treated as calls with COS number 2. Calls with COS numbers 1 and 2 will not be affected.

In Forced mode, the user must always enter an account code. The code can be any number.

In Option mode, the user can enter any account code if needed.

Conditions

- An account code can be stored into Memory Dialing (System/Personal Speed Dialing, One-Touch Dialing, Pickup Dialing, Call Forwarding – to Outside (CO) Line).
- Account code entry after CPC detection must be done within 30 seconds. Otherwise, the SMDR call record is activated and the code cannot be entered.
- In any mode, emergency dial numbers stored in program [309] “Emergency Dial Number Set” can be dialed out without an account code entry.

Answering, Direct Outside (CO) Line

Description

Allows a proprietary telephone user to answer an incoming call by simply pressing the appropriate CO button without lifting the handset or pressing the SP-PHONE/MONITOR button.

Condition

- This feature allows the user to specify which line will be answered when multiple incoming lines are ringing.

Programming References

No programming required.

Automatic Callback Busy (Camp-On)

Description

Allows the caller to be notified when the called party or selected outside (CO) line becomes free.

Automatic Callback – Extension

If the caller answers the callback ringing (Camp-On Recall), the called extension will automatically start ringing.

Automatic Callback – Outside (CO) Line

If the caller answers the callback ringing (Camp-On Recall), the line will be automatically selected to allow the user to make an outside call.

Conditions

- If the callback ringing (Camp-On Recall) is not answered in four rings (within 10 seconds), the callback will be canceled.
- More than one extension user can set this function to one extension or outside (CO) line at the same time.

Background Music (BGM)

Description

Allows a proprietary telephone user to listen to background music from the speaker monitor on their telephone.

Conditions

- A user-supplied external music source, such as a radio, must be connected. One external music source can be connected to the system.
- The music source is used for BGM and/or Music on Hold.
- The music is interrupted when you go off-hook.

Section 3, Features

Buttons on Proprietary Telephones

Not applicable.

Button, Group-CO (G-CO)

Description

To support efficient utilization of outside (CO) lines, a group of outside (CO) lines (outside (CO) line group) can be assigned to a CO button. The function is referred to as Group-CO (G-CO). Any incoming call from any outside (CO) line in the outside (CO) line group arrives at the G-CO button. To make an outside call, the user can access an idle outside (CO) line in the group by simply pressing the assigned G-CO button.

Conditions

- A G-CO button is not originally provided on a proprietary telephone (PT). It can be programmed on a CO button by station programming.
- The extension for receiving and/or originating calls on outside (CO) lines must be programmed.
- The same outside (CO) line group can be assigned to more than one G-CO button on the same PT.
- The same line can be assigned to a Single-CO (S-CO) button and a G-CO button.
- Immediate, delayed, no ringing or no incoming call (disable) can be selected on an extension-outside (CO) line basis.
- Users can choose a desired ringing pattern for each outside (CO) line by system programming.

Button, Other-CO (O-CO)

Description Outside (CO) lines, which are not assigned to an S-CO or G-CO button, can be assigned to a flexible CO button on a proprietary telephone (PT). The assigned button serves as the Other-CO (O-CO) button. An incoming call on an outside (CO) line arrives at the O-CO. To make an outside call, the PT user simply presses the assigned O-CO button.

- Conditions**
- An O-CO button is not originally provided on a PT. A flexible CO button can be assigned as an O-CO button by station programming.
 - Immediate, delayed, no ringing or no incoming call (disable) can be selected on an extension – outside (CO) line basis.
 - Users can choose a desired ringing pattern for each outside (CO) line by system programming.

Button, Single-CO (S-CO)

Description

A Single-CO (S-CO) button is an outside (CO) line access button. This allows a proprietary telephone user to access a specific line by pressing an S-CO button. An incoming call can be directed to an S-CO button.

Conditions

- The default setting for CO buttons is changeable. (Flexible CO Button)
- An S-CO button provides outside (CO) line status.
- One outside (CO) line can be assigned to both an S-CO and a Group-CO (G-CO) button.
- Incoming calls are indicated on a proprietary telephone, when an extension is assigned as the incoming call destination and an S-CO, G-CO and/or O-CO button is assigned.
- Immediate, delayed, no ringing or no incoming call (disable) can be selected on an extension–outside (CO) line basis.
- Users can choose a desired ringing pattern for each outside (CO) line by system programming.

Message/Ringer Lamp❖	✓	✓	✓

✓: The button is provided on the designated telephone.

❖: The button has an LED (Light Emitting Diode).

* : Buttons which can be changed to function as a feature button are called flexible buttons.

(x): Shows the number of buttons only if more than one button is provided.

The functions of the listed buttons are described below.

AUTO ANSWER/MUTE (KX-TA30820/KX-TA30830): Used for answering an extension automatically, or turns the microphone off during a conversation.

AUTO DIAL/STORE: Used for System Speed Dialing and storing program changes.

CO (Central Office line): Can make or receive an outside call or can be re-assigned to a different CO or various feature buttons.

CONF (Conference): Used to establish a three-party conference.

FLASH/RECALL: Allows you to disconnect the current call and originate another call without hanging up (Flash). Sends a flash signal to the Central Office or host PBX to access their features (External Feature Access).

FWD/DND (Call Forwarding/Do Not Disturb): Used to program Call Forwarding, and set Do Not Disturb.

HOLD: Used to place a call on hold.

INTERCOM: Used to make or receive intercom calls.

MESSAGE: Used to send a message, display the current message, call back the message sender, or can be assigned as another feature button. The Message/Ringer Lamp lights when a message waiting indication is left.

MONITOR (KX-TA30850): Used for a hands-free operation.

PAUSE: Inserts a pause in a speed dial number.

PROGRAM: Used to enter and exit the Programming mode.

REDIAL: Used for Last Number Redialing.

SP-PHONE (Speakerphone — KX-TA30820/KX-TA30830):

Used for a hands-free speakerphone operation. Pressing the button causes the telephone to switch between the handset and hands-free operation.

TRANSFER: Transfers a call to another extension or external destination.

VOICE CALL (KX-TA30850): Used to receive a notification via monitor in place of ringing.

Navigator Key (KX-TA30830): Used to adjust the volume and the display contrast or select desired items for each function.

Volume Key (KX-TA30820/KX-TA30850): Used to adjust the volume.

Message/Ringer Lamp: Used to inform telephone users visually that they have an incoming call or message from an external party or extension. The table below shows the lighting patterns for the Message/Ringer Lamp.

Lamp	Status
Flashing	The user has an incoming call.
On	The user has a message.

Conditions

- Certain buttons are equipped with light indicators (LED's) to show the line or feature status.
- CO buttons can be classified according to the following three types:
 Single-CO (S-CO) button / Group-CO (G- CO) button /
 Other-CO (O- CO) button

CALL FORWARDING FEATURES – SUMMARY

Description

Call Forwarding features enable an extension user to have their calls forwarded to a specified destination. The user may determine the conditions of how their calls will be forwarded. The following Call Forwarding features are available:

- Call Forwarding – All Calls**
- Call Forwarding – Busy/No Answer**
- Call Forwarding – Follow Me**
- Call Forwarding – to an Outside (CO) Line**

Call Forwarding – All Calls

Description

This feature is used when a user wants all their calls to be automatically re-directed to another extension.

Conditions

- The types of calls which are forwarded by this feature are:
 - Outside calls – DIL; DISA; Normal
 - Intercom calls – Extension; Transfer
- The extensions which have already been assigned as a forwarded destination cannot set the Call Forwarding feature.
- Although calls can be forwarded, Message Waiting cannot. The Message/Ringer Lamp will light on the original called extension.
- If the Do Not Disturb (DND) feature has already been set, setting the Call Forwarding feature will cancel DND.
- System Programming determines which extensions are able to perform this feature for certain outside calls.

Call Forwarding – Busy/No Answer

Description A user's calls are forwarded to another extension if their extension is busy or they do not answer the call within a pre-determined time.

- Conditions**
- The types of calls which are forwarded by this feature are:
Outside calls – DIL; DISA; Normal
Intercom calls – Extension; Transfer
 - The extensions which have been already assigned as the forwarded destination cannot set the Call Forwarding feature.
 - Although calls can be forwarded, Message Waiting cannot. The Message/Ringer Lamp will light on the original called extension.
 - If the Do Not Disturb (DND) feature has already been set, setting the Call Forwarding feature will cancel DND.
 - System Programming determines which extensions are able to perform this feature for certain outside calls.

Telephone Features

Call Forwarding — Follow Me

Call Forwarding – to an Outside (CO) Line

Description

Calls directed to an extension will be sent to an external destination. The outside telephone number must be pre-programmed.

Conditions

- The types of calls which are forwarded by this feature are:
Outside calls – DIL; DISA
Intercom calls – Extension; Transfer
- The forwarding extension's Toll Restriction and Account Code Entry requirements still apply.
- If the Do Not Disturb (DND) feature has already been set, setting the Call Forwarding feature will cancel DND.
- System programming determines which extensions are able to perform this feature.
- If a call between two outside parties is established by this feature, the duration of the call is determined by the system timer. An alarm tone is generated to both outside parties 15 seconds before the time-out. The call is disconnected at the time-out.

Call Hold – Intercom

Description

This is used to place an intercom call on hold. The held call can be retrieved by the user who held it or by any other extension.

Conditions

- Only one intercom call can be placed on hold (up to ten calls in the system – Call Park). With a proprietary telephone, outside calls and one intercom call can be placed on hold at the same time. With a single line telephone, either one outside or intercom call can be held.
- If a call on hold is not retrieved within a pre-assigned period of time, Hold Alarm/Hold Recall occurs.

Call Log, Incoming

Description

If display proprietary telephone (KX-TA30830) users cannot answer a call, the incoming outside call information from the Caller ID service is automatically logged in the system and the Caller ID Indication button indicator lights. Moreover, the user can call back the caller by checking the call log. There are two kinds of call log areas available in the system. One is the personal area, which stores call logs per telephone. The other is the common area, which stores call logs for the system. Up to 20 calls can be logged in each personal area and up to 300 calls in the common area.

The displayed information is as follows:

- The received outside (CO) line number and name
- The date and time the call was received

Conditions

- The user's area code must be assigned before they use the Caller ID feature.
- To check the caller's information stored in the personal area, the user needs to assign the Caller ID Indication — Personal button. For the common area, the Caller ID Indication — Common button is necessary.
- The call is registered when the PT finishes ringing. If a call is directed to a certain PT, the call will be registered in the PT's personal area and the PT's Caller ID Indication — Personal button indicator will light. A call via an outside (CO) line assigned "Normal" in programs [414]-[416] "Outside (CO) Line Mode — Day/Night/Lunch" or a call via the DISA Intercept Routing feature will be registered in the common area and all corresponding PT's Caller ID Indication — Common button indicators will light. However in this case, if nobody has assigned the Caller ID Indication — Common button, the call will be registered in a PT's personal area that is connected to the lowest jack number and the PT's Caller ID Indication — Personal button will light.
- After someone has checked the new call log in the common area, all corresponding Caller ID Indication — Common button indicators will turn off.
- Information is also registered even if a transferred call (unscreened) is not answered. In this case, the information will be stored in the transferred extension's personal area.
- When the call log in the personal area is full (20 calls are stored), the user can select how the 21st call is treated. Overwriting the data by replacing the oldest call with the newest one at their extension, or disregarding the 21st call can be selected (Default: Record the new call) (Call Log, Incoming). When the call log in the common area is full (300 calls are stored), only the operator or manager can select the 301st call treatment (Default: Record the new call) (The 301st Call Log, Incoming in the Common Area Treatment).

- A telephone user can lock their display so that the incoming call information stored in their personal area is not shown on the display. The operator or manager can cancel the lock. The call information stored in the common area can be locked and unlocked only by the operator and manager.
- The system automatically modifies the incoming caller's number, depending on programming, for local or long distance calls. The modified number will be recorded so it can be called back. Users can also modify the number manually.

<Example>

- [901] "Caller ID Area Code Assignment" : 201
- [902] "Caller ID Modification for Local Calls" :
delete – 3 digits, add – blank
- [903] "Caller ID Modification for Long Distance Calls" :
delete – 0 digit, add – 1

	Caller's number provided by CO	Recorded caller's number
Local call:	2011234567	1234567 (modified by [902])
Long distance call:	7149876543	17149876543 (modified by [903])

Call Park

Description	Allows an extension user to place a held call into a system parking area. This releases the user from the parked call to perform other operations. The parked call can be retrieved by any extension user.
Conditions	<ul style="list-style-type: none">• The system contains ten parking areas, each of which has its own call park number.• If a parked call is not retrieved within a pre-assigned period of time, Hold Alarm/Hold Recall occurs.• If a parked call is not retrieved in 30 minutes, it will be automatically disconnected.
Programming Reference	Section 4, System Programming [200] Hold Recall Time
Feature Reference	Section 3, Features Hold Alarm/Hold Recall
Operation Reference — User Manual	Telephone Features Call Park

Call Pickup, Directed

Description	Allows an extension user to answer a call ringing at any other extension.
Conditions	<ul style="list-style-type: none">• The user can pick up an incoming outside, intercom, or doorphone call.• A confirmation tone is sent to the user when the call is picked up. The tone can be disabled.• Hold recalls and camp on recalls cannot be picked up.
Programming Reference	Section 4, System Programming [117] Call Pickup Tone
Feature References	None
Operation Reference — User Manual	Telephone Features Call Pickup, Directed

Call Pickup, Group

Description Allows an extension user to answer a call that is ringing at another telephone, if the call is ringing within the user's extension group.

Conditions

- The user can pick up an incoming outside, intercom, or doorphone call.
- A confirmation tone is sent to the user when the call is picked up. The tone can be disabled.

Call Splitting

Description	Allows an extension user to alternate between two other parties. Placing the current call on hold allows the user to have a conversation with the other party.
Condition	<ul style="list-style-type: none">• Call Splitting is not possible during a Doorphone Call or Paging.
Programming References	No programming required.
Feature References	None
Operation Reference — User Manual	Telephone Features Call Splitting

CALL TRANSFER FEATURES – SUMMARY

Description

Call Transfer features allow a user to transfer a call to another party. This operation can be screened or unscreened. Screened call transfer is used when the user wants to announce the call to the other party before completing the transfer. Unscreened call transfer immediately releases the caller to the called party. An intercom or an outside call can be transferred to an extension or to an external party by the following.

Call Transfer, Screened – to Extension

Call Transfer, Screened – to an Outside (CO) Line

Call Transfer, Unscreened – to Extension

Call Transfer, Screened – to Extension

Description

Allows an extension user to voice-announce to the extension and transfer the call.

Condition

- If music on hold is enabled, music is sent to the caller while being transferred. Sending a cyclic tone or music on hold to the caller can be programmed by program [111].

Programming References

Telephone Features

Call Transfer — to Extension

Call Transfer, Screened – to an Outside (CO) Line

Description

Allows a proprietary telephone user to voice-announce to an external party and transfer the call.

Conditions

- System programming determines which extensions are able to perform this feature.
- A single line telephone user cannot transfer a received call to an external party.
- If a call between two external parties is established using this feature, the duration of the call is restricted by a system timer. Hold Alarm/Hold Recall is generated to the extension who transferred the call 50 seconds before the time-out. Also, an alarm tone is generated to both outside parties 15 seconds before the time-out. The call is disconnected at the time-out unless the extension rejoins the conversation.
- If music on hold is enabled, music is sent to the caller while being transferred. Sending a cyclic tone or music on hold to the caller can be programmed by program [111].

Call Transfer — to an Outside (CO) Line

Call Transfer, Unscreened – to Extension

Description

Allows a user to transfer an intercom or outside call directly to an extension party. After dialing the destination extension, the user waits for the ringback tone and replaces the handset.

Conditions

- If the destination party does not answer within the pre-determined time, the call will return to the user (Transfer Recall).
- This feature is possible when the destination is sending a ringback or busy tone. If the destination is busy, Camp-On Transfer occurs.
- The ringing signal pattern depends on the party being transferred: outside or extension call ringing.
- If music on hold is enabled, music is sent to the caller while being transferred. Sending a cyclic tone or music on hold to the caller is programmable by program [111].

Call Transfer — to Extension

Call Waiting

Description

During a conversation, a call waiting tone notifies the user that another incoming call is waiting. They can answer the second call by disconnecting or placing the current call on hold. The call waiting tone can be activated or deactivated by dialing the appropriate feature number.

Conditions

- A call waiting tone is generated when an outside call is received, or when an extension caller executes Busy Station Signaling, or when a doorphone call is received, if Call Waiting is enabled.
- Setting Data Line Security temporarily cancels Call Waiting which has been turned on by an extension user.
- For proprietary telephone users, two types of call waiting tones (Tone 1 and Tone 2) are provided for an incoming outside call and intercom call. A proprietary telephone user can select the desired type by station programming. As for a doorphone call, Tone 1 is used as a call waiting tone (not changeable).
- Tone 2 depends on the assignment in program [423] “Outside (CO) Line Ringing Pattern Selection” for outside (CO) lines and program [115] “Extension Ringing Pattern Selection” for intercom calls.

Caller ID

Description

Provides a display proprietary telephone user with the caller's information, such as their name and telephone number, on the outside (CO) line assigned to receive Caller ID service calls.

Conditions

- The outside (CO) lines where the Caller ID service is offered by a Central Office must be assigned.
- A display PT (KX-TA30830) user can record the caller information received by Caller ID (Call Log, Incoming feature).
- If the Caller ID service provides both the number and name, the user can select the initial display, number or name, by system programming.
- An assigned name in program [011] "System Speed Dialing Name Setting" will be displayed when the caller's telephone number matches one of System Speed Dialing numbers assigned in program [001] "System Speed Dialing Entry" and a Central Office does not provide the caller's name.
- If a Central Office provides a caller's name, the name from the Central Office will be displayed even when a name assigned in program [011] is effective.

Caller ID Call Waiting

Description

During a conversation, a call waiting tone offered by the Central Office informs the user that there is a call waiting. If the Caller ID service provides them with a caller's information, such as the name and telephone number, the new caller's information will be displayed (flashing) on their extension (KX-TA30830 only) during the assigned time. They can answer the second call by disconnecting the first call or placing it on hold.

Conditions

- The second caller information display timer can be programmed. If the user does not press the FLASH/RECALL button while the information is displayed (flashing), the display stops flashing. In this situation, the caller information is automatically recorded in the user's personal area and the user's Caller ID Indication — Personal button indicator lights if the call has been directed to the user. A call via an outside (CO) line assigned "Normal" in programs [414]-[416] "Outside (CO) Line Mode — Day/Night/Lunch" is automatically recorded in the common area and all corresponding user's Caller ID Indication — Common button indicators light. However in this case, if nobody has assigned the Caller ID Indication — Common button, the call information is recorded in an user's personal area that is connected to the lowest jack number and the user's Caller ID Indication — Personal button indicator lights.
- This feature is available during a conversation with an external party except for the following cases: (1) during a conference call, (2) while holding a call, (3) while transferring a call, and (4) during an outside-to-outside (CO-to-CO) line call.
- A contract with the Central Office may be required for the Call Waiting service. Consult the Central Office for details.

Calling Party Control (CPC) Signal Detection

Description

The Calling Party Control (CPC) Signal is an on-hook indication (disconnect signal) sent from the outside (CO) line when the telephone is hung up at the other end. To maintain efficient utilization of outside (CO) lines, the system monitors their state and when a CPC Signal is detected from a line, the system disconnects the line and alerts the extension with a reorder tone.

