### description

The TPIC5323L is a monolithic gate-protected logic-level power DMOS array that consists of three electrically isolated independent N-channel enhancement-mode DMOS transistors. Each transistor features integrated high-current zener diodes ( $Z_{CXa}$  and  $Z_{CXb}$ ) to prevent gate damage in the event that an overstress condition occurs. These zener diodes also provide up to 4000 V of ESD protection when tested using the human-body model of a 100-pF capacitor in series with a 1.5-k $\Omega$  resistor.

The TPIC5323L is offered in a standard 16-pin small-outline surface-mount (D) package and is characterized for operation over the case temperature of  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ .
