

High Power Density 0.5W Laser Diode

Description

The SLD322V is a high power, gain-guided laser diode produced by MOCVD method*1. Compared to the SLD300 Series, this laser diode has a high brightness output with a doubled optical density which can be achieved by QW-SCH structure*2.

*1 MOCVD: Metal Organic Chemical Vapor Deposition

*2 QW-SCH: Quantum Well Separate Confinement Heterostructure

Features

- High power
Recommended optical power output: Po = 0.5W
- Low operating current: Iop = 0.75A (Po = 0.5W)

Applications

- Solid state laser excitation
- Medical use
- Material processes
- Measurement

Structure

GaAlAs quantum well structure laser diode

Absolute Maximum Ratings (Tc = 25°C)

Handling Precautions

Eye protection against laser beams

The optical output of laser diodes ranges from several mW to 3W. However the optical power density of the laser beam at the diode chip reaches 1MW/cm². Unlike gas lasers, since laser diode beams are divergent, uncollimated laser diode beams are fairly safe at a laser diode. For observing laser beams, ALWAYS use safety goggles that block infrared rays. Usage of IR scopes, IR cameras and fluorescent plates is also recommended for monitoring laser beams safely.