Conditions

- CPC Signal Detection is enabled or disabled for incoming and outgoing outside calls by system programming.
- Generally, CPC for Signal Detection works for incoming outside calls, and does not work for outgoing outside calls (except after they are placed on Call Hold or Exclusive Call Hold). In this case, if an extension user remains off-hook after an outgoing outside call is completed, the system will not release all the switches used to establish the connection. The connected outside (CO) line will continue to be in use. To prevent this, CPC Signal Detection can be programmed to work for outgoing outside calls.
- If a CPC Signal is detected during a Conference call, the line will be disconnected and the remaining two parties can resume their call.
- If a CPC Signal is detected during a call between a DISA caller and an extension or external party, the line will be disconnected.

Conference

Description

The system supports three-party conference calls, including external or internal parties. During a two-party conversation, the extension user can add a third party to their conversation, thereby establishing a conference.

Conditions

- Possible conference combinations are: 1-intercom and 2-outside calls; 2-intercom and 1-outside calls; and 3-intercom calls.
- A three-party call can also be established by Executive Busy Override.
- When a two-party call is changed to a three-party call or vice versa, a confirmation tone is sent to all three parties. The tone can be disabled.

 Conference

Conference, Unattended

Description

When a proprietary telephone user is in a conference with two external parties, the user can leave the conference to allow the other two parties to continue the conversation. This is called an Unattended Conference. The user may return to the conference, if desired.

Conditions

- An Unattended Conference can be established when the extension is allowed to transfer a call to an outside (CO) line.
- The duration of an unattended conference is restricted by a system timer. Hold Alarm/Hold Recall is enabled at the extension who left the conference 50 seconds before the time-out. An alarm tone is generated to both outside parties 15 seconds before the time-out. The call is disconnected at the time-out unless the extension rejoins the conversation.

Confirmation Tones

Description

When various features are completed, the system confirms the success of the operation by sending a confirmation tone to the extension user through the speaker of the telephone.

Confirmation tone 1:

- (a) Indicates that the new setting is different from the previous setting.
- (b) Sets or cancels Electronic Station Lockout.

Confirmation tone 2:

- (a) Indicates that the new setting is the same as the previous setting.
- (b) Also, sent when various features are successfully performed or accessed. (e.g., Call Hold, Automatic Callback Busy)

Confirmation tone 3:

Sent when a conversation is established just after dialing.
For example, when accessing the following features by their feature numbers:

- Conference
- Call Pickup
- Paging – External
- Paging Answer

This tone can be disabled by system programming so that the user can start talking immediately.

Confirmation tone 4:

Sent when changing a three-party call (created by Executive Busy Override or Conference) to a two-party call. This tone can be disabled by system programming.

**Condition**

- Confirmation Tones 1 and 2 are provided to reconfirm assigned features.

Programming References**Section 4, System Programming**

Data Line Security

Description

Data Line Security is a feature that can be set at individual extensions. Once set, communication between the extension and the other party is protected from signals such as Call Waiting, Hold Alarm/Hold Recall and Executive Busy Override. Data equipment or a facsimile may be connected to an extension jack so that the user can perform data communications. During communication, Data Line Security maintains secure data transmission against tones or interruptions from other extensions.

Conditions

None

Programming References

No programming required.

Data Line Security

Dial Tones, Distinctive

Description

Three types of dial tone patterns are available to give information about features activated on the telephone.

Dial tone 1: This is a normal dial tone. None of the features listed below are activated.

Dial tone 2: Sent when any one of the features below are set.

- Absent Message Capability
- Background Music (BGM) (for proprietary telephones only)
- Call Forwarding
- Call Pickup Deny
- Data Line Security
- Do Not Disturb (DND)
- Electronic Station Lockout
- Message Waiting (for proprietary telephones only)
- Pickup Dialing (for single line telephones only)
- Timed Reminder

Dial tone 3: Sent when performing Account Code Entry and sent when answering a Timed Reminder call.

Conditions

None

Programming References

No programming required.

Feature References

None

Operation References

Not applicable.

Dial Type Selection

Description

Allows an extension user to select the desired dialing mode for each outside (CO) line regardless of the originating extension (rotary or tone). There are three dialing modes available.

DTMF (Dual Tone Multi-Frequency) Mode

The dialing signal from an extension, either tone or rotary, is converted to tone dialing. DTMF signals are transmitted to the outside (CO) line.

Pulse Dial (Rotary) Mode

The dialing signal from an extension, either tone or rotary, is converted to rotary dialing. Rotary pulses are transmitted to the outside (CO) line.

Call Blocking Mode

Set this mode for outside (CO) lines that can receive both tone and rotary dialing, but are under contract with the Central Office for rotary dialing only. When dialing to a line using a touchtone telephone, only rotary dialing is sent to the Central Office.

Conditions

- Extension users can temporarily convert the pre-assigned rotary dialing mode to DTMF mode (Pulse to Tone Conversion). DTMF mode cannot be changed to rotary.
- Either DTMF or rotary dialing can be assigned for the DISA (Direct Inward System Access) outgoing line. With DISA, pulse to tone conversion is not possible.
- If an outside (CO) line can receive both DTMF and pulse signals and is contracted for DTMF with a Central Office, the DTMF mode should be selected for the line. If it is contracted for rotary mode, the Call Blocking mode should be selected for the line.
- If a line is assigned to the Pulse Dial mode, select an appropriate pulse speed, if necessary.
- After a held call is retrieved, the dial mode returns to the one originally programmed for the outside (CO) line.

Section 3, Features

End-to-End DTMF Signaling
(Tone Through)

Pulse to Tone Conversion

Operation References

Not applicable.

Direct In Lines (DIL)

Description

Enables an incoming outside call to go directly to one extension. DIL places an incoming outside call to only one extension. This outside (CO) line can be used by multiple extension users to make calls, but can only be used by one extension to receive calls. DIL can have different destinations for the day, night and lunch modes (Time Service).

Condition

- If the Station Hunting feature is assigned to the destination extension, the call will be hunted.

[414]–[416] Outside (CO) Line Mode — Day/Night/Lunch

Feature Reference

Section 3, Features
Station Hunting

Operation References

Not applicable.

Direct Inward System Access (DISA)

Description

Allows an outside caller to access specific system features after hearing a short beep as if the caller is an extension in the system. The caller can have direct access to features such as:

- Placing an incoming call to an extension, operator or ring group. The caller also has the option of dialing the route for an extension using a one digit number (DISA built-in auto attendant number) via DISA calls.
- Calling an external party.

One of the following must be selected to have direct access to these features: (1) None Security, (2) Trunk (Outside (CO) Line) Security, or (3) All Security. In None Security mode, any caller can make outside or intercom calls. In Trunk (Outside (CO) Line) Security mode, a pre-assigned DISA security code must be entered to make outside calls. In All Security mode, a pre-assigned DISA security code must be entered to make both outside and intercom calls. This prevents callers from making unauthorized calls. However, when making an outside call by Call Forwarding – to Outside (CO) Line, the call is allowed (exception).

Conditions

- The following items are required for the DISA feature.
 - “DISA1” must be assigned to outside (CO) line(s) as the outside (CO) line mode.
- After the DISA Delayed Answer Time expires and a ringback tone is returned to the caller, a DISA call will be answered. The caller can dial after the tone.
- This system can store up to ten programmable DISA built-in auto attendant numbers. Each number is one digit.
- The DISA built-in auto attendant number may be the same as the first digit of other numbers (extension number, etc.). To avoid confusion, the system waits for the second digit for a preprogrammed amount of time (default: 2 seconds). If the timer expires, the system will assume that the first digit is a DISA built-in auto attendant number.
- The DISA line can be used to originate outside calls if a security code (if required) has been dialed.
- This system can store up to four programmable DISA security codes. The number of digits of the codes can be programmed (default: 4 digits). Each code should be different.
- The duration of outside-to-outside (CO-to-CO) line calls can be limited. When the specified time expires, both lines are disconnected. A warning tone is sent to both parties 15 seconds before the time-limit.
- To detect the end of an outside-to-outside (CO-to-CO) line call, CPC Signal Detection can be assigned.

- If a wrong DISA security code is entered, three beeps will be heard. The call will be disconnected after three failed attempts.

Operation Reference — User Manual

Telephone Features

Direct Inward System Access (DISA)

When you enable the Outside – Outside Line Call feature of **Direct Inward System Access (DISA) function**, if a third party discovers the password (a DISA security code) of the system, you have a risk that they will make illegal phone calls using your telephone line, and the cost may be charged to your account.

In order to avoid this problem, we strongly recommend the following points:

- 1: Carefully maintain the secrecy of the password.
- 2: Specify a complicated password as long and random as you can make it.
- 3: Change the password frequently.

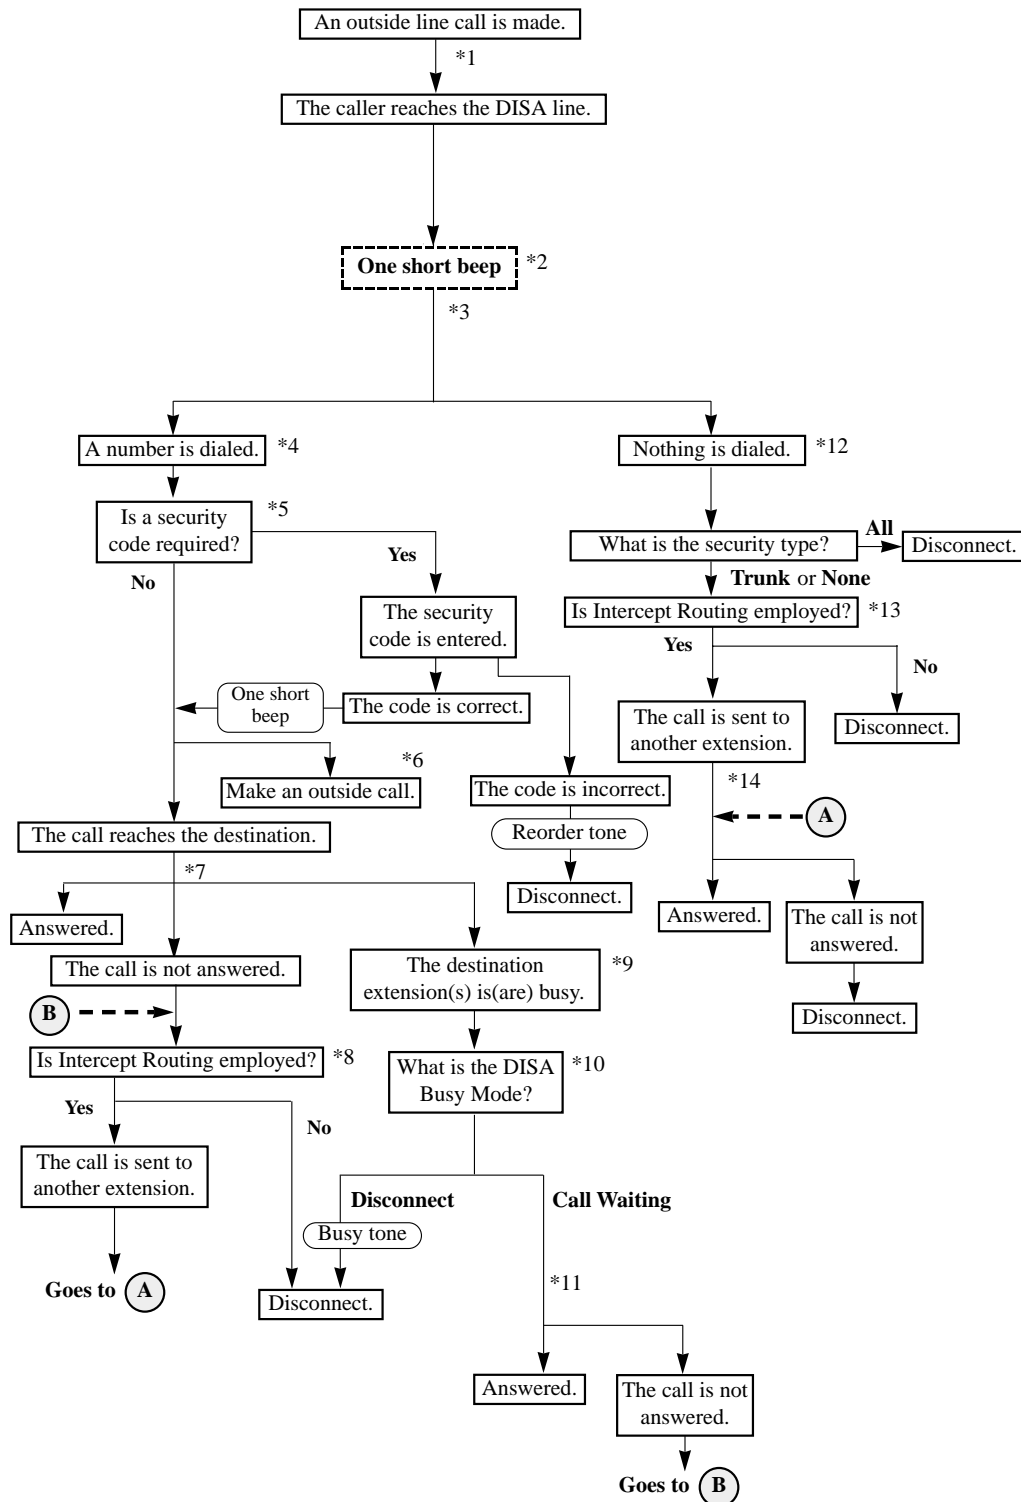

Condition

- The manager (jack number 01) can change the DISA security codes in program [512] “DISA Security Codes”, and change the number of digits of the DISA security codes in program [530] “DISA Security Codes Digits Selection” with their extension password.

Operation Reference — User Manual

Operator/Manager Service Features
 Manager Programming
 Extension Password Set (Manager only)

Flow chart of possible cases and results for DISA calls

-
- *1: The DISA Delayed Timer starts. This is the time between a call reaching the system and being received. The time is assigned in program [504] “DISA Delayed Answer Time”.
 - *2: When a call is received and the system answers, the system sends a short beep to the caller.
 - *3: The Intercept Timer for Internal DISA starts. This is the time the system waits for the number sent by the caller. If nothing is entered by the caller during this time, the system will regard it as “Nothing is dialed”. The time is assigned in program [515] “Intercept Time for Internal DISA”.
 - *4: The system can accept the following numbers:
 - **100 through 199** as an extension number.
 - **81 through 83** as an outside (CO) line group line access number.
 - **9** as an automatic line access number when “Without AA” is assigned in program [500] “DISA Incoming Dialing Mode Selection”. Even if “With AA” is assigned, 9 is regarded as the automatic line access number if nothing is assigned to “9” in program [501] “DISA Built-in Auto Attendant”.
 - **0** as the operator call number when the operator is assigned in program [008] “Operator Assignment” and “Without AA” is assigned in program [500] “DISA Incoming Dialing Mode Selection”. Even if “With AA” is assigned, 0 is regarded as the operator call number if nothing is assigned to “0” in program [501] “DISA Built-in Auto Attendant”.
 - **0 through 9** as a built-in auto attendant number when “With AA” is assigned in program [500] “DISA Incoming Dialing Mode Selection”. The DISA AA Wait timer starts after receiving the first 1-digit number. If the timer expires, the system will assume that the first digit is an AA number. The time is assigned in program [517] “DISA AA Wait Time”.
 - *5: A security code is necessary when program [511] “DISA Security Type” is assigned as follows.
 - **All Security** – the system waits for a security code dialed after “✱”. When the security code matches a code programmed in program [512] “DISA Security Codes”, the system accepts the numbers after the code.
 - **Trunk Security** – the caller can access an outside (CO) line if the security code matches a code programmed in program [512] “DISA Security Codes”. The caller can access other destinations without the security code.

If the entered number is the same as one of the security codes, a short beep is heard. The beep can be disabled in program [518] “DISA Tone Selection after the Security Code”. If the number is wrong, three beeps will be heard. The call will be disconnected after three failed attempts.
 - *6: The caller must enter the desired phone number after hearing a dial tone from the Central Office.
 - *7: The DISA Ring Timer Before Intercept starts. The destination telephone(s) will ring for the time programmed in program [508] “DISA Ringing Time before Intercept”.
 - *8: The system treats the call according to program [507] “DISA Intercept Mode” as follows.
 - **Disconnect** – the call is disconnected.
 - **Intercept** – the call is sent to the extensions programmed in programs [408]–[410] “Flexible Ringing Assignment — Day/Night/Lunch”.

If the call is still not answered within the time programmed in program [509] “DISA Ringing Time after Intercept”, it will be disconnected.
 - *9: If the destination extension belongs to a hunting group and all extensions in the group are busy, the system checks the DISA Busy Mode. If the destination is the Ring group, the DISA Busy Mode will not work for the call. The system regards the call as unanswered.
-

- *10: The DISA Busy Mode is selected in program [506] “DISA Busy Mode”. There are two modes as follows:
 - **Disconnect** – the caller hears a busy tone and the call is disconnected.
 - **Call Waiting** – the destination extension hears the call waiting tone if they have enabled Call Waiting.
- *11: The DISA Ring Timer Before Intercept starts. The destination telephone(s) will ring for the time programmed in program [508] “DISA Ringing Time before Intercept”.
- *12: After the Intercept Timer for Internal DISA expires, the system regards that nothing was dialed .
- *13: The system treats the call according to program [510] “DISA No Dial Mode” as follows.
 - **Disconnect** – the call is disconnected.
 - **Intercept** – the call is sent to the extensions programmed in programs [408]–[410] “Flexible Ringing Assignment — Day/Night/Lunch”. If all of the extensions are assigned to “Disable”, the call will be disconnected.
- *14: The DISA Ring Timer After Intercept starts. The destination telephone(s) will ring for the time programmed in program [509] “DISA Ringing Time after Intercept”. If the call is not answered during the programmed time, the call will be disconnected.

Display, Call Information

Description

A display proprietary telephone shows the user the following call information.

Extension number and name

These are shown when calling or when called by an extension user, during an established intercom call, and while on-hook.

Display example: **102: Smith**

Dialed telephone number

This is shown when dialing the telephone number.

Display example: **91234567890**

Number or name of the caller

These are shown if the Caller ID feature is available.

Display examples: **1234567890**

Panasonic

Call duration

This is shown during an established outside call. The display remains for five seconds after the call is finished.

Display example: **CO 2 0:02'28**

Conditions

- Extension numbers and names are programmable. If an extension name is not stored, only the extension number will be displayed.
- The display does not show the intercom call duration.
- The outgoing outside call duration starts when the programmable timer expires.

Display, in Idle

Description

A display proprietary telephone can display: (1) date and time, (2) date and day of the week, or (3) extension number and name. One of the following displays is displayed while on-hook. The user can change the display by pressing the * key.

Conditions

- Display example (12 H): Month, Day, Time (AM/PM)

Jan 1 11:20PM

Display example (24 H): Month, Day, Time

Jan 1 23:20

Display example: Month, Day, Year, Day of the week

Jan 1, 2003 Wed

Display example: Extension number and name

123:Tony Viola

- The current date and time are set by system programming or the operator/manager service features.
- The user can select how to show the present time, 12-hour format or 24-hour format, by system programming.

Display Examples

Display, Self-Extension Number

Description Allows a display proprietary telephone user to display his own jack number and extension number in the station programming mode.

Condition • Display example
 If the jack number is 02 and the extension number is 102:

Jack02<=>EXT102

Programming Reference

Feature References None

Operation References Not applicable.

Do Not Disturb (DND)

Description

Allows an extension user to appear busy to incoming outside or intercom calls. This can be set or canceled by the extension user.

Conditions

- If a proprietary telephone (PT) is not supplied with the FWD/DND button, it can be assigned to a flexible CO button.
- DND does not work for the following calls: hold recalls or the Timed Reminder alarm.
- A PT user in DND mode can answer a call by pressing the corresponding flashing button.
- An extension in DND mode can be called by other extension users who are allowed to override DND in program [609] “Do Not Disturb Override”.
- If the Call Forwarding feature has already been set, setting the DND feature will cancel Call Forwarding.

Door Opener

Description

Allows extension users to unlock the door for a visitor from their telephone. The door can be unlocked by extension users who have been programmed to enable this feature.

Conditions

- A user-supplied door opener must be installed to the door to be opened. Two door openers can be installed.
- The door opener will open the door even if a doorphone is not installed.
- The user can modify the door opener timer through system programming.

Feature References

Section 3, Features

Doorbell/Door Chime

Doorphone Call

Operation Reference — User Manual

Telephone Features

Door Opener

Doorbell/Door Chime

Description

Extension users can receive not only ringing but also chiming as a doorphone call by connecting a doorbell/door chime to the relay connected with a door opener, when a visitor presses a doorphone button. They can recognize which doorphone call is coming by assigning a chime pattern (8 patterns) to each doorphone. Also they can select the ringing way (Ring/Chime/Ring & Chime) for each doorphone.

Conditions

• <Example>

— Taking the example that a doorbell/door chime is connected to Relay 2.
When only an extension connected to jack 01 can receive a doorphone call, each setting is as follows:

Programming	Default	Change
[700]-[702] Doorphone Ringing Assignment — Day/Night/Lunch	All jacks: Enable	Jack 01: Enable Others: Disable
[703]-[705] Door Opener Assignment — Day/Night/Lunch	All jacks: Enable	Jack 01: Enable Others: Disable
[708] Doorphone Ringing Time	All doorphones: 15 s	All doorphones: 30 s
[710] Doorphone Ring/Chime Selection	All doorphones: Ring	All doorphones: Chime
[711] Doorphone Chime Assignment	All doorphones: Relay 2	All doorphones: Relay 2
[712] Doorphone Chime Pattern Selection	All doorphones: Pattern 1	Doorphone 1: Pattern 1 Doorphone 2: Pattern 2

When default values are changed as shown in the above table, the system behaves in the following way:

- When a visitor presses the button of Doorphone 1:
 - A doorbell/door chime, connected to Relay 2, chimes with Pattern 1.
 - Extension 101 does not ring by setting “Doorphone 1: Chime” in program [710].
 - The INTERCOM button of Extension 101 flashes for 30 seconds. (PT only)
 - During 30 seconds, the extension user can answer the doorphone call at Extension 101 by going off-hook. And then he or she can unlock Door Opener 1, connected to Relay 1, by pressing “5”.
 - While having another call, the displayed item flashes when the Call Waiting feature is programmed.

- To perform the combination of the doorphone/door opener and the doorbell/door chime, connect the wire of the doorbell/door chime to the relay other than the relays used for door openers. Refer to the program [710].

Doorphone Call

Description

If a visitor presses the doorphone button, pre-assigned extensions will be called. The extension who answers the call can talk to the visitor. Any extension user can call a doorphone. The doorphones are also used for the Room Monitor feature.

Conditions

- Two doorphones can be installed.
- The extensions which can receive calls from each doorphone during the day, night and lunch modes must be programmed.
- If an extension user does not answer an incoming doorphone call within a programmed period of time, the ringing will stop and be canceled.
- A programmed extension user can open the door from the telephone to let the visitor in (Door Opener). This requires a user-supplied door opener.
- An access tone can be programmed to be sent to the monitored doorphone before monitoring starts.
- The ringing tone from the doorphone call is programmable.
- Doorphone 1 and Doorphone 2 cannot receive calls simultaneously. When one is in use, an extension user cannot have a conversation with the other.

Electronic Station Lockout

Description

Allows an extension user to lock their station so that other users cannot make outgoing outside calls. Any 4-digit code can be used to lock the station. The same code is used to unlock it. The manager or operator can cancel this feature for all extensions.

Conditions

- Making intercom calls and receiving intercom or outside calls are permitted on the locked station.
- A toll restriction class can be assigned for this feature. Certain types of outgoing outside calls are permitted depending on the assigned toll restriction class.
- This feature will not block Emergency Calls. These calls are registered in [309] “Emergency Dial Number Set”.

End-to-End DTMF Signaling (Tone Through)

Description	DTMF signaling is required for access to special network services offered by some telephone companies. This system allows a proprietary telephone user to send DTMF signals to the line during a call in progress.
Conditions	<ul style="list-style-type: none">• If the line dial type is assigned to DTMF, the Tone Through mode is established automatically after the dialing sequence is finished and the call is established.• If the line dial type is assigned to pulse, the Tone Through mode is established after the dialing sequence is finished and the “*#” buttons are pressed (Pulse to Tone Conversion).

Executive Busy Override – Extension

Description

Allows a pre-assigned extension user to interrupt an existing extension call, either between two inside parties or an external and inside party, to establish a three-party conference call. Extension users can prevent this feature from being executed by another extension user (Executive Busy Override Deny).

Conditions

- System programming determines which extension users can perform Executive Busy Override.
- This feature will not work if the extension has set Executive Busy Override Deny or Data Line Security.
- When a three-party call is changed to a two-party call or vice versa, a confirmation tone is sent to all three parties. This tone can be disabled by system programming.

Extension Group

Description The system supports eight extension groups. Any member of an extension group can pick up a call directed to another group member (Group Call Pickup) or can make a voice announcement to another group member (Paging – Group). In addition, the Station Hunting feature can be enabled for each extension group. A DISA ring group is a specific extension group.

Condition • Each extension should belong to an extension group, but cannot belong to more than one group.

External Feature Access

Description

Allows an extension user to access the features of a host PBX or Central Office, such as Call Waiting, etc. This is performed by putting the current party on hold and sending a flash signal.

Conditions

- This feature is effective only during an outside call. However, if the FLASH feature (Disconnection signal) is activated by the user, this feature will not work.
- The flash time must be assigned as required by the host PBX or outside (CO) line.
- With a proprietary telephone, the FLASH/RECALL button is used to perform this feature . With a single line telephone, flashing the hookswitch and entering the feature number are used to perform this feature .
- During outside calls, a FLASH stored in System Speed Dialing, Personal Speed Dialing or One-Touch Dialing features as External Feature Access, not as a Flash.

Hands-free Operation

Hold Alarm/Hold Recall

Description

Prevents a call on hold from being kept waiting longer than a pre-determined time. If the timer expires, ringing or an alarm tone is generated as a reminder to the user who held the call. If the user is on-hook and their SP-PHONE/MONITOR button is off, the phone will ring. If the user is off-hook or in the hands-free mode when the timer expires, an alarm tone will be sent to the built-in speaker of a proprietary telephone (PT) or the handset receiver of a single line telephone at 15-second intervals.

Conditions

- Hold Recall and Hold Alarm can be disabled by programming.
- During hold recall, a display PT indicates the held party.
- An Alarm tone is sent as follows.

- While the Alarm tone is being sent, a display PT flashes the indication of the held party for five seconds at 15-second intervals in synch with the tone.
- This feature will not work if the extension has set Data Line Security.

Host PBX Access

Description

The system may be installed behind an existing host PBX. This is performed by connecting a line from the host to an outside (CO) line in the Advanced Hybrid System.

Conditions

- A Host PBX Access Code is required to access outside (CO) lines of the host PBX.
- A pause, if programmed, can be inserted between the user-dialed Host PBX Access Code and the digits which follow (Automatic Pause Insertion). Program the pause time required by the Host PBX for that outside (CO) line group.
- Access to the host PBX during a conversation is also possible (External Feature Access).

Intercept Routing

Description Provides automatic redirection of incoming outside calls via DISA. There are two types of Intercept Routing.

Condition

- The Intercept Routing feature works in the following cases.
 - (1) When nothing is dialed after the dial tone is sent to the caller.
 - (2) When the call is not answered within a programmed time. This is called Intercept Routing — No Answer (IRNA).

Intercom Calling

Description

Allows an extension user to call another extension user within the system.

Conditions

- Extension numbers are assigned to all extensions by system programming.
- Names can be given to extension numbers by system programming. An extension number and a name, if programmed, will be shown on the display PT during an intercom call.
- DSS buttons assigned to flexible buttons permit one-touch access to an extension and provide the Busy Lamp Field. The MESSAGE button has no LED (Light Emitting Diode) indicator.
- After dialing an extension number, the user will hear one of the following.
 - Ringback tone: indicates the other extension is being called.
 - Busy tone: indicates the other extension is busy.
 - Do Not Disturb tone: indicates the other extension has assigned DND.
- A proprietary telephone user can select one of the Intercom Alert modes, Voice Call or Tone Call. Voice Call informs the called party of an incoming call with the calling party's voice, while Tone Call uses a ring tone. The calling party can only switch the pre-set mode at the called extension, from Voice Call to Tone Call.

Limited Call Duration

Description	Limited Call Duration is a system programmable feature that disconnects an outside-to-outside (CO-to-CO) line call when a specific timer expires. A warning tone is sent to the caller 15 seconds before the time-limit.
Conditions	None
Programming Reference	Section 4, System Programming [205] Outside-to-Outside (CO-to-CO) Line Duration Time Limit
Feature References	Section 3, Features Call Forwarding – to an Outside (CO) Line Call Transfer, Screened – to an Outside (CO) Line Conference, Unattended Direct Inward System Access (DISA)
Operation References	Not applicable.

Line Access, Automatic

Description

Allows an extension user to dial the automatic line access number (9) and access an idle line from the assigned outside (CO) lines.

Conditions

- Each extension is subject to system programming items to access outside (CO) lines.
- This feature requires a CO button (S-CO, G-CO or O-CO) assignment on a proprietary telephone (PT). Dialing the line access code selects a CO button on a PT according to the priority.
S-CO > G-CO > O-CO (on a hunted outside (CO) line)
- If Idle Line Preference – Outgoing is set on the telephone, the user can access an idle line only by going off-hook.
- After an outside (CO) line is seized, the system waits for a programmed time before dialing.

Line Access, Outside (CO) Line Group

Description

Allows an extension user to access an outside (CO) line group. An idle line is selected from the outside (CO) line group. To specify an outside (CO) line group, dial the feature number (8) and the desired outside (CO) line group number (1 through 3). A proprietary telephone user can also specify an outside (CO) line group by pressing a Group-CO button.

Conditions

- An idle line is selected in sequence from the lines in the specified outside (CO) line group.
- Group-CO buttons must be programmed prior to use.
- If Idle Line Preference – Outgoing is set on the telephone, the user can access an idle line only by going off-hook.
- Each extension is subject to system programming items to access outside (CO) lines.
- After an outside (CO) line is seized, the system waits for a programmed time before dialing.

Line Preference – Incoming (No Line/Prime Line/Ringing Line)

Description

A proprietary telephone user can select the method used to answer incoming calls from the following three line preferences.

- (1) No Line Preference
No line is selected when the user goes off-hook. They must select a line to answer an incoming call.
- (2) Prime Line Preference
The user can assign a prime line beforehand and answer a call on that line, when multiple calls are received simultaneously.
- (3) Ringing Line Preference
When the user goes off-hook, they can answer a call ringing at their telephone.

Conditions

- Setting a new line preference feature will cancel the previous setting.
- If Prime Line Preference is selected and an incoming call arrives from a line other than the prime line, it cannot be answered just by going off-hook. The Prime Line should be assigned to a Single-CO button.
- If Ringing Line Preference is selected, going off-hook during the delay time will not answer a line programmed for “delayed ringing”.
- A single line telephone is always set to Ringing Line Preference and cannot be changed.

Receiving Calls

Line Preference – Outgoing (Idle Line/No Line/Prime Line)

Description

A proprietary telephone user can select a desired outgoing line preference to originate calls from the following three line preferences.

(1) Idle Line Preference:

When the user goes off-hook, they are connected to an idle line. An idle line is automatically selected from the pre-assigned lines.

(2) No Line Preference:

No line is selected when the user goes off-hook. They must select a line to make a call.

(3) Prime Line Preference:

When the user goes off-hook, they are connected to the pre-assigned line. Assign a prime line beforehand.

Conditions

- Setting a new line preference feature will cancel the previous setting.
- To set Prime Line Preference, select one prime line from the outside (CO) lines.
- The outside (CO) lines to be used must be programmed.
- To select Idle Line Preference, the outside (CO) lines available should be programmed. Also, the outside (CO) lines available for Automatic Line Access should be assigned.
- The user can override the Idle/Prime Line Preference temporarily to select a specific line. To select it, press the desired line access button (INTERCOM or CO button) before going off-hook or pressing the SP-PHONE/MONITOR button.

Basic Operation

Making Calls

Local Carrier-Based Voice Mail Service

Description

The system supports voice mail service, which is an answering system offered by the telephone company, to notify the called party of a message waiting. After subscription, the voice mail system can answer calls automatically instead of the PBX when the line is busy or calls are not answered, and callers can leave their messages in a mailbox provided by the telephone company.

The Message/Ringer Lamp will light red and the corresponding S-CO button will flash red moderately after the mailbox has received messages, on a Panasonic proprietary telephone (PT).

This feature is available only for PTs.

Conditions

- The system supports both the Stutter dial tone method and FSK method assigned on an outside (CO) line basis in program [435] “Local Carrier-Based Voice Mail Signaling Assignment”.
- The Message/Ringer Lamp lights red and the corresponding S-CO button flashes red moderately when a message has been recorded and stored in the mailbox of the telephone company. Going off-hook, pressing the flashing S-CO button (red, moderately) and then pressing the MESSAGE button allows a PT user to access the voice mail system and listen to the messages stored in the mailbox.
- The voice mail service access number can be up to 32 digits long, assigned on an outside (CO) line basis in program [436] “Local Carrier-Based Voice Mail Access Dial Assignment”. During this programming, pressing the INTERCOM (SECRET) button before and after any confidential parts of the number allows a PT user to prevent the display of all or part of a number. (Refer to Section 3 “Secret Dialing”).
- In program [437] “Extension Access to Local Carrier-Based Voice Mail Assignment”, the user can program which extensions can access the voice mail service on an outside (CO) line basis. More than one CO line can be assigned to one extension.
- When an outside (CO) line is set for “Stutter” in program [435] “Local Carrier-Based Voice Mail Signaling Assignment” and the user seizes the outside (CO) line, they will hear a stutter dial tone if a message is in their voice mail box. Approximately 5 seconds after the user hangs up one of the contracted outside (CO) lines, or approximately 3 minutes 46 seconds after the phone stops ringing, the PBX automatically seizes the line and checks if a message has been recorded. If a new message was recorded in the mailbox of the telephone company, the Message/Ringer Lamp lights red and the corresponding S-CO button flashes red moderately.
- If the voice mail service uses a stutter dial tone and the recorded message is over 3 minutes long, in some cases the Message/Ringer Lamp may not light and the corresponding S-CO button may not flash.
- A contract with the telephone company may be required for Local Carrier-Based Voice Mail Service. Consult the telephone company for details.

Lockout

Description

If one party in a conversation goes on-hook, both parties will be disconnected from the speech path automatically. This feature applies to extension and outside calls. A reorder tone is sent to the off-hook party before it is disconnected.

Condition

- For a single line telephone, if nothing is dialed within a certain period of time after the other party goes on-hook, a reorder tone will be sent to the single line telephone and then it will be disconnected from the speech path.

Programming References

No programming required.

Feature References

None

Lockout

Log-In/Log-Out

Description

Assigns an extension to join (log-in) or leave (log-out) a hunting or ring group. Extensions in log-out status will not receive calls by Station Hunting or ring group but will receive other calls, unlike the DND feature.

Conditions

- There should be at least one extension that is in log-in status.
- The lighting patterns and status of the Log-In/Log-Out button are shown below.

lighting pattern	Log-In/Log-Out button Status
Red On	Log-Out
Off	Log-In

Manager Extension

Description

The extension connected to Jack 01 becomes the system manager. This extension can perform system programming and the following manager services.

- Canceling the Call Log Lock in the Common Area
- Canceling the Call Log Lock in the Personal Area and Electronic Station Lockout
- Changing the Day/Night/Lunch mode manually
- Clearing the call logs in the common area
- Setting/Canceling/Confirming the Timed Reminder (Wake-up Call) remotely
- Setting the Date and Time
- Setting the extension passwords
- Setting the treatment of the 301st call log in the common area

Message Waiting

Description

The system supports the feature to notify the called party of a message waiting. A proprietary telephone user with a MESSAGE button, knows there is a message if the Message/Ringer Lamp lights red. Pressing the MESSAGE button allows the user to call back the party that called.

Conditions

- Canceling the message can be performed from the extension sending it or from the extension receiving it.
- Messages are always left at the original extension. They cannot be sent to a Call Forwarding or Station Hunting destination.

Message Waiting for Another Extension

Description

Allows a proprietary telephone user to be notified that there is a message waiting at another extension(s) by the red lit LED indicator on the Another Extension Message Waiting button on their own extension. Pressing the lit Another Extension Message Waiting button enables the user to call back the party that called.

Conditions

- System Programming determines which user can perform this feature.
- When the Message/Ringer Lamp on another extension lights red, the LED indicator on the Another Extension Message Waiting button also lights red.
- More than one Another Extension Message Waiting button can be assigned on one extension.
- After calling back all the called parties, the LED indicator on the Another Extension Message Waiting button on your extension and the Message/Ringer Lamp on another extension will go out simultaneously.
- The user can cancel all messages left at another extension by a feature number.
- The user can lock the Message Waiting for Another Extension feature so that another extension cannot check and/or clear messages left at the user's extension. The operator or manager can cancel the lock.

Mixed Station Capacities

Description	This system supports a wide range of telephone sets, not only Proprietary Telephones (PT) in the Advanced Hybrid System, but also single line rotary telephones (10 pps/20 pps, using dial pulse signals) and single line push-button dialing telephones (touch tone). The hybrid method used in this system allows any telephone to be connected to an extension modular jack without an adaptor.
Condition	<ul style="list-style-type: none">• If a telephone is replaced with another one, the previous stored data (such as button features) remains.
Connection Reference	Section 2, Installation 2.3.4 Extension Connection
Programming References	No programming required.
Feature References	None
Operation References	Not applicable.

Music on Hold

Description	While an external party is on hold, music is automatically activated.
Conditions	<ul style="list-style-type: none">• Operations such as Call Hold, Exclusive Call Hold or Call Transfer activate Music on Hold.• A user-supplied external music source, such as a radio, must be connected to the system. One external music source can be connected to the system.• A music source is used for Music on Hold and/or BGM. System programming may require enabling Music On Hold.

Operation References	Not applicable.

One-Touch Dialing

Description

One-Touch Dialing offers a proprietary telephone (PT) user one-touch access to a desired party or system feature. This is activated by storing an extension number, telephone number or a feature number (up to 24-digits) in an One-Touch Dialing button. The number of buttons available depends on the type of PT. One-Touch Dialing buttons can be programmed to flexible buttons.

Conditions

- An account code can be stored into an One-Touch Dialing button.
- Speed Dialing, One-Touch Dialing and manual dialing can be used at the same time.
- The user can store a number consisting of 25 digits or more by dividing it and storing it in two One-Touch Dialing buttons. In this case, the line access code should be stored in the first button.

One-Touch Transfer Using a DSS Button

Description

This feature, if programmed, allows the proprietary telephone user to hold an outside call and quickly transfer it to an extension. While talking to an external party, pressing a DSS button on a proprietary telephone provides automatic hold and transfer. There is no need to press the TRANSFER button. The extension starts ringing immediately.

Condition

- If “With Transfer” is assigned, the user transfers an outside call by pressing the TRANSFER button followed by the DSS button.

Outside (CO) Line Connection Assignment

Description	This allows a user to specify which outside (CO) lines are connected to their system. This prevents the user from calling a line which is not connected. When the user uses Automatic Line Access, an idle line is selected from the ones connected.
Conditions	<ul style="list-style-type: none">• If the user tries to make a call with a disconnected line, a reorder tone will sound to indicate that the line is out of use.• This is effective for all outgoing calls including DISA.
Programming Reference	Section 4, System Programming [400] Outside (CO) Line Connection Assignment
Feature References	None
Operation References	Not applicable.

Outside (CO) Line Connection Assignment – Outgoing

Description	Allows a user to assign an outside (CO) line used for outgoing calls. This feature is useful in preventing unauthorized toll calls.
Conditions	<ul style="list-style-type: none">• When an extension user tries to make an outside call on a disallowed outside (CO) line, a reorder tone is sent to indicate that the user cannot use that outside (CO) line.• Day, Night and Lunch Service are programmed individually. (Time Service)

Feature References	None
Operation References	Not applicable.

Outside (CO) Line Group

Description

Outside (CO) lines can be grouped into up to three outside (CO) line groups. This allows extensions to call outside parties without designating a specific outside (CO) line, since an outside (CO) line is automatically selected from the designated outside (CO) line group. All outside (CO) lines belong to an outside (CO) line group.

Condition

- Each outside (CO) line can only belong to one outside (CO) line group.

PAGING FEATURES – SUMMARY

Description

Paging allows a user to make a voice announcement to many people at the same time. Their message is announced over the built-in speakers of proprietary telephones and/or an external speaker (external pager). The paged person can answer the page from a nearby telephone. Making and answering a page is possible from either a proprietary or single line telephone. The user can page with a call on hold in order to transfer the call (Paging and Transfer). It is also possible to deny a page.

The paging features are classified as follows.

Paging – All

Paging – External

Paging – Group

Paging – All

Description

Allows the user to make a voice announcement from the speakers of proprietary telephones and external paging device (external pager).

Conditions

- A confirmation tone is sent to the extensions, when a page is sent or answered.
- A confirmation tone is sent to the external pager, before the voice announcement. The tone can be disabled.
- A ringing or busy extension cannot receive a page.

Paralleled Telephone

Description

Any analog proprietary telephone can be connected in parallel with single line devices, such as a single line telephone, facsimile and data terminal.

When a parallel connection is made, an extension user can make and answer a call using either telephone.

Conditions

- A proprietary telephone (PT) can perform normal operations even if program [610] is assigned to “Disable”.
- If one telephone goes off-hook while the other telephone is having a call, a three-party call will be established. If one user goes on-hook, the other user will continue with the call.
- When receiving a call, both the PT and the single line telephone will ring except when the PT is in the Hands-free Answerback mode.
- When the single line telephone is operating, the display and LED indicator on the paired PT will work as if the PT is in operation.
- The extension user cannot originate a call from the single line telephone if the PT is:
 - playing BGM,
 - in programming mode, or
 - receiving a page announcement over the built-in speaker.
- The Call Waiting tone can only be heard by a PT.
- The paired single line telephone will not ring in the following cases.
 - When the PT user sets the Hands-free Answerback feature.
 - When the voice alerting mode is set on the PT
 - When calling an extension from a doorphone.
- The paired single line telephone cannot use the following features.
 - Call Splitting
 - Caller ID Call Waiting
 - Conference
 - Door Opener while talking to the doorphone
 - External Feature Access
 - Pickup Dialing
- The paired single line telephone user should not enter “49” before the account code. They cannot enter the account code during or after a call.

Pause Insertion, Automatic

Description

This feature is used to insert a pre-assigned pause between the outside (CO) line access number, the host PBX code, carrier code or code assigned in program [311] and the dialed number.

Conditions

- This feature requires programming the host PBX codes, carrier codes and automatic pause insertion codes as well as the pause duration beforehand.
- This feature works for Speed Dialing, One-Touch Dialing, Last Number Redial, Saved Number Redial, Pickup Dialing, Call Forwarding – to Outside (CO) Line as well as for normal calls.
- Pressing the PAUSE button in a dialing number inserts a pause for a pre-assigned time.

Personal Speed Dialing

Description

Allows an extension user to store frequently dialed numbers in order to place a call quickly. This is done by dialing the feature number and a speed dial number, from 0 to 9. Up to 10 numbers with a maximum of 24 digits per number can be stored in each telephone.

Conditions

- If a single line telephone user wants to check the stored number, exchange the single line telephone with a display proprietary telephone. The display PT user can check the stored numbers by pressing the feature number.
- A rotary telephone user cannot use this feature.

Programming References

No programming required.

Personal Speed Dialing

Pickup Dialing

Description

Allows a single line telephone user to make an outgoing call by going off-hook, if the user has stored the telephone number beforehand. This feature is also known as Hot Line.

Conditions

- A proprietary telephone and rotary telephone cannot program this feature.
- The user uses a feature number to activate or deactivate pickup dialing.
- If the feature is activated and the user goes off-hook, a dial tone will be generated for the delay time and then dialing will start. During the delay time, the user can dial another party overriding the Pickup Dialing feature.

Power Failure Transfer

Description

If a power failure occurs, a specific extension telephone is automatically connected to a specific outside (CO) line. This provides an outside (CO) line call between the following extension and outside (CO) line.

Outside (CO) line 1 is connected to extension jack number 01. A single line telephone can work during a power failure. Connect a single line telephone to extension jack number 01.

Conditions

- All other conversations, except the above combinations, are disconnected during a power failure.
- Only an outside (CO) line can have a conversation. All other features do not work.

Pulse to Tone Conversion

Description

This feature allows the extension user to change from pulse dialing to tone (DTMF) dialing so that the user can access special services, such as computer telephone services or Voice Mail, which require tones.

Conditions

- This feature only works for outside (CO) lines which have set the Pulse Dialing mode or Call Blocking mode.
- The user can select the dial mode for each outside (CO) line using the Dial Type Selection feature.
- Changing from tone to pulse is not possible.

Operation References	Not applicable.

Ringing Pattern Selection for Intercom Calls and Outside (CO) Lines

Description

Allows an extension user to select the desired ringing pattern for an intercom call and each outside (CO) line. This distinguishes incoming outside calls from intercom calls.

Conditions

- There are three ringing patterns available. One of them can be assigned to an intercom call and an outside (CO) line. Available ringing patterns are as follows.

- Each extension user can disable the outside (CO) line ringing tone by station programming.

Ringing Tone Selection for Doorphones

Description

Allows an extension user to select the desired ringing tone or chiming pattern for each doorphone. This distinguishes incoming doorphone calls.

A PT user will hear a tone with the assigned pattern and a single line telephone user will hear a ringing tone with the assigned pattern.

Conditions

- There are four types of ringing tones as follows.

- There are eight types of chiming tones as follows.

* The chime pattern occurs only once during the doorphone ringing time.

Secret Dialing

Description

Allows an extension user to conceal all or part of a registered telephone number that normally appears on the display. The user can hide System Speed Dialing or One-Touch Dialing numbers assigned to flexible buttons on proprietary telephones. When a display telephone user calls a Secret Dialing number, all or part of the number will not appear on the display.

Conditions

- When storing a number, press the INTERCOM button at the beginning and the end of the number to be concealed.
- The user can conceal one or more parts of a telephone number.
- Printing out the concealed parts on an SMDR can be assigned by system programming.

Station Hunting

Description

If a called extension is busy, Station Hunting redirects the incoming call to an idle extension in the extension group. Idle extensions are automatically searched according to programming. Two hunting types are available as follows.

Circular hunting: The extensions are searched one time in numerical order until an idle one is found. If all extensions are busy, a busy tone will be heard. If the calling outside (CO) line is assigned to DIL and all hunting group extensions are busy, the call will be forwarded within the group until an extension becomes idle.

Terminate hunting: The extensions are searched from the destination jack until the call reaches the highest jack number in the group. If all higher number jacks are busy, the search will end and a busy tone will be heard. If the calling outside (CO) line is assigned to DIL and all hunting group extensions are busy, the call will be forwarded within the group until an extension becomes idle.

One hunting type can be selected for each extension group. To leave the hunting group temporarily, use the Log-Out function. To rejoin, use the Log-In feature.

Condition

- If the called extension has set Do Not Disturb, Call Forwarding or Log-Out, Station Hunting will skip the extension. However, Station Hunting will not skip the extension which receives the call first, even if it has set Do Not Disturb or Call Forwarding.

Station Message Detail Recording (SMDR)

Description

Station Message Detail Recording (SMDR) automatically prints out detailed call information of outside calls. A printer connected to the Serial Interface (RS-232C) port can be used to print incoming and outgoing outside calls, as well as print a hard copy of system programming. To print out the record of system programming items that have been assigned, use program [804] "System Data Dump". To print the call records, use program [802] "Incoming/Outgoing Call Selection for Printing", which allows a user to print out the following records.

- A record of all outgoing outside calls or outgoing toll calls
- A record of all incoming outside calls

An example of a printed call record:

Date	Time	Ext.	CO	Dial number	Duration	Code
12/31/98	12:52PM	103	03	12345678901234567890123456789012	00:00'16

.
.
.
(1)	(2)	(3)	(4)	(5)	(6)	(7)

Example of the SMDR printout format:

Explanation

- (1) Date: shows the date of the call as month/day/year.
- (2) Time: shows the time the call was started as Hour: Minute/AM or PM. "*" indicates a transferred call.
- (3) Ext.: shows the extension number, etc. that engaged in the call. "C-xx" indicates an outside-to-outside (CO-to-CO) call via DISA. The outside (CO) line which receives an incoming call is shown as xx.
- (4) CO: shows the outside (CO) line number used for the call.

(5) Dial number

Outgoing call: shows the called party's telephone number (maximum 32 digits). Valid digits are 0 through 9, * or #.

Received call: shows <incoming>. If a Caller ID is assigned to the other party, it will show <incoming> and the number.

An incoming call via DISA is shown as <DISA incoming>.

An incoming call via DIL is shown as <DIL incoming>.

(6) Duration: shows the duration of the call in
hours/minutes/seconds.(7) Code: shows the account code appended to the call, account
code index number, the extension number which
overrides toll restriction or the DISA security code
status. Code "0" indicates a DISA incoming call
without a DISA security code. Codes "1 to 4"
indicate a DISA incoming call with DISA security
code 01 to 04 respectively. DISA security codes are
never printed out by SMDR.**Conditions**

- This system can store information of up to 64 calls.
- This data is not deleted when the user resets the system.
- If FLASH is manually sent during a conversation to make another call without hanging up, etc., the call record will be printed out and a new record is started. "F/" will be printed at the top of the dial number on the new record.
- When a host PBX code is entered, "=" will be printed between the code and dialed number.

Feature References	None
Operation References	Not applicable.

System Speed Dialing

Description

This feature supports 100 abbreviated dial numbers that are available to all users. A system speed dial number is dialed out by pressing the AUTO DIAL/STORE button for a proprietary telephone and pressing “*” for a single line telephone, and a 2-digit code (00 through 99). Up to one hundred telephone numbers (32-digit) can be stored per system.

Conditions

- Toll Restriction for System Speed Dialing can be assigned by system programming.
 - Rotary single line telephones cannot use the feature.
- [For proprietary telephone users only]**
- Speed Dialing, One-Touch Dialing and manual dialing can be used together.

Time (Day/Night/Lunch) Service

Description

The system supports the day, night and lunch operation modes. The system operation for originating and receiving calls can be different for the day, night and lunch modes. The system operation for restricting toll calls can be programmed to prevent unauthorized toll calls in each mode.

Changing the Day/Night/Lunch Modes

The day/night/lunch modes can be changed either automatically at a pre-assigned time or manually by the operator or manager at any desired time.

Automatic Time Service: If a user selects the automatic changing mode, the system will change the day/night/lunch modes at the programmed time each day. The starting time of the day/night/lunch modes can be set for each day of the week.

Manual Time Service: If a user selects the manual changing mode, the operator or manager can change the day/night/lunch modes by dialing the feature number.

Conditions

- The following programming items may be assigned differently for the day mode, night mode and lunch mode.
 - [405]–[407] Flexible Outward Dialing Assignment — Day/Night/Lunch
 - [408]–[410] Flexible Ringing Assignment — Day/Night/Lunch
 - [411]–[413] Delayed Ringing Assignment — Day/Night/Lunch
 - [414]–[416] Outside (CO) Line Mode — Day/Night/Lunch
 - [601]–[603] TRS – Class of Service (COS) Assignment — Day/Night/Lunch
 - [700]–[702] Doorphone Ringing Assignment — Day/Night/Lunch
 - [703]–[705] Door Opener Assignment — Day/Night/Lunch
- The operator or manager can change the day, night or lunch mode even if the automatic changing mode is selected.

Timed Reminder

Description

Each telephone can generate an alarm tone at a preset time as a wake-up tone or reminder. The alarm can be set to occur daily or just once.

Conditions

- Be sure that the system clock is working.
- Setting a new time clears the preset time.
- The alarm sounds for 30 seconds. To stop it, lift the handset or, with a proprietary telephone, press any button.
- There is no limit for the number of the extensions who can set Timed Reminder at the same time.

Programming References

No programming required.

Feature Reference

Toll Restriction

Description

Toll Restriction is a system programmable feature that can prohibit certain extension users from placing unauthorized toll calls.

Every extension is programmed to belong to one of five TRS – Classes of Service (COS). Each Class of Service is programmed to have a toll restriction class for the day mode, night mode and lunch mode.

There are five toll restriction COS numbers available. Toll restriction COS number 1 is the highest class and COS number 5 is the lowest. COS number 1 allows all toll calls. COS numbers 2 through 5 are used to restrict calls by combining pre-programmed deny and excepted codes.

Denied Code Classes

An outgoing outside call made by an extension with a toll restriction COS number between 2 and 5 is first checked against the assigned Denied Code Classes. If the first digits of the dialed number (not including the line access code) are not found in the class, the call can be made. There are five system programs for Denied Code Classes: **[302]–[305] Toll Restriction — Class 2 – 5 Denied Codes**. Each program is used to assign denied codes for Classes 2 through 5 respectively.

Each class can store up to 20 denied codes, each consisting of eleven digits.

Excepted Codes

These codes are used to override a programmed denied code. A call denied by the Denied Codes is checked against the selected Excepted Codes. If a match is found, the call can be made.

There is one system program for excepted codes: **[306] Toll Restriction — Exception Codes**. Up to eighty excepted codes, each consisting of eleven digits, can be stored. The number of codes available depends on the COS number.

Applicable Denied Code Classes and Excepted Codes depend on the assigned toll restriction COS number of an extension as follows.

COS Number	Denied Codes	Excepted Codes
1	None	None
2	Codes for Class 2	All codes from Code number 01 to 80
3	Codes for Classes 2 and 3	60 codes from Code number 01 to 60
4	Codes for Classes 2 to 4	40 codes from Code number 01 to 40
5	Codes for Classes 2 to 5	20 codes from Code number 01 to 20

[Explanation]

COS 1: allows all calls.

COS 2: denies the 20 codes stored in Denied Code Class 2 assigned in program [302], except all codes stored in Code numbers 01 through 80 assigned in program [306].

COS 3: denies the 40 codes stored in Denied Code Classes 2 and 3 assigned in programs [302] and [303], except the 60 codes stored in Code numbers 01 through 60 assigned in program [306].

COS 4: denies the 60 codes stored in Denied Code Classes 2 through 4 assigned in programs [302] through [304], except the 40 codes stored in Code numbers 01 through 40 assigned in program [306].

COS 5: denies the 80 codes stored in Denied Code Classes 2 through 5 assigned in programs [302] through [305], except the 20 codes stored in Code numbers 01 through 20 assigned in program [306].

Example of Toll Restriction programming

Here is an example to explain the procedure for Toll Restriction programming.

1. Determining the application

Determine the dialing numbers that should be denied for COS numbers 2 through 5. (1 is fixed and does not require programming.)

[Entry Example]

COS number	Denied Codes	Excepted Codes
2	Class 2 011xxxxxxx 976xxxxxxx 1xxx976xxxx	0112xxxxxxx 9762xxxxxxx 1xx8976xxxx 9824xxxxxxx 123x975xxxx 092xxxxxxx x01xxxxxxx x12xxxxxxx x123xxxxxxx 4112xxxxxxx 12xx555xxxx
	----- Class 3 982xxxxxxx 12xx975xxxx	0112xxxxxxx 9762xxxxxxx 1xx8976xxxx 9824xxxxxxx 123x975xxxx 092xxxxxxx x01xxxxxxx x12xxxxxxx x123xxxxxxx 4112xxxxxxx 12xx555xxxx
4	Class 2 011xxxxxxx 976xxxxxxx 1xxx976xxxx	0112xxxxxxx 9762xxxxxxx 1xx8976xxxx 9824xxxxxxx 123x975xxxx 092xxxxxxx x01xxxxxxx x12xxxxxxx x123xxxxxxx 4112xxxxxxx
	----- Class 3 982xxxxxxx 12xx975xxxx	0112xxxxxxx 9762xxxxxxx 1xx8976xxxx 9824xxxxxxx 123x975xxxx 092xxxxxxx x01xxxxxxx x12xxxxxxx x123xxxxxxx 4112xxxxxxx
	----- Class 4 0xxxxxxx x0xxxxxxx x1xxxxxxx	0112xxxxxxx 9762xxxxxxx 1xx8976xxxx 9824xxxxxxx 123x975xxxx 092xxxxxxx x01xxxxxxx x12xxxxxxx x123xxxxxxx 4112xxxxxxx
5	Class 2 011xxxxxxx 976xxxxxxx 1xxx976xxxx	0112xxxxxxx 9762xxxxxxx 1xx8976xxxx 9824xxxxxxx 123x975xxxx
	----- Class 3 982xxxxxxx 12xx975xxxx	0112xxxxxxx 9762xxxxxxx 1xx8976xxxx 9824xxxxxxx 123x975xxxx
	----- Class 4 0xxxxxxx x0xxxxxxx x1xxxxxxx	0112xxxxxxx 9762xxxxxxx 1xx8976xxxx 9824xxxxxxx 123x975xxxx
	----- Class 5 411xxxxxxx 1xxx555xxxx	0112xxxxxxx 9762xxxxxxx 1xx8976xxxx 9824xxxxxxx 123x975xxxx

Note: “x” means a digit.

2. Programming

[601]–[603] TRS – Class of Service (COS) Assignment

— Day/Night/Lunch

Assign a Class of Service (COS) to each extension.

[Example]

Jack	COS (Day)	COS (Night)	COS (Lunch)
01	1	1	1
02	1	5	1
03	2	4	5
:	:	:	:
08	5	5	5

[Explanation]

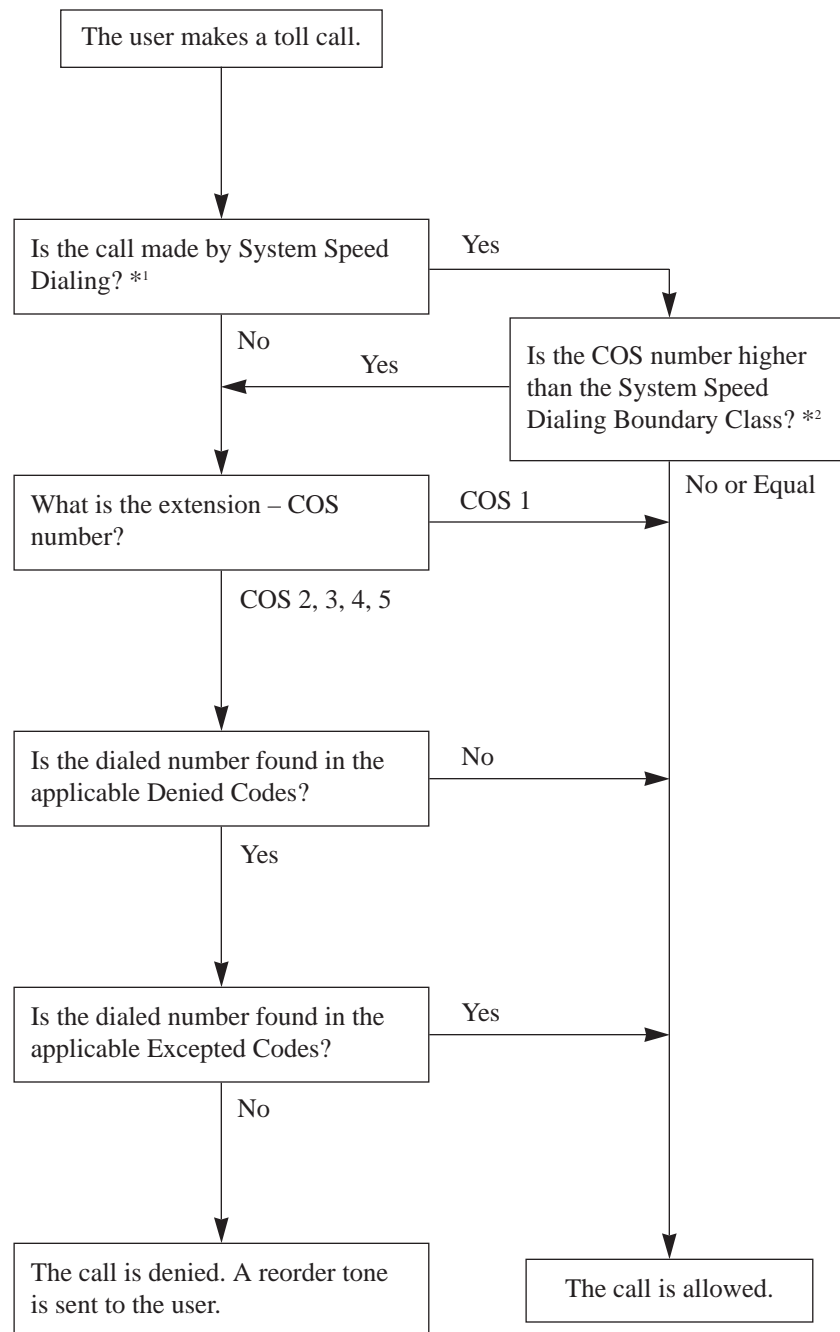

If your extension is jack 03;

- a) You cannot make a call whose toll call number is “011”, because the number “011” is one of the Denied Codes for Class 2.
- b) However, you can make a call whose toll call number is “0112”. The number, whose first 3 digits are “011”, is one of the Denied Codes for Class 2, but the number “0112” is one of the Excepted Codes. The Excepted Codes override the Denied Codes.

If your extension is jack 08;

- a) You cannot make a call whose toll call number is “1234976”, because the number “1xxx976xxx” is one of the Denied Codes for Class 2.
- b) However, you can make a call whose toll call number is “1234975680”. The number, whose first 7 digits are “1234975”, is one of the Denied Codes for Class 3, but the number “123x975xxx” is one of the Excepted Codes. The Excepted Codes override the Denied Codes.

Flow Chart of Toll Restriction

*1 System Speed Dial numbers are assigned in program [001] “System Speed Dialing Entry”.

*2 The System Speed Dialing Boundary Class is assigned in program [301] “Toll Restriction — System Speed Dialing Boundary Class”.

Conditions**WARNING**

The software contained in the TRS feature to allow user access to the network must be upgraded to recognize newly established network area codes and exchange codes as they are placed into service. Failure to upgrade the premises PBXs or peripheral equipment to recognize the new codes as they are established will restrict the customer and the customer's employees from gaining access to the network and to these codes.

KEEP THE SOFTWARE UP-TO-DATE WITH THE LATEST DATA.

- Toll restriction checks are applied to the following features.
 - (1) Account Code Entry
 - (2) Dial Access, Automatic
 - (3) Dial Access, Outside (CO) Line Group
 - (4) Line Access, Individual
 - (5) Carrier Code Entry
 - (6) System Speed Dialing
- Emergency numbers, such as telephone numbers for the police or fire department, should be stored in program [309] "Emergency Dial Number Set" so that they will not be barred by toll restriction.
- If a stored Host PBX access code or a stored carrier code is found in the dialed number, the subsequent telephone numbers will be checked for toll restriction.
- It is programmable whether the "×" or "#" the user dials is to be checked or not on the Toll Restriction code. This is useful to prevent unauthorized calls which could be possible through certain Central Office exchange systems.

Programming References**Section 4, System Programming**

Operation References

Not applicable.

Toll Restriction for Special Carrier Access

Description	If the system has access to multiple telephone companies, access to a specific company requires a carrier code before the telephone number. Toll Restriction for these calls is activated by storing the carrier codes (maximum 20). If a stored carrier code is found in the dialed number, a toll restriction check starts with the subsequent telephone numbers.
Conditions	None
Programming Reference	Section 4, System Programming [300] Carrier Code Assignment
Feature Reference	Section 3, Features Toll Restriction
Operation References	Not applicable.

Toll Restriction for System Speed Dialing

Description

Toll Restriction for System Speed Dialing is assigned separately from the extensions. There are five boundary classes available.

Extension COS number	System Speed Dialing Boundary Class				
	1	2	3	4	5
1	N	N	N	N	N
2	C	N	N	N	N
3	C	C	N	N	N
4	C	C	C	N	N
5	C	C	C	C	N

N = No restriction C = Checked

[Explanation]

The System Speed Dialing Boundary Class works with the COS number assigned to each extension.

- (1) Boundary Class 5: all extension users can make system speed dialing calls without checking any COS number.
- (2) Boundary Class 4: extensions with COS number 5 are checked. When the users make system speed dialing calls, toll restriction COS number 5 is applied to the numbers.
- (3) Boundary Class 3: extensions with COS numbers 4 and 5 are checked. When the users make system speed dialing calls, toll restriction COS numbers 4 and 5 are applied to the numbers.
- (4) Boundary Class 2: extensions with COS numbers 3 through 5 are checked. When the users make system speed dialing calls, toll restriction COS numbers 3 through 5 are applied to the numbers.
- (5) Boundary Class 1: extensions with COS numbers 2 through 5 are checked. When the users make system speed dialing calls, toll restriction COS numbers 2 through 5 are applied to the numbers.

Toll Restriction Override – Toll Restriction for System Speed Dialing

Toll Restriction Override by Account Codes

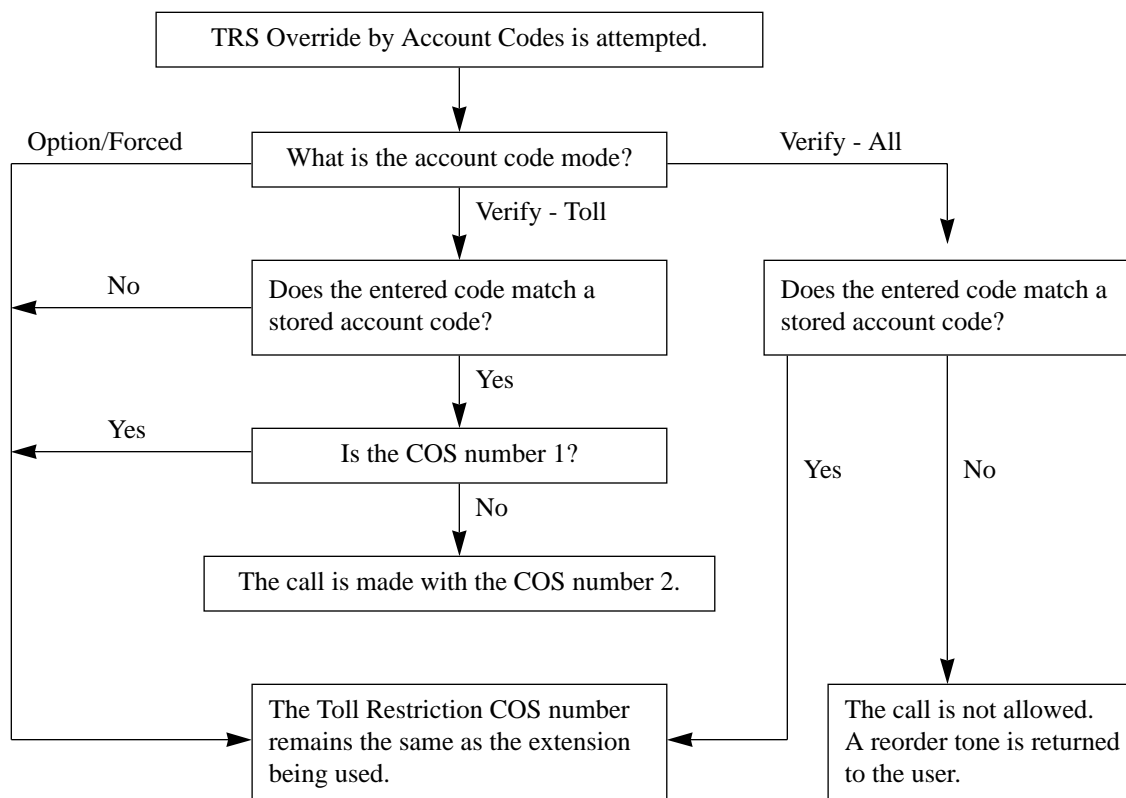

Description

Allows an extension user to override toll restriction temporarily to make a toll call from a toll-restricted extension. The user can carry out this feature by entering a pre-assigned account code before dialing the telephone number. The user can make a toll call with the COS number 2.

Conditions

- The account code “Verify - Toll” mode at an extension permits users to override their toll restrictions.
- This feature can be used on extensions assigned to toll restriction COS numbers 3 through 5. The COS numbers 1 and 2 will not be changed.
- If the user does not enter an account code or enters an invalid one, a regular toll restriction check is done.
- When a user makes a call using this feature, it will appear on the SMDR printout with either the entered 4-digit account code or the 2-digit index of the entered account code. This selection is set in program [805] “SMDR Account Code Selection”.
- Users can also override toll restriction of another extension by using the Walking COS feature.

Toll Restriction — Station Lock Boundary Class

Description

Allows assigning a toll restriction class when the Electronic Station Lockout feature is set.

An extension user usually cannot make an outside call at a locked extension, however if a toll restriction class is assigned in program [312], the user can make an outside call at the locked extension.

Condition

- The more restrictive toll restriction COS number will take precedence. For example, if toll restriction COS number 3 is assigned to an extension and the station lock boundary class is 4, the extension user is allowed to make a call with toll restriction COS 4.

Volume Control – Handset Receiver/Headset/Ringer/Speaker

Description

Allows a proprietary telephone user to change the following as desired.

Handset receiver volume
Headset volume
Ringer volume
Speaker volume

Condition

- The procedure is as follows.

Slide the following lever or press UP and DOWN of the Navigator or Volume key, The Ringer Volume selector is located on the left side of the telephone.

Handset volume: Navigator Key/Volume Key (1-3 level)
Headset volume: Navigator Key (1-3 level)
Ringer volume: Ringer Volume Selector (OFF/LOW/HIGH)
Speaker volume: Navigator Key/Volume Key (1-12 level)

Walking COS

Description

Allows a user who is not at their own telephone to override the toll restriction COS number of another extension. At the other extension, the user dials their extension password. For the duration of the call, the COS of the extension is changed to the COS of their own extension.

Condition

- When a user makes a call using this feature, the user's extension number will be displayed on the SMDR, not the extension where the user made the call.

4.1 General Programming Instructions

Default Setting

This system has factory default settings. If any of the programming needs to be changed, the necessary information will be found in Section 3, “Features”. This makes the system very simple to install and customize as required by the customer. Any required changes can be written in the “Programming Tables”.

Required Telephone Set

The following telephone set is required for system programming.

- Proprietary Telephone (PT): KX-TA30830

Extensions Used for Programming

Only the manager extension can perform system programming. The extension user connected to Jack number 01 is the manager extension.

4.1.1 Using Proprietary Telephones

Using the Overlay

A programming overlay is packed with the telephone at the factory. This overlay should be used at all times during programming. The features of the telephone keys change during programming as follows. (The original features are in parentheses.)

During Normal Operation

(PAUSE)
(SP-PHONE)/ ▼
(REDIAL)/ ▲
(AUTO ANSWER/MUTE)
(FLASH/RECALL)
(TRANSFER)
(FWD/DND)/ ►
(CONF)/ ◄
(INTERCOM)
(AUTO DIAL/STORE)
(HOLD)
(PROGRAM)

During Programming

PAUSE
NEXT
PREV (PREVIOUS)
SELECT
FLASH
CLEAR
►
◄ , -
SECRET
STORE
END
PROGRAM

Location of Controls with the Overlay

The picture below shows the feature of the buttons of the KX-TA30830 during programming.

KX-TA30830

4.1.1 Using Proprietary Telephones

Viewing the Display

The display gives the user helpful information, such as the next step, previous entries, etc.

The KX-TA30830 utilizes one information line for programming. The display capacity is 16 digits. If the entry is longer than 16 digits, the user can shift the display by pressing the  or  button.

Before entering the programming mode

Before entering the programming mode, confirm that:

- The telephone is on-hook.
- No calls are on hold at your telephone.

Entering the programming mode

1. Press the PROGRAM button.
The display shows: PITS-PGM NO? →
2. Dial * #.
The display shows: Password:
3. Enter the **system password** (default 1234).
The display shows the initial system programming message: SYS-PGM NO? →

Note

- The entered system password is not shown on the display. The system password can be changed by system programming. Refer to Section 4.2 [002] “System Password”.
- During the programming mode, the extension is treated as a busy extension.

4.1.2 Programming Methods

Advancing to the next stage

When “SYS-PGM NO? →” is displayed, the user can go to the desired program by entering the 3-digit program address.

Storing your data

Press **STORE** to store the data.

- The STORE indicator lights red and a confirmation tone is heard.

* **Confirmation tone (one beep)**

After pressing **STORE**, a beep will be heard. This informs the user that storing is completed.

* **Confirmation tone (two beeps)**

This informs the user that the parameter has already been stored.

* **Alarm tone (three beeps)**

If this alarm is heard, the user’s entry is not valid.

Making another selection within the same program address

- To make the next selection, press **NEXT**.
- To make the previous selection, press **PREV**.
- To make a specific selection, press **SELECT** and then enter the number.

Confirming the entries

The user may review the stored programming without making any changes.

Going to another program address

Press **END** and the initial system programming message will be displayed.

The display shows: SYS-PGM NO? →

Then enter a program address.

You can go to the higher number program address by pressing the **➡** button and the lower number by pressing the **⬅** button while the program title is displayed.

Display example: Day/Time Set _____ program title

Returning to the operation mode

Press the **PROGRAM** button.

4.1.3 Entering Characters

The user can enter characters to store names for extension numbers by using the dialing key pad and the buttons.

Each of the twelve dialing keys on the dialing key pad has seven characters assigned. See the Combination Table below.

Press SELECT (Number of times) Keys	0	1	2	3	4	5	6
1	1	Q	q	Z	z	!	?
2	2	A	a	B	b	C	c
3	3	D	d	E	e	F	f
4	4	G	g	H	h	I	i
5	5	J	j	K	k	L	l
6	6	M	m	N	n	O	o
7	7	P	p	R	r	S	s
8	8	T	t	U	u	V	v
9	9	W	w	X	x	Y	y
0	0		.	,	'	:	;
*	*	”	+	–	=	<	>
#	#	\$	%	&	@	()

Combination Table

Note All the alphabetical characters correspond to the letters printed above the twelve keys on a proprietary telephone. The exceptions are the letters Q, q, Z, z, and symbols.

The following example shows how to select a desired character. For example, to select the letter “M”:

1. Press **6**. (“M” is stored in key “6”.)
2. Press the **SELECT** button once.
 - Pressing the **SELECT** button an appropriate number of times enters the desired letter. Pressing **SELECT** twice enters the letter “m”, pressing three times enters “N”, and so on.

4.1.3 Entering Characters

Example of entering characters: to enter “Mike”:

The display shows:

- | | |
|------------------------------------|------|
| 1. Enter 6 . | 6 |
| 2. Press SELECT . | M |
| 3. Enter 4 . | M4 |
| 4. Press SELECT six times. | Mi |
| 5. Enter 5 . | Mi5 |
| 6. Press SELECT four times. | Mik |
| 7. Enter 3 . | Mik3 |
| 8. Press SELECT four times. | Mike |

- Note**
- To erase all the letters, press **CLEAR**.
 - To erase the last letter, press **◀**.

4.1.4 Programming Example

The following programming instructions assume that the user has already entered the programming mode.

Example: Program [001] “System Speed Dialing Entry”

(1) Program address: This address is printed at the top of every page to quickly find the desired program.

(2) Mode title.

(3) Program title.

(4) Provides a more detailed description of the program.

(5) Shows the user the assignable choices.

(6) Shows the user the factory default setting.

(7) Shows the user programming procedures step by step.

- During programming, use the overlay.
- Before starting to program, enter the programming mode. (See “Entering the programming mode” on page 4-4.)

(8) Enter the program address.

(9) The display shows the program title.

(10) Press **NEXT** shown on the overlay.

(11) The display asks the user to enter a speed dialing number.

(12) If the telephone number has already been stored, the number is displayed.

(13) Enter the telephone number that the user wants to store. The entry will be displayed as the user enters the digits.

(14) Pressing **CLEAR** erases the whole entry.

(15) The entry is now stored. The indicator lights red and a confirmation tone lets the user know that storing is completed.

(16) Select the best way for the user to store another speed dialing number. Pressing **NEXT/PREV** allows the user to select the next higher/lower speed dialing number. The user can also continue pressing a button until the desired entry is displayed. If the user presses **SELECT** and the desired speed dialing number, the selected code will be displayed.

(17) The user can continue programming another entry.

(18) After all the entries have been stored, complete this program by pressing **END**. After pressing **END**, the user can go to any desired program address. The user can return to the initial system programming message mode at any time by pressing **END**.

(19) Tells the user what should be noted or considered when doing the program.

(20) Lists all of the features related to the program. These features are described in Section 3.

*Date and Time Setting***Description**

Sets the current date and time.

Selection

- Year: **00 – 99**
- Month: **Jan. – Dec.**
- Day: **1 – 31**
- Day of the week: **Sun / Mon / Tue / Wed / Thu / Fri / Sat**
- Hour: **1 – 12**
- Minute: **00 – 59**
- **AM / PM**

Default

03 Jan. 1 Wed 12:00 AM

Programming

1. Enter **000**.

Display: Day/Time Set

2. Press **NEXT**.

Display example: '03 Jan. 1 Wed

3. Enter the **year**.

To change the current entry, press **CLEAR** and enter the new year.

4. Press **➡**.

5. Keep pressing **SELECT** until the desired month is displayed.

6. Press **➡**.

7. Enter the **day**.

To change the current entry, press **CLEAR** and enter the new day.

8. Press **➡**.

9. Keep pressing **SELECT** until the desired day of the week is displayed.

10. Press **➡**.

Display example: 12:00 AM

11. Enter the **hour**.

To change the current entry, press **CLEAR** and enter the new hour.

12. Press **➡**.

Date and Time Setting (contd.)

13. Enter the **minute**.

To change the current entry, press **CLEAR** and enter the new minute.

14. Press **➡**.

15. Press **SELECT** for AM or PM.

16. Press **STORE**.

17. Press **END**.

Conditions

- After changing an entry, the user can press **STORE**. It is not necessary to perform the rest of the steps.
- To return to a previous field, press **⬅** in steps 4 through 15.
- If an alarm is heard after pressing **STORE**, check if the date is valid or not.
- The clock starts immediately after the **STORE** button is pressed.
- The operator and manager can set the date and time in the station programming mode.

System Speed Dialing Entry

Description	Used to program the System Speed Dialing numbers. These numbers are available to all extension users. There are 100 numbers available from 00 to 99.
Selection	<ul style="list-style-type: none">• Speed dialing number: 00 – 99• Telephone number: 32 digits (max.)
Default	All speed dialing numbers – Not stored
Programming	<ol style="list-style-type: none">1. Enter 001. Display: Speed Dialing2. Press NEXT. Display: Speed NO? →3. Enter a speed dialing number. Pressing NEXT also can enter speed dialing number 00. Display example: 00:Not Stored4. Enter a telephone number. To delete the current entry, press CLEAR. To change the current entry, press CLEAR and enter the new number.5. Press STORE.6. To program another speed dialing number, press NEXT or PREV, or SELECT and enter the desired speed dialing number.7. Repeat steps 4 through 6.8. Press END.

*System Speed Dialing Entry (contd.)***Conditions**

- Each speed dialing number has a maximum of 32 digits. The valid characters are **0 – 9, *, and # keys**, and the **FLASH, PAUSE, SECRET and – (hyphen) buttons**.
 - To store a flash signal, press **FLASH**.

Note: The stored flash will only be effective during a call in progress. (Refer to Section 3 “External Feature Access”.)
 - To store a hyphen, press the “–” button.
 - To store a pause, press **PAUSE**.
(Refer to Section 3 “Pause Insertion, Automatic”.)
 - To store a feature number to convert pulse signals to DTMF signals, press the ***** and **#** keys.
(Refer to Section 3 “Pulse to Tone Conversion”.)
 - To prevent the display of all or part of a number, press **INTERCOM** before and after any confidential parts of the number. (Refer to Section 3 “Secret Dialing”.)
- When storing an external number, include a line access code (9, 81 – 83) before the number. When dialing, a pause will automatically be inserted after the code.
- When storing an account code, enter the account code after the line access code. Press *** *** and then enter the account code.
(Refer to Section 3 “Account Code Entry”.)
- It is possible to store a number consisting of 33 digits or more by storing it in two speed dialing numbers. The line access code should be stored in the first speed dialing number.
- To access another speed dialing number in steps 3 through 6, press **SELECT** and start with step 3.
- To display parts of the number which have scrolled off the display, press **➡** or **⬅**.
- Program [011] “System Speed Dialing Name Setting” is used to name the speed dialing numbers.

System Password

Description	Assigns the password required for entering the system programming mode or assigning extension passwords.
Selection	Password: 0000 – 9999999
Default	1234
Programming	<ol style="list-style-type: none">1. Enter 002. Display: System Password2. Press NEXT. Display example: Password:12343. Enter a password. To change the current entry, press CLEAR and enter the new password.4. Press STORE.5. Press END.
Conditions	None
Feature Reference	Section 3, Features System Programming with a Proprietary Telephone

One-Touch Transfer Using a DSS Button

Description

Enables or disables automatically holding an outside call when a DSS button assigned to a flexible button on a proprietary telephone is pressed. Through this assignment, the button can perform the following.

- With Transfer — Merely pressing a DSS button is enough to put an outside call on hold and execute the transfer; there is no need to press the TRANSFER button.
- Without Transfer — To transfer an outside call, it is necessary to first press the TRANSFER button and then a DSS button. Just pressing the DSS button will not execute the transfer.

Selection

With Transfer / Without Transfer

Default

With Transfer

Programming

1. Enter **005**.
Display: DSS Mode
2. Press **NEXT**.
Display example: With Transfer
3. Keep pressing **SELECT** until the desired selection is displayed.
4. Press **STORE**.
5. Press **END**.

Condition

- This assignment applies to all DSS buttons on all proprietary telephones in the system.

Time (Day/Night/Lunch) Service Changing Mode

Description	This program is used to determine if the day/night/lunch mode is set automatically or manually.
Selection	Man (manual) / Auto (automatic)
Default	Manual
Programming	<ol style="list-style-type: none"> Enter 006. Display: Day/Night Mode Press NEXT. Display example: Mode Change:Man Keep pressing SELECT until the desired selection is displayed. Press STORE. Press END.
Conditions	<ul style="list-style-type: none"> If automatic is assigned, the day/night/lunch mode is changed at the time programmed in [007] "Time (Day/Night/Lunch) Service Start Time". However, if feature number "783#" is entered and the mode is changed to "lunch", the mode will not be changed at the programmed time until feature number "780#" is entered. The operator and manager can change the day/night/lunch mode at any time.
Feature Reference	Section 3, Features Time (Day/Night/Lunch) Service

*Time (Day/Night/Lunch) Service Start Time***Description**

When automatic is programmed in program [006] “Time (Day/Night/Lunch) Service Changing Mode”, this program sets the starting time on a day of the week basis.

Selection

- Day of the week selection:
**Sunday / Monday / Tuesday / Wednesday / Thursday /
Friday / Saturday / *** (every day of the week)
- Mode: **Day / Night / Lunch-S** (lunch starting time) /
Lunch-E (lunch ending time)
- Hour: **1 – 12 / None** (no change)
- Minute: **0 – 59**
- **AM / PM**

Default

Every day of the week — Day – 9:00 AM / Night – 5:00 PM /
Lunch-S – None / Lunch-E – None

Programming

1. Enter **007**.
Display: Day/Night Time
2. Press **NEXT**.
Display: Day of The Week
3. Press **NEXT** or **PREV** until the desired day of the week is displayed.
To assign every day of the week, press ***** instead of NEXT or PREV.
Display example: Sunday
4. Press **SELECT**.
Display example: Day : 9:00AM
To select another mode, keep pressing **SELECT** until the desired selection is displayed.
5. Press **➡**.
6. Enter the **hour**.
To set no change, keep pressing **SELECT** until “None” is displayed and go to step 11.
If **SELECT** is pressed, the display shows the previous entry. If the previous setting was “None”, press **SELECT** to enter the starting time.
To change the current entry, press **CLEAR** and enter the new time.
7. Press **➡**.

Time (Day/Night/Lunch) Service Start Time (contd.)

8. Enter the **minute**.
To change the current entry, press **CLEAR** and enter the new minutes.
9. Press **➡**.
10. Press **SELECT** for AM or PM.
11. Press **STORE**.
12. To program another time service mode, press **SELECT**.
13. Repeat steps 5 through 11.
14. To program another day of the week, press **NEXT** or **PREV**.
15. Repeat steps 4 through 14.
16. Press **END**.

Conditions

- If it is not necessary to change the time service, select “None” in step 6.
- To select the desired day, the user can also keep pressing **NEXT** in step 3. To assign every day of the week to the same selection, press the **×** key in step 3. In this case, the display will show: **Every day**.
- The day or night mode is interrupted during the lunch mode. After the lunch mode is finished, the day or night mode will start again.

Description

Selects the extension ringing pattern when an intercom call is received.
The ringing patterns are shown below.

Selection

Single / Double / Triple

Default

Double

- Programming
1.

Enter **115**.

Display: Ext Ring Pattern
2.

Press **NEXT**.

Display example: Double
3.

Keep pressing **SELECT** until the desired selection is displayed.
4.

Press **STORE**.
5.

Press **END**.

Conditions

- The programs [423] “Outside (CO) Line Ringing Pattern Selection” and [706] “Doorphone Ringing/Tone Pattern Selection” should be considered when assigning this program.

Feature Reference

Section 3, Features

Ringing Pattern Selection for Intercom Calls and Outside (CO) Lines

Description	Enables or disables the confirmation tone sent when the Call pickup feature is activated.
Selection	Enable / Disable
Default	Enable
Programming	<ol style="list-style-type: none">1. Enter 117. Display: Call Pickup Tone2. Press NEXT. Display example: Enable3. Keep pressing SELECT until the desired selection is displayed.4. Press STORE.5. Press END.
Conditions	None

Pulse Restriction

Description	Enables or disables sending pulse dialing to the Central Office during a conversation with an external party, when Pulse or Call block is selected in program [401] “Dial Mode”.
Selection	Enable / Disable
Default	Enable
Programming	<ol style="list-style-type: none">1. Enter 118. Display: Pulse Restrict2. Press NEXT. Display example: Enable3. Keep pressing SELECT until the desired selection is displayed.4. Press STORE.5. Press END.
Conditions	None
Feature References	None

Redialing After Pulse to Tone Conversion

Description	Enables or disables sending tone dialing to the Central Office when an extension user redials after changing from pulse to tone mode by pressing * and #.
Selection	Enable / Disable
Default	Disable
Programming	<ol style="list-style-type: none">1. Enter 119. Display: Redial After * #2. Press NEXT. Display example: Disable3. Keep pressing SELECT until the desired selection is displayed.4. Press STORE.5. Press END.
Conditions	None
Feature Reference	Section 3, Features Pulse to Tone Conversion

*Toll Restriction Check for * and #*

Description	Assigns whether the entered “*” and “#” are checked by toll restriction or not. This assignment is required for certain Central Offices to prevent toll fraud. Some Central Offices ignore the user-dialed “*” and “#”. If the user’s Central Office ignores these symbols, select “Disable”.
Selection	Enable (check) / Disable (does not check)
Default	Enable
Programming	<ol style="list-style-type: none">1. Enter 125. Display: TRS Check for * #2. Press NEXT. Display example: Enable3. Keep pressing SELECT until the desired selection is displayed.4. Press STORE.5. Press END.
Conditions	None
Feature Reference	Section 3, Features Toll Restriction

Description	Assigns the length of the hold recall timer. This timer is used to alert an extension that a call has been held for an extended period of time.
Selection	Time: 30 sec / 1 min / 1.5 min / 2 min / 3 min / 4 min / 5 min / 6 min / Disable (= Hold Recall disabled) (seconds/minutes)
Default	30 sec
Programming	<ol style="list-style-type: none">1. Enter 200. Display: Hold Recall Time2. Press NEXT. Display example: Time:30 sec3. Keep pressing SELECT until the desired selection is displayed.4. Press STORE.5. Press END.
Condition	<ul style="list-style-type: none">• When “Disable” is selected, the hold alarm is also disabled.
Feature Reference	Section 3, Features Hold Alarm/Hold Recall

Transfer Recall Time

Description	Assigns the length of the transfer recall timer. If a transferred call is not answered within the programmed time, the call will be returned to the person who initiated the transfer.
Selection	Time: 15 sec / 30 sec / 1 min / 2 min (seconds/minutes)
Default	30 sec
Programming	<ol style="list-style-type: none">1. Enter 201. Display: Transfer Recall2. Press NEXT. Display example: Time:30 sec3. Keep pressing SELECT until the desired selection is displayed.4. Press STORE.5. Press END.
Conditions	None
Feature Reference	Section 3, Features Call Transfer, Unscreened — to Extension

Call Forwarding Start Time

Description	Sets the time for the Call Forwarding – No Answer feature. If a call is not answered within the programmed time, the call will be forwarded to the destination.
Selection	5 sec delay / 10 sec delay / 15 sec delay / 20 sec delay (seconds)
Default	15 sec delay
Programming	<ol style="list-style-type: none">1. Enter 202. Display: Call FWD Delay2. Press NEXT. Display example: 15sec delay3. Keep pressing SELECT until the desired selection is displayed.4. Press STORE.5. Press END.
Conditions	None
Feature Reference	Section 3, Features Call Forwarding – Busy/No Answer

Pickup Dial Delay Time

Description	Sets the length of time for the Pickup Dialing feature. If the telephone user lifts the handset, the programmed party will be called when the time expires. This delay gives the user an opportunity to enter numbers before automatic dialing occurs.
Selection	1 sec / 2 sec / 3 sec / 4 sec (seconds)
Default	3 sec
Programming	<ol style="list-style-type: none">1. Enter 203. Display: Pickup Dial Time2. Press NEXT. Display example: PUD Time:3sec3. Keep pressing SELECT until the desired selection is displayed.4. Press STORE.5. Press END.
Conditions	None
Feature Reference	Section 3, Features Pickup Dialing

Call Duration Count Start Time

Description	Sets the number of seconds the system waits between the end of dialing and the start of the SMDR timer for outgoing toll calls. When the system has sent all the digits to the central office and this timer expires, the system will start counting the call. A display telephone shows the elapsed time of the call. The starting time and the duration of a call are recorded in the SMDR record.
Selection	Instantly / 5 s / 10 s / 15 s / 20 s / 25 s / 30 s / 35 s / 40 s / 45 s / 50 s after dial (seconds)
Default	10 s after dial
Programming	<ol style="list-style-type: none">1. Enter 204. Display: Durat-Time Count2. Press NEXT. Display example: 5s after dial3. Keep pressing SELECT until the desired selection is displayed.4. Press STORE.5. Press END.
Condition	<ul style="list-style-type: none">• The timer starts counting after all the digits are dialed. This timer does not apply to incoming calls. The timer for incoming calls starts immediately.

Toll Restriction — System Speed Dialing Boundary Class

Description	Assigns the Toll Restriction class for System Speed Dialing numbers.
Selection	Boundary COS-1 / Boundary COS-2 / Boundary COS-3 / Boundary COS-4 / Boundary COS-5
Default	Boundary COS-1
Programming	<ol style="list-style-type: none">1. Enter 301. Display: SSD Boundary2. Press NEXT. Display example: Boundary COS-13. Keep pressing SELECT until the desired selection is displayed.4. Press STORE.5. Press END.
Conditions	None
Feature Reference	Section 3, Features Toll Restriction for System Speed Dialing

*Toll Restriction — Class 2 – 5 Denied Codes***Description**

These allow the user to specify which numbers are toll-restricted for each toll restriction class as follows.

Program [302]: restricts COS numbers 2 – 5.

Program [303]: restricts COS numbers 3 – 5.

Program [304]: restricts COS numbers 4 – 5.

Program [305]: restricts COS number 5.

Selection

- Code number: **01 – 20**
- Toll restriction number: **11 digits**

Default

All codes – Not stored

Programming

1. Enter a **program address (302 to 305)**.

Display example: COS-2 Table

2. Press **NEXT**.

Display: CODE NO? →

3. Enter a **code number**.

Pressing **NEXT** also can enter code number 01.

Display example: 01:

4. Enter a **toll call number**.

To delete the current entry, press **CLEAR**.

To change the current entry, press **CLEAR** and enter the new number.

5. Press **STORE**.

6. To program another code, press **NEXT** or **PREV**, or **SELECT** and enter the desired **code number**.

7. Repeat steps 4 through 6.

8. Press **END**.

Conditions

- There is a maximum of 20 numbers which can be restricted for each program. Each number must have eleven digits, consisting of **0 – 9**, *****, **#** and **x** (PAUSE button). The character “x” can be used as a wild card character and is entered by pressing the PAUSE button.
- Program [306] “Toll Restriction — Exception Codes” is used to assign exceptions to these numbers. Programs [601]–[603] “TRS – Class of Service (COS) Assignment — Day/Night/Lunch” are used to set the toll restriction value for each extension.

Toll Restriction

Toll Restriction — Exception Codes

Description	This allows the user to assign numbers which are exceptions to toll restriction specified in programs [302] – [305].
Selection	<ul style="list-style-type: none"> • Code number: 01 – 80 • Exception number: 11 digits
Default	All codes – Not stored
Programming	<ol style="list-style-type: none"> 1. Enter 306. Display: Excepted Table 2. Press NEXT. Display: CODE NO?→ 3. Enter a code number. Pressing NEXT also can enter code number 01. Display example: 01: 4. Enter an exception number. To delete the current entry, press CLEAR. To change the current entry, press CLEAR and enter the new number. 5. Press STORE. 6. To program another code, press NEXT or PREV, or SELECT and enter the desired code number. 7. Repeat steps 4 through 6. 8. Press END.
Conditions	<ul style="list-style-type: none"> • There is a maximum of eighty numbers. Each number must have eleven digits, consisting of 0 – 9, *, # and x (PAUSE button). The character “x” can be used as a wild card character and is entered by pressing the PAUSE button. • Code numbers 01 – 80 apply to COS number 2, 01 – 60 apply to COS number 3, 01 – 40 apply to COS number 4, and 01 – 20 apply to COS number 5.
Feature Reference	Section 3, Features Toll Restriction

Emergency Dial Number Set

Description	Stores up to five emergency numbers. Emergency numbers are not subject to toll restriction, Account Code – Forced/Verify - All modes or Electronic Station Lockout.
Selection	<ul style="list-style-type: none">• Code number: 1 – 5• Emergency number: 24 digits (max.)
Default	Code-01 = 911, Other Codes = Not stored
Programming	<ol style="list-style-type: none">1. Enter 309. Display: Emergency Code2. Press NEXT. Display: CODE NO? →3. Enter a code number. Pressing NEXT also can enter code number 1. Display example: 01:4. Enter an emergency number. To delete the current entry, press CLEAR. To change the current entry, press CLEAR and enter the new number.5. Press STORE.6. To program another code, press NEXT or PREV, or SELECT and enter the desired code number.7. Repeat steps 4 through 6.8. Press END.
Condition	<ul style="list-style-type: none">• Each emergency number has a maximum of 24 digits, consisting of 0 – 9.
Feature References	Section 3, Features Account Code Entry Electronic Station Lockout Emergency Call Toll Restriction

Description	Assigns the account codes for Account Code Entry, Verify – All and Verify – Toll modes. If Verify – All is assigned in program [605] “Account Code Entry Mode”, an account code is required to make an outside call. If Verify – Toll is assigned, an account code is only required to override toll restriction.
Selection	<ul style="list-style-type: none">• Code number: 01 – 24• Account code: 4 digits
Default	All codes – Not stored
Programming	<ol style="list-style-type: none">1. Enter 310. Display: Account Code2. Press NEXT. Display: CODE NO? →3. Enter a code number. Pressing NEXT also can enter code number 01. Display example: CODE-01:....4. Enter an account code. To delete the current entry, press CLEAR. To change the current entry, press CLEAR and enter the new account code.5. Press STORE.6. To program another code number, press NEXT or PREV, or SELECT and enter the desired code number.7. Repeat steps 4 through 6.8. Press END.
Conditions	<ul style="list-style-type: none">• Each verifiable account code has 4 digits, consisting of 0 – 9.• Program [605] “Account Code Entry Mode” is used to select the Account Code Entry mode.
Feature References	Section 3, Features Account Code Entry Toll Restriction Override by Account Codes

Automatic Pause Insertion Codes

Description

Assigns up to 40 automatic pause insertion codes which are checked with the outside outgoing call number. When one of the codes is the same as the call number, the pause time assigned in program [417] “Pause Time” is automatically inserted after the code. If a second dial tone is sent from the Central Office, it is convenient to assign the area code as the pause code.

Selection

- Code number: **01 – 40**
- Pause code number: **11 digits (max.)**

Default

All codes – Not stored

Programming

1. Enter **311**.
Display: Auto Pause Code
2. Press **NEXT**.
Display: CODE NO? →
3. Enter a **code number**.
Pressing **NEXT** also can enter code number 01.
Display example: 01:.....
4. Enter a **pause code**.
To delete the current entry, press **CLEAR**.
To change the current entry, press **CLEAR** and enter the new number.
5. Press **STORE**.
6. To program another code number, press **NEXT** or **PREV**, or **SELECT** and enter the desired **code number**.
7. Repeat steps 4 through 6.
8. Press **END**.

Condition

- Each pause code number has a maximum of eleven digits, consisting of **0 – 9**.

Outside (CO) Line Group Assignment

Description	Each outside (CO) line must be assigned to an outside (CO) line group (trunk group). This program defines the outside (CO) line group assignment for each outside (CO) line. For example, if there are multiple telephone service companies available, the outside (CO) lines can be grouped by company.
Selection	<ul style="list-style-type: none"> • Outside (CO) line number: 1 – 3, * (* = all outside (CO) lines) • Outside (CO) line group (Trunk) number: 1 – 3
Default	CO1 — TRK GRP-1; CO2 — TRK GRP-2; CO3 — TRK GRP-3;
Programming	<ol style="list-style-type: none"> 1. Enter 404. Display: Trunk Group 2. Press NEXT. Display: CO NO? → 3. Enter an outside (CO) line number. Pressing NEXT also can enter outside (CO) line number 1. Display example: CO 1:TRK GRP-1 4. Enter the outside (CO) line group number. To change the current entry, enter the new outside (CO) line group number. 5. Press STORE. 6. To program another outside (CO) line, press NEXT or PREV, or SELECT and enter the desired outside (CO) line number. 7. Repeat steps 4 through 6. 8. Press END.
Condition	<ul style="list-style-type: none"> • To assign all outside (CO) lines to the same outside (CO) line group, press the * key in step 3. In this case, the display will show: CO *:Mixed.
Feature Reference	Section 3, Features Outside (CO) Line Group

Description

Determines which outside (CO) lines can be accessed by an extension in the day, night and lunch modes. The extension users can make outgoing outside calls using the assigned outside (CO) lines.

Selection

- Outside (CO) line number: **1 – 3, *** (* = all outside (CO) lines)
- Jack number: **01 – 08, *** (* = all jacks)
- **Enable / Disable**

Default

All outside (CO) lines – all jacks – Enable — Day/Night/Lunch

Programming

1. Enter a **program address (405 for day, 406 for night or 407 for lunch).**

Display example: Day Out CO

2. Press **NEXT**.

Display: CO NO? →

3. Enter an **outside (CO) line number**.

Pressing **NEXT** also can enter outside (CO) line number 1.

Display example: CO 1:#01:Enable

4. Enter the desired **jack number** after pressing the # key.

The user can also keep pressing **▶** or **◀** until the desired jack number is displayed.

5. Keep pressing **SELECT** until the desired selection is displayed.

6. Press **STORE**.

7. To program another jack, press **▶** or **◀**, or # and enter the desired **jack number**.

8. Repeat steps 5 through 7.

9. To program another outside (CO) line, press **NEXT** or **PREV**, or **SELECT** and the desired **outside (CO) line number**.

10. Repeat steps 4 through 9.

11. Press **END**.

Condition

- To assign all jacks or outside (CO) lines to the same selection, press the * key in step 3 or 4. In these cases, the display will show:
CO *:# *:Mixed.

Outside (CO) Line Connection Assignment – Outgoing Time (Day/Night/Lunch) Service

Flexible Ringing Assignment — Day/Night/Lunch

Description

Allows more than one extension to ring in the day, night and lunch modes. All incoming calls from the programmed outside (CO) lines are directed to the specified extensions.

Selection

- Outside (CO) line number: **1 – 3, *** (* = all outside (CO) lines)
- Jack number: **01 – 08, *** (* = all jacks)
- **Disable / Enable**

Default

All outside (CO) lines – all jacks – Enable — Day/Night/Lunch

Programming

1. Enter a **program address (408 for day, 409 for night or 410 for lunch).**

Display example: Day In CO

2. Press **NEXT**.

Display: CO NO? →

3. Enter an **outside (CO) line number**.

Pressing **NEXT** also can enter outside (CO) line number 1.

Display example: CO 1:#01:Enable

4. Enter the **jack number** after pressing the # key.

The user can also keep pressing **➡** or **⬅** until the desired jack number is displayed.

5. Keep pressing **SELECT** until the desired selection is displayed.

6. Press **STORE**.

7. To program another jack, press **➡** or **⬅**, or # and enter the desired **jack number**.

8. Repeat steps 5 through 7.

9. To program another outside (CO) line, press **NEXT** or **PREV**, or **SELECT** and the desired **outside (CO) line number**.

10. Repeat steps 4 through 9.

11. Press **END**.

Conditions

- An extension can be assigned as the destination for as many outside (CO) lines required.
- To assign all jacks or all outside (CO) lines to the same selection, press the * key in step 3 or step 4. In these cases, the display will show:
CO *:# *:Mixed.

Ringing, Delayed

Time (Day/Night/Lunch) Service

*Delayed Ringing Assignment — Day/Night/Lunch***Description**

Assigns the ringing start time for each jack in the day, night and lunch modes.

Selection

- Outside (CO) line number: **1 – 3, *** (* = all outside (CO) lines)
- Jack number: **01 – 08, *** (* = all jacks)
- **Immdtly** (immediate ringing) / **5 sec** / **10 sec** / **15 sec**

Default

All outside (CO) lines – all jacks – Immdtly — Day/Night/Lunch

Programming

1. Enter a **program address** (**411 for day, 412 for night or 413 for lunch**).

Display example: Day Delayed CO

2. Press **NEXT**.

Display: CO NO? →

3. Enter an **outside (CO) line number**.

Pressing **NEXT** also can enter outside (CO) line number 1.

Display example: CO 1:#01:Immdtly

4. Enter a **jack number** after pressing the # key.

The user can also keep pressing **➡** or **⬅** until the desired outside (CO) line number is displayed.

5. Keep pressing **SELECT** until the desired selection is displayed.

6. Press **STORE**.

7. To program another jack, press **➡** or **⬅**, or # and enter the desired **jack number**.

8. Repeat steps 5 through 7.

9. To program another outside (CO) line, press **NEXT** or **PREV**, or **SELECT** and the desired **outside (CO) line number**.

10. Repeat steps 4 through 9.

11. Press **END**.

Conditions

- To assign all jacks or outside (CO) lines to the same selection, press the * key in step 3 or step 4. In these cases, the display will show:
CO *:# *:Mixed.
- There are four notification methods.
 - (1) Immediate ringing: rings immediately
 - (2) 5 second delay
 - (3) 10 second delay
 - (4) 15 second delay

Ringing, Delayed
Time (Day/Night/Lunch) Service

*Outside (CO) Line Mode — Day/Night/Lunch***Description**

Selects the mode of an incoming outside call on each outside (CO) line in the day, night and lunch modes. There are the following three modes.

Normal: an incoming outside call will be received at the extension(s) assigned in programs [408]–[410].

DIL: an incoming outside call will be received at the assigned extension.

DISA1: an incoming outside call will be received at an extension through the DISA feature. A caller will hear a tone.

Selection

- Outside (CO) line number: **1 – 3, *** (* = all outside (CO) lines)
- **Normal / DIL + extension jack number (01 through 08) / DISA1**

Default

All outside (CO) lines – Normal — Day/Night/Lunch

Programming

1. Enter a **program address (414 for day, 415 for night or 416 for lunch)**.

Display example: CO Day/Mode

2. Press **NEXT**.

Display: CO NO? →

3. Enter an **outside (CO) line number**.

Pressing **NEXT** also can enter outside (CO) line number 1.

Display example: CO 1:Normal

4. Keep pressing **SELECT** until the desired selection is displayed and if “DIL” is selected, enter the **extension jack number**.
5. Press **STORE**.
6. To program another outside (CO) line, press **NEXT** or **PREV**, or **SELECT** and enter the desired **outside (CO) line number**.
7. Repeat steps 4 through 6.
8. Press **END**.

Condition

- To assign all the outside (CO) lines to the same selection, press the * key in step 3. In this case, the display will show: CO *:Mixed.

Condition	<ul style="list-style-type: none">• To assign all outside (CO) lines to the same selection, press the * key in step 3. In this case, the display will show: CO *:Mixed.
Feature Reference	Section 3, Features Local Carrier-Based Voice Mail Service

Local Carrier-Based Voice Mail Access Dial Assignment

Description

Assigns the voice mail service access number. This allows a PT user to access the telephone company's voice mail service when a message is left in the mailbox. The PT user can access the voice mail service and listen to the message stored in the mailbox by pressing the corresponding CO button (flashing red moderately) and then the MESSAGE button after going off-hook.

Selection

- Outside (CO) line number: **1 – 3**
- Voice mail service access number: **32 digits (max.)**

Default

All outside (CO) lines – Not stored

Programming

1. Enter **436**.
Display: CO VM Dial
2. Press **NEXT**.
Display: CO NO? →
3. Enter an **outside (CO) line number**.
Pressing **NEXT** also can enter outside (CO) line number 1.
Display example: #1:Not Stored
4. Enter a **voice mail service access number**.
To delete the current entry, press **CLEAR**.
To change the current entry, press **CLEAR** and enter the new number.
5. Press **STORE**.
6. To program another outside (CO) line, press **NEXT** or **PREV**, or **SELECT** and enter the desired **outside (CO) line number**.
7. Repeat steps 4 through 6.
8. Press **END**.

Local Carrier-Based Voice Mail Access Dial Assignment (contd.)

Conditions

- Each voice mail service access number has a maximum of 32 digits. The valid characters are **0 – 9**, *****, and **#** keys, and the **FLASH**, **PAUSE**, **SECRET** and **– (hyphen)** buttons.
 - To store a flash signal, press **FLASH**.
Note: The stored flash will only be effective during a call in progress. (Refer to Section 3 “External Feature Access”.)
 - To store a hyphen, press the “**–**” button.
 - To store a pause, press **PAUSE**.
(Refer to Section 3 “Pause Insertion, Automatic”.)
 - To store a feature number to convert pulse signals to DTMF signals, press the ***** and **#** keys.
(Refer to Section 3 “Pulse to Tone Conversion”.)
 - To prevent the display of all or part of a number, press **INTERCOM** before and after any confidential parts of the number. (Refer to Section 3 “Secret Dialing”.)
- To access another voice mail service access number in steps 4 through 6, press **SELECT** and start with step 3.
- To display parts of the number which have scrolled off the display, press **➡** or **⬅**.

DISA Intercept Mode

Description	<p>Intercept Routing provides an automatic re-direction of DISA calls which cannot or have not been answered within the programmed time. This program is used to select whether the call is disconnected or re-directed.</p> <p>Intercept: the call is directed to the extensions assigned in programs [408]–[410].</p> <p>Disconnect: the call is disconnected.</p>
Selection	Disconnect / Intercept
Default	Intercept
Programming	<ol style="list-style-type: none">1. Enter 507. Display: DISA IRNA Mode2. Press NEXT. Display example: Intercept3. Keep pressing SELECT until the desired selection is displayed.4. Press STORE.5. Press END.
Conditions	None
Feature References	Section 3, Features Direct Inward System Access (DISA) Intercept Routing

DISA Ringing Time before Intercept

Description	Selects the time for the Intercept Routing — No Answer (IRNA) feature. If a DISA call is not answered within the programmed time, the call will be redirected to the programmed extension.
Selection	10 sec / 20 sec / 30 sec / 40 sec / 60 sec / 120 sec (seconds)
Default	20 sec
Programming	<ol style="list-style-type: none">1. Enter 508. Display: DISA Befor IRNA2. Press NEXT. Display example: Time: 20sec3. Keep pressing SELECT until the desired selection is displayed.4. Press STORE.5. Press END.
Condition	<ul style="list-style-type: none">• Programs [408]–[410] “Flexible Ringing Assignment — Day/Night/Lunch” are used to program the destination of Intercept Routing in the day, night and lunch modes.
Feature References	Section 3, Features Direct Inward System Access (DISA) Intercept Routing

DISA Ringing Time after Intercept

Description	Selects the time that the extension will ring for after being re-directed by the Intercept Routing — No Answer (IRNA) feature. If a call is not answered within the programmed time, the call will be disconnected.
Selection	10 sec / 20 sec / 30 sec / 40 sec / 60 sec / 120 sec (seconds)
Default	20 sec
Programming	<ol style="list-style-type: none">1. Enter 509. Display: DISA After IRNA2. Press NEXT. Display example: Time: 20sec3. Keep pressing SELECT until the desired selection is displayed.4. Press STORE.5. Press END.
Conditions	None
Feature References	Section 3, Features Direct Inward System Access (DISA) Intercept Routing

DISA No Dial Mode

Description	<p>Selects the mode when nothing is dialed after a beep after a programmed length of time for the DISA1 mode. There are two modes as follows.</p> <p>Intercept: the call is directed to the extensions assigned in programs [408]–[410] for the time programmed in [509] “DISA Ringing Time after Intercept”.</p> <p>Disconnect: the call is disconnected.</p>
Selection	• Intercept / Disconnect
Default	DISA1 — Intercept
Programming	<ol style="list-style-type: none">1. Enter 510. Display: DISA No Dial2. Press NEXT. Display example: DISA1:Disconnect3. Keep pressing SELECT until the desired selection is displayed.4. Press STORE.5. Press END.
Conditions	None
Feature References	Section 3, Features Direct Inward System Access (DISA) Intercept Routing

Description	Assigns the security mode for outside calls from a DISA (Direct Inward System Access) caller. There are three modes: None Security, Trunk Security (outside (CO) line security), and All Security. None Security mode allows the caller to access an outside (CO) line without dialing a DISA security code. Trunk Security mode requires the caller to enter a DISA security code before making an outside call. All Security mode requires the caller to enter a DISA security code before making either an outside call or an intercom call.
Selection	None Security / Trunk Security / All Security
Default	Trunk Security
Programming	<ol style="list-style-type: none">1. Enter 511. Display: Security Type2. Press NEXT. Display example: Trunk Security3. Keep pressing SELECT until the desired selection is displayed.4. Press STORE.5. Press END.
Condition	<ul style="list-style-type: none">• Program [512] “DISA Security Codes” is used to program the DISA Security Codes.
Feature Reference	Section 3, Features Direct Inward System Access (DISA)

DISA Security Codes

Description	Assigns the DISA (Direct Inward System Access) Security Codes.
Selection	<ul style="list-style-type: none">• Code number : 1 – 4• DISA security code: 4 digits (programmable)
Default	All codes — Not stored
Programming	<ol style="list-style-type: none">1. Enter 512. Display: Security Code2. Press NEXT. Display: CODE NO? →3. Enter a code number. Pressing NEXT also can enter code number 1. Display example: 01:*12344. Enter a DISA security code. To change the current entry, press CLEAR and enter the new code.5. Press STORE.6. To program another code, press NEXT or PREV, or SELECT and enter the desired code number.7. Repeat steps 4 through 6.8. Press END.
Conditions	<ul style="list-style-type: none">• This setting is required if All Security mode or Trunk (outside (CO) line) Security mode is selected in program [511] “DISA Security Type”.• There are four programmable security codes. Each code should be different and composed of numerical digits, 0 – 9.• The number of digits for the security codes can be programmed in [530] “DISA Security Codes Digits Selection”.• The used security code numbers (not security codes) are printed on the SMDR.
Feature Reference	Section 3, Features Direct Inward System Access (DISA)

Intercept Time for Internal DISA

Description	Selects the time that the system waits for DTMF signals when a call is received via the internal DISA. If the system does not receive the DTMF signals within the assigned period of time, the call will be disconnected or sent to extensions programmed in [408]–[410] according to program [510].
Selection	3 sec / 6 sec / 9 sec (seconds)
Default	3 sec
Programming	<ol style="list-style-type: none">1. Enter 515. Display: Internal DISA2. Press NEXT. Display example: Time: 3 sec3. Keep pressing SELECT until the desired selection is displayed.4. Press STORE.5. Press END.
Conditions	None
Feature Reference	Section 3, Features Direct Inward System Access (DISA)

DISA Incoming Assignment

Description	Assigns the extensions which can receive calls via DISA.
Selection	<ul style="list-style-type: none">• Jack number: 01 – 08, * (* =all jacks)• Enable / Disable
Default	All jacks — Enable
Programming	<ol style="list-style-type: none">1. Enter 516. Display: DISA Assign2. Press NEXT. Display: Jack NO? →3. Enter a jack number. Pressing NEXT also can enter jack number 01. Display example: #01:Enable4. Keep pressing SELECT until the desired selection is displayed.5. Press STORE.6. To program another jack, press NEXT or PREV, or SELECT and enter the desired jack number.7. Repeat steps 4 through 6.8. Press END.
Conditions	<ul style="list-style-type: none">• If a caller attempts to access an extension which is set to “Disable”, the caller will hear a reorder tone and the call will be disconnected.• If a call via DISA is received by a ring group, this program will not work for extensions in that ring group. In this case, disabled extensions will still ring.• To assign all jacks to the same selection, press the * key in step 3. In this case, the display will show: # * :Mixed.
Feature Reference	Section 3, Features Direct Inward System Access (DISA)

DISA AA Wait Time

Description	Selects the time that the system waits for a second digit entry. If the timer expires, the system will assume that the first digit is a DISA built-in auto attendant number (AA number) if an AA number is assigned in program [501] "DISA Built-in Auto Attendant". For example, if a number is not dialed within the programmed time after dialing 1, the system will assume that "1" is an AA number.
Selection	1 sec / 2 sec / 3 sec / 4 sec / 5 sec (seconds)
Default	2 sec
Programming	<ol style="list-style-type: none">1. Enter 517. Display: DISA AA Time2. Press NEXT. Display example: Time: 2 sec3. Keep pressing SELECT until the desired selection is displayed.4. Press STORE.5. Press END.
Condition	<ul style="list-style-type: none">• The AA wait timer will only work when "1" or "8" is dialed.
Feature Reference	Section 3, Features Direct Inward System Access (DISA)

DISA Tone Selection after the Security Code

Description	Enables or disables sending a beep to a caller after the Security Code is entered. If enabled, a beep is sent to the caller when the code entered is the same as one of the security codes assigned in program [512] “DISA Security Codes”.
Selection	Enable / Disable
Default	Enable
Programming	<ol style="list-style-type: none">1. Enter 518. Display: DISA Dial Tone2. Press NEXT. Display example: Enable3. Keep pressing SELECT until the desired selection is displayed.4. Press STORE.5. Press END.
Conditions	None
Feature Reference	Section 3, Features Direct Inward System Access (DISA)

DISA Security Codes Digits Selection

Description	Selects the number of digits for the DISA security codes assigned in program [512] “DISA Security Codes”.
Selection	Number of digits: 4 – 10 digits
Default	4 digits
Programming	<ol style="list-style-type: none">1. Enter 530. Display: Security Digits2. Press NEXT. Display example: 4 digits3. Keep pressing SELECT until the desired selection is displayed.4. Press STORE.5. Press END.
Condition	<ul style="list-style-type: none">• When the setting has been changed in this program, the DISA security codes, if already assigned, will be canceled.
Feature Reference	Section 3, Features Direct Inward System Access (DISA)

*Extension Group Assignment***Description**

Assigns an extension group for each extension. Extension groups are used for Group Call Pickup, Station Hunting, Paging – Group and Ring Group.

Selection

- Jack number: **01 – 08**, * (* = all jacks)
- Extension group number (EXT GRP): **1 – 8**

Default

All jacks — EXT GRP-1

Programming

1. Enter **600**.
Display: Extension Group
2. Press **NEXT**.
Display: Jack NO? →
3. Enter a **jack number**.
Pressing **NEXT** also can enter jack number 01.
Display example: #01:EXT GRP-1
4. Enter the **extension group number**.
To change the current entry, enter the new extension group number.
5. Press **STORE**.
6. To program another jack, press **NEXT** or **PREV**, or **SELECT** and enter the desired **jack number**.
7. Repeat steps 4 through 6.
8. Press **END**.

Conditions

- There is a maximum of eight extension groups. Each extension can only belong to one group.
- To assign all jacks to the same extension group, press the * key in step 3. In this case, the display will show: # *:Mixed.

*Account Code Entry Mode***Description**

Selects the account code input mode for each extension jack. There are four account code modes: Option, Forced, Verify-All and Verify-Toll.

Option mode: The user can enter any account code, if needed.

Forced mode: The user must always enter an account code. The code can be any number.

Verify – All mode: The user must always enter a pre-assigned account code to make an outside call.

Verify – Toll mode: The user can enter an assigned account code to override toll restriction. The toll restriction COS numbers 3 through 5 will be changed temporarily to the COS number 2. (The COS numbers 1 and 2 will not be changed.)

Selection

- Jack number: **01 – 08, *** (* = all jacks)
- **Option / Forced / Verify – All / Verify – Toll**

Default

All jacks – Option

Programming

1. Enter **605**.
Display: Call Accounting
2. Press **NEXT**.
Display: Jack NO? →
3. Enter a **jack number**.
Pressing **NEXT** also can enter jack number 01.
Display: #01:Option
4. Keep pressing **SELECT** until the desired selection is displayed.
5. Press **STORE**.
6. To program another jack, press **NEXT** or **PREV**, or **SELECT** and enter the desired **jack number**.
7. Repeat steps 4 through 6.
8. Press **END**.

Account Code Entry Mode (contd.)

Conditions

- To assign all jacks to the same selection, press the * key in step 3. In this case, the display will show: # *:Mixed.
- Program [310] “Account Codes” is used to define the Account Codes for the Verify modes.
- Programs [601]–[603] “TRS – Class of Service (COS) Assignment — Day/Night/Lunch” is used to assign a Class of Service to each extension.

*Doorphone Chime Pattern Selection***Description**

Assigns an incoming doorphone call chiming pattern for each doorphone. There are eight patterns as follows:

* The chime pattern occurs only once during the doorphone ringing time.

Selection

- Doorphone number: **1 – 2, *** (* = all doorphones)
- **Pattern 1 / Pattern 2 / Pattern 3 / Pattern 4 / Pattern 5 / Pattern 6 / Pattern 7 / Pattern 8**

Default

All doorphones — Pattern 1

Programming

1. Enter **712**.
Display: Chime Pattern
2. Press **NEXT**.
Display: Door NO? →
3. Enter a **doorphone number**.
Pressing **NEXT** also can enter doorphone number 1.
Display example: DP-1:Pattern 1
4. Keep pressing **SELECT** until the desired selection is displayed.
5. Press **STORE**.

Doorphone Chime Pattern Selection (contd.)

6. To program another doorphone, press **NEXT** or **PREV**, or **SELECT** and enter the desired **doorphone number**.
7. Repeat steps 4 through 6.
8. Press **END**.

Condition

- To assign all doorphones to the same selection, press the ***** key in step 3. In this case, the display will show: DP-*:Mixed.

SMDR RS-232C Communication Parameters

Description

Assigns the communication parameters for the Serial Interface (RS-232C).

New line code: Selects the code for the printer or personal computer. If the printer or personal computer automatically feeds lines with a carriage return, select "CR". If not, select "CR+LF".

Baud rate: The baud rate code indicates the data transmission speed from the system to the printer or personal computer.

Word length: The word length code indicates how many bits compose a character.

Parity: The parity code indicates what type of parity is used to detect an error in the string of bits composing a character. Make the selection depending on the requirements of the printer or personal computer.

Stop bit: The stop bit code indicates the end of a bit string which composes a character. Select a value depending on the requirements of the printer or personal computer.

Selection

- New line code: **CR+LF / CR**
(CR=Carriage Return, LF=Line Feed)
- Baud rate (baud): **150 / 300 / 600 / 1200 / 2400 / 4800 / 9600**
- Word length (bits): **7 / 8**
- Parity: **None / Mark / Space / Even / Odd**
- Stop bit length (bits): **1 / 2**

Default

New line code = CR+LF;
Baud rate = 9600;
Word length = 8;
Parity = Mark;
Stop bit = 1

Programming

1. Enter **800**.
Display: RS232C Parameter
2. Press **NEXT** to program the new line code.
Display example: NL-Code:CR+LF
3. Keep pressing **SELECT** until the desired selection is displayed.
4. Press **STORE**.
5. Press **NEXT** to program the baud rate.
Display example: Baud Rate:9600B

SMDR RS-232C Communication Parameters (contd.)

6. Keep pressing **SELECT** until the desired selection is displayed.
7. Press **STORE**.
8. Press **NEXT** to program the word length.
Display example: Word Length:8bit
9. Keep pressing **SELECT** until the desired selection is displayed.
10. Press **STORE**.
11. Press **NEXT** to program the parity bit.
Display example: Parity:Mark
12. Keep pressing **SELECT** until the desired selection is displayed.
13. Press **STORE**.
14. Press **NEXT** to program the stop bit.
Display example: Stop Bit:1bit
15. Keep pressing **SELECT** until the desired selection is displayed.
16. Press **STORE**.
17. Press **END**.

Condition

- The following combinations are invalid.

Parity	Word Length	Stop Bit
Mark	8	2
Space	8	1
Space	8	2

Incoming/Outgoing Call Selection for Printing

Description	Used to determine which calls will produce an SMDR printout.
Selection	<ul style="list-style-type: none">• Outgoing calls: On (all calls) / Off (no printing) / Toll (printing toll calls only)• Incoming calls: On (all calls) / Off (no printing)
Default	Outgoing calls – On; Incoming calls – On
Programming	<ol style="list-style-type: none">1. Enter 802. Display: Call Printing2. Press NEXT to program outgoing calls. Display example: Outgoing:On3. Keep pressing SELECT until the desired selection is displayed.4. Press STORE.5. Press NEXT to program incoming calls. Display example: Incoming:On6. Keep pressing SELECT until the desired selection is displayed.7. Press STORE.8. Press END.
Conditions	<ul style="list-style-type: none">• A printer must be connected to the Serial Interface (RS-232C) port provided on the system.• When “Toll” is selected, only calls which are checked in programs [302]–[305] “Toll Restriction — Class 2 – 5 Denied Codes” and are allowed, are printed out.
Feature Reference	Section 3, Features Station Message Detail Recording (SMDR)

Secret Speed Dialing/One-Touch Dialing Printing

Description	Enables or disables printing out the secret dial numbers stored in speed dialing and one-touch dialing on the SMDR.
Selection	• No printing / Printing
Default	No printing
Programming	<ol style="list-style-type: none">1. Enter 803. Display: Secret Printing2. Press NEXT. Display example: No Printing3. Keep pressing SELECT until the desired selection is displayed.4. Press STORE.5. Press END.
Conditions	None
Feature References	Section 3, Features Secret Dialing Station Message Detail Recording (SMDR)

Description

Starts or stops printing the assigned data. All or a specific area of current programmed data is printed out. The areas are as follows.

All Para: All data

System Para: All data except the following programs.

CO Para: Programmed data of [400]–[403], [405]–[423], [435]–[437], [900] and [913].

Ext Para: Programmed data of [516], [600]–[618], [904], [909] and [963] if a proprietary telephone is connected. The assigned data on the CO buttons are also printed out.
Programmed data of [516], [600]–[612] and [963] if a single line telephone is connected. The stored Personal Speed Dialing numbers are also printed out.

Speed Dial: Programmed data of [001], [011]

Stop Output: Stops printing.

Selection

All Para / System Para / CO Para + outside (CO) line number:

1 – 3, * (* = all outside (CO) lines) /

Ext Para + jack number: 01 – 08, * (* = all jacks) /

Speed Dial / Stop Output

Default

Not applicable.

Programming

1. Enter **804**.

Display: System Data Dump

2. Press **NEXT**.

Display: Menu:All Para

3. Keep pressing **SELECT** until the desired selection is displayed.

4. Press **STORE**.

5. If CO Para or Ext Para is selected, enter an **outside (CO) line number** or a **jack number**.

6. Press **STORE**.

7. Press **END**.

System Data Dump (contd.)

Condition

- A printer must be connected to the Serial Interface (RS-232C) port provided on the system.

Caller ID Area Code Assignment

Description	Assigns the required area code when using the Caller ID feature. By assigning the area code, the system records the caller's phone number modified by programs [902] "Caller ID Modification for Local Calls" and [903] "Caller ID Modification for Long Distance Calls".
Selection	<ul style="list-style-type: none">• Code number: 1 – 5• Area code: 6 digits max.
Default	All codes – Not stored
Programming	<ol style="list-style-type: none">1. Enter 901. Display: CID Area Code2. Press NEXT. Display: CODE NO? →3. Enter a code number. Pressing NEXT also can enter code number 1. Display example: CODE-01:.....4. Enter an area code. To delete the current entry, press CLEAR. To change the current entry, press CLEAR and enter the new area code.5. Press STORE.6. To program another code number, press NEXT or PREV, or SELECT and enter the desired code number.7. Repeat steps 4 through 6.8. Press END.
Condition	<ul style="list-style-type: none">• The area code can be six digits long. Valid numbers are from 0 to 9.
Feature References	Section 3, Features Call Log, Incoming Caller ID

*Caller ID Modification for Local Calls***Description**

Assigns the removed digits from a received local caller's number, and adds a number to make the final number which serves as the Caller ID number. The system records the modified caller's number in the incoming call log list so that the extension user can call back the caller.

Digits are removed from or added to the beginning of the received number.

Selection

- Number of digits to be deleted: **0 – 9** (0 = no deletion)
- Number to be added: **4 digits (max.)**

Default

Deleted digits – 3; Added number – blank

Programming

1. Enter **902**.

Display: CID Local Call

2. Press **NEXT**.

Display example: Del:3 Add:....

3. Enter the **number of digits to be deleted**.

To change the current entry, press **CLEAR** and enter the new number.

4. Press **➡** to program the number to be added, if required.

5. Enter the **number to be added**.

To change the current entry, press **CLEAR** and enter the new number.

6. Press **STORE**.

7. Press **END**.

Condition

- The added number has a maximum of 4 digits, consisting of **0 – 9, *** and **#**.

[903]	Caller ID Modification for Long Distance Calls	Deleted digits — 0; Added number — 1
[904]	Caller ID Log Priority Selection	All jacks — Name
[906]	Caller ID SMDR Format	With CID
[907]	Caller ID SMDR Printout Selection	Disable
[908]	Caller ID Call Waiting Time	30 s
[909]	Common Area Call Log Check Assignment	All jacks — Enable
[913]	Caller ID Call Waiting Assignment	All outside (CO) lines — Enable
[914]	Caller ID Call Waiting CAS Receive Time	Mode 3
[915]	Caller ID Checksum	Enable
[963]	Call Forwarding Selection	All jacks — Disable
[968]	Incoming Lamp Control	Disable
[998]	ROM Version	Not applicable.
[999]	System Data Clear	Not applicable.

Section 6

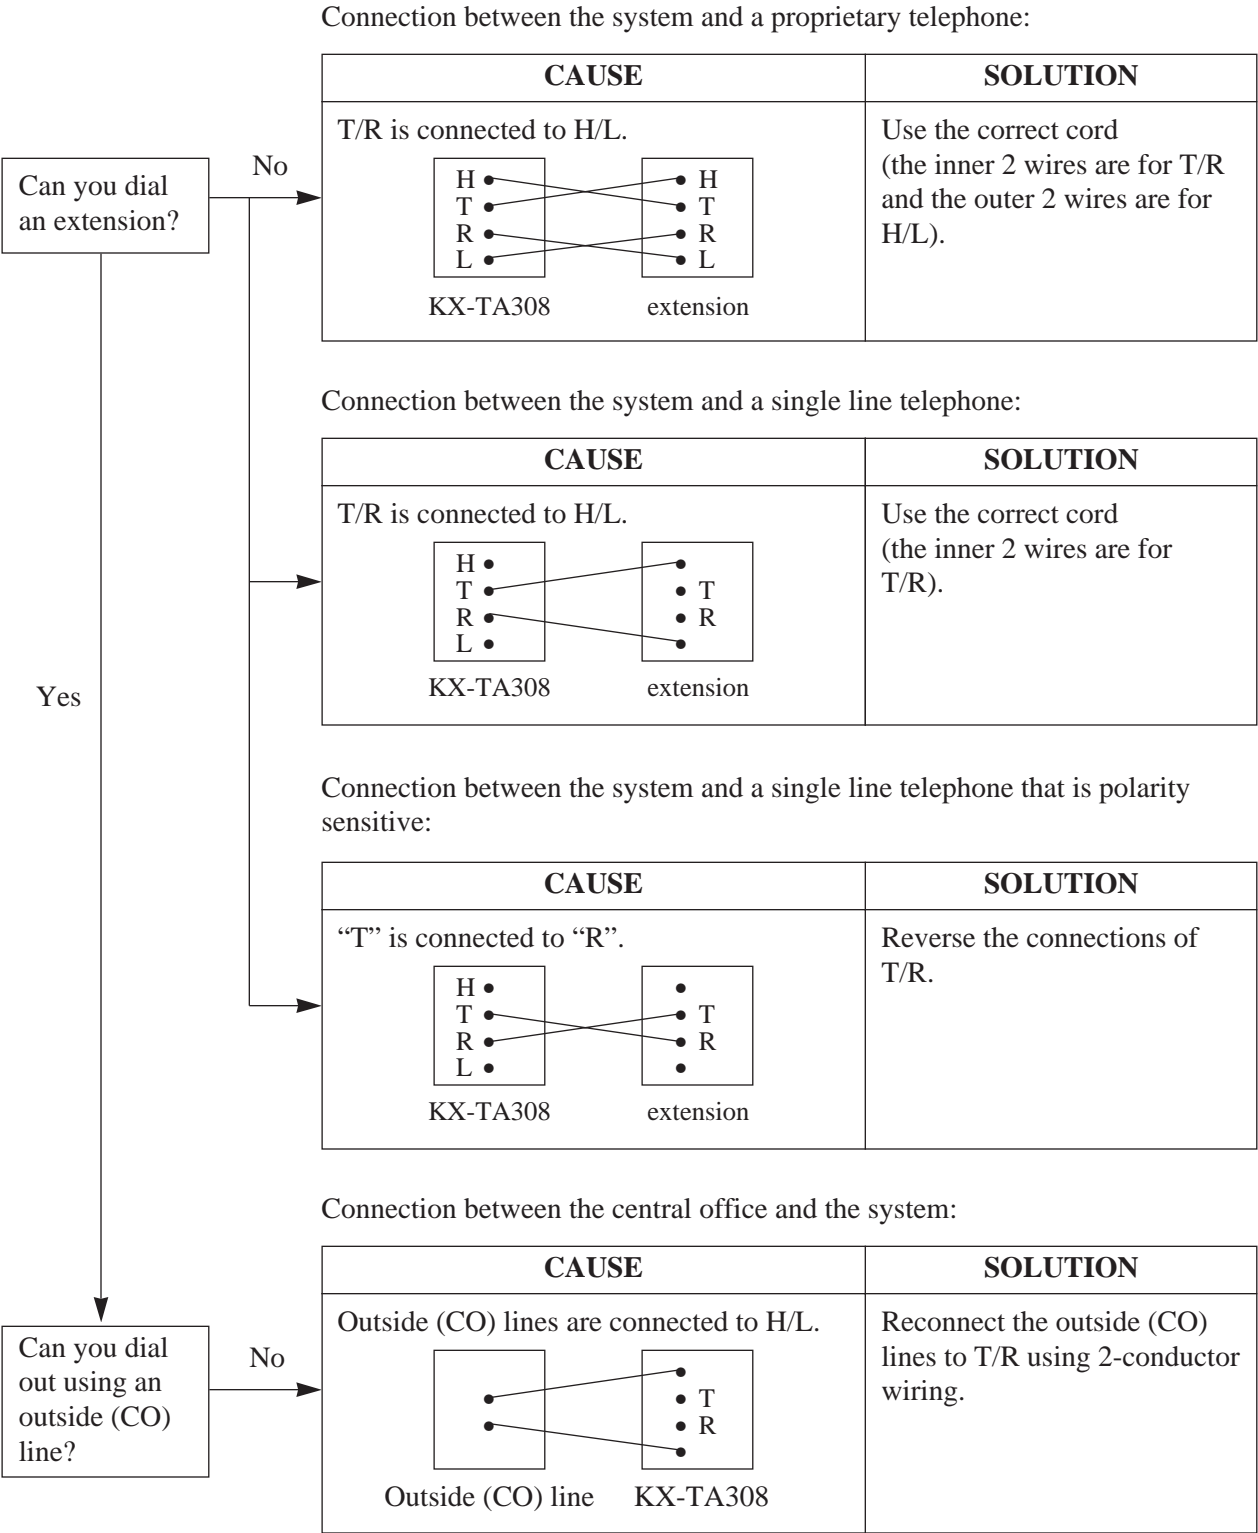

Troubleshooting

This section provides information for system
and telephone troubleshooting.

6.1 Installation

PROBLEM	PROBABLE CAUSE	POSSIBLE SOLUTION
Extension does not operate.	Something is wrong with the connection between the system and extension. A telephone with an A-A1 relay is connected. Something is wrong with the extension.	Take the extension and plug it into the same extension port using a short telephone cord. If the telephone works correctly, the connection between the system and the extension must be repaired. Use a 2 wire cord. Set the A-A1 relay switch on the telephone to the “OUT” or “OFF” position. Take the extension and plug it into another extension port that is working. If the telephone does not work, replace the phone.
Improper reset operation.		Turn the Power Switch off and on.
Noise during external paging.	Induced noise on the wire between the system and the amplifier.	Use a shielded cable as the connection wire between the system and amplifier. A short shielded cable is recommended.
Volume distortion from external music source.	Excessive input level from external music source.	Decrease the output level of the external music source by using the volume control on the music source.
Speed Dialing or One-Touch Dialing does not function.	Wrong programming.	Enter an outside (CO) line access number (9, 81 through 83) in programming.
A proprietary telephone connected to extension jacks 01 through 08 does not operate, but a single line telephone operates.	An extension (H, L) jack 01 through 08 may have been shorted.	Turn the Power Switch off and fix the shorted part, then turn the Power Switch on.

6.2 Connection

6.3 Operation

PROBLEM	PROBABLE CAUSE	POSSIBLE SOLUTION
The unit does not ring.	<ul style="list-style-type: none">• An outside (CO) line number is not programmed.• The Ringer Volume Selector is set to “OFF”.	<ul style="list-style-type: none">• Program outside (CO) line numbers.• Set to “HIGH” or “LOW”.
During a power failure, the extension connected to JACK 01 does not operate.	A PT is connected to the jack.	Disconnect the PT and connect a single line telephone.
Originating an outside call cannot be performed.	The corresponding CO button does not exist on the proprietary telephone.	Program the CO button. See the Flexible Button Assignment in the User Manual.
A tone type single line telephone (SLT) user cannot make a call.	There may be something wrong with a DTMF receiver.	<ol style="list-style-type: none">1. Select “Enable” for DTMF receiver 1 and “Disable” for DTMF receiver 2 in program [107].2. Make a call using a tone type SLT connected to one of extension jacks 01 – 08.3. If you cannot make the call, the problem may have been caused by DTMF receiver 1. If the call can be made, go to step 4.4. Try DTMF receiver 2. Select “Disable” for DTMF receiver 1 and “Enable” for DTMF receiver 2 in program [107], and make another call. If you cannot make the call, the problem may have been caused by DTMF receiver 2.

Section 7

Programming Tables

This section provides a reference for entering user-programmed data.
