

DPX-1200

Digital Cinema Projector

IMPORTANT SAFETY INSTRUCTIONS

CAUTION

RISK OF ELECTRIC SHOCK
DO NOT OPEN

CAUTION: TO REDUCE THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER (OR BACK). NO USER-SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

• Explanation of Graphical Symbols

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert you to the presence of uninsulated “dangerous voltage” within the product’s enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert you to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

WARNING

TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS UNIT TO RAIN OR MOISTURE.

IMPORTANT!

Please record the serial number of this unit in the space below.

Model:

Serial No.:

The serial number is located on the bottom of the unit.

Retain this Owner’s Manual in a safe place for future reference.

OBSERVERA

Apparaten kopplas inte bort från växelströmskällan (nätet) så länge som den är ansluten till vägguttaget, även om själva apparaten har stängts av.

ADVARSEL

Netspændingen til dette apparat er IKKE afbrudt, så længe netledningen sidder i en stikkontakt, som er tændt – også selvom der er slukket på apparatets afbryder.

VAROITUS

Laitteen toisiopiiriin kytketty käyttökytken ei irroita koko laitetta verkosta.

- 1 Read these instructions.
- 2 Keep these instructions.
- 3 Heed all warnings.
- 4 Follow all instructions.
- 5 Do not use this apparatus near water.
- 6 Clean only with dry cloth.
- 7 Do not block any ventilation openings. Install in accordance with the manufacturer’s instructions.
- 8 Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
- 9 Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
- 10 Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
- 11 Only use attachments/accessories specified by the manufacturer.
- 12 Use only with the cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.
- 13 Unplug this apparatus during lightning storms or when unused for long periods of time.
- 14 Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.
- 15 Be sure to allow spaces of at least 30cm above, behind and on both sides the unit.
- 16 Do not place the following objects on this unit:
A vessel with water in it. If the vessel falls by vibrations and water spills, it may cause damage to the unit, and/or you may get an electric shock.

Alleen voor klanten in Nederland

Bij dit product zijn batterijen geleverd. Wanneer deze leeg zijn, moet u ze niet weggooien maar inleveren als KCA.

COMPLIANCE INFORMATION STATEMENT

(DECLARATION OF CONFORMITY PROCEDURE)

Responsible Party: Yamaha Electronics Corporation
Address: 6660 Orangethorpe Avenue
Buena Park, CA90620
Telephone: 714-522-9105
Fax: 714-670-0108
Type of Equipment: Projector
Model Name: DPX-1200

This device complies with Part 15 of the FCC Rules.

Operation is subject to the following conditions:

- 1) this device may not cause harmful interference, and
 - 2) this device must accept any interference received including interference that may cause undesired operation.
- See the user manual instructions if interference to radio reception is suspected.

FCC INFORMATION (for US customers only)

1. IMPORTANT NOTICE: DO NOT MODIFY THIS UNIT!

This product, when installed as indicated in the instructions contained in this manual, meets FCC requirements. Modifications not expressly approved by Yamaha may void your authority, granted by the FCC, to use the product.

- 2. IMPORTANT:** When connecting this product to accessories and/or another product use only high quality shielded cables. Cable/s supplied with this product **MUST** be used. Follow all installation instructions. Failure to follow instructions could void your FCC authorization to use this product in the USA.

- 3. NOTE:** This product has been tested and found to comply with the requirements listed in FCC Regulations, Part 15 for Class "B" digital devices. Compliance with these requirements provides a reasonable level of assurance that your use of this product in a residential environment will not result in harmful interference with other electronic devices.

This equipment generates/uses radio frequencies and, if not installed and used according to the instructions found in the users manual, may cause interference harmful to the operation of other electronic devices.

Compliance with FCC regulations does not guarantee that interference will not occur in all installations. If this product is found to be the source of interference, which can be determined by turning the unit "OFF" and "ON", please try to eliminate the problem by using one of the following measures:

Relocate either this product or the device that is being affected by the interference.

Utilize power outlets that are on different branch (circuit breaker or fuse) circuits or install AC line filter/s.

In the case of radio or TV interference, relocate/reorient the antenna. If the antenna lead-in is 300 ohm ribbon lead, change the lead-in to coaxial type cable.

If these corrective measures do not produce satisfactory results, please contact the local retailer authorized to distribute this type of product. If you can not locate the appropriate retailer, please contact Yamaha Electronics Corp., U.S.A. 6660 Orangethorpe Ave, Buena Park, CA 90620.

The above statements apply **ONLY** to those products distributed by Yamaha Corporation of America or its subsidiaries.

We Want You Listening For A Lifetime

YAMAHA and the Electronic Industries Association's Consumer Electronics Group want you to get the most out of your equipment by playing it at a safe level. One that lets the sound come through loud and clear without annoying blaring or distortion – and, most importantly, without affecting your sensitive hearing. Since hearing damage from loud sounds is often undetectable until it is too late, YAMAHA and the Electronic Industries Association's Consumer Electronics Group recommend you to avoid prolonged exposure from excessive volume levels.

Caution: Read this before operating this unit.

- To assure the finest performance, please read this manual carefully. Keep it in a safe place for future reference.

Installation

- Install this unit in a well-ventilated, cool, dry, clean place with at least 30 cm (1 feet) clearance on the top, right and left, and at the back of this unit — away from direct sunlight, heat sources, vibration, dust, moisture, and/or cold.
- Locate this unit away from other electrical appliances, motors, or transformers to avoid humming sounds. To prevent fire or electrical shock, do not place this unit where it may get exposed to rain, water, and/or any type of liquid.
- Do not expose this unit to sudden temperature changes from cold to hot, and do not locate this unit in an environment with high humidity (i.e. a room with a humidifier) to prevent condensation inside this unit, which may cause an electrical shock, fire, damage to this unit, and/or personal injury.
- On the top of this unit, do not place:
 - Other components, as they may cause damage and/or discoloration on the surface of this unit.
 - Burning objects (i.e. candles), as they may cause fire, damage to this unit, and/or personal injury.
 - Containers with liquid in them, as they may cause electrical shock to the user and/or damage to this unit.
- Do not cover this unit with a newspaper, tablecloth, curtain, etc. in order not to restrict heat dissipation. If the temperature inside this unit rises too much, it may cause fire, damage to this unit, and/or personal injury.
- When installing this unit on the ceiling, make sure the ceiling has sufficient strength to support this unit and the ceiling mounts for an extended period of time. Installation must be performed only by qualified service personnel.

Operation

- Remove the lens cover before starting any operation of this unit to prevent the heat from staying around the lens. Operation with the cap on may cause damage to this unit.
- Do not plug in this unit to a wall outlet until all connections are complete.
- Only the voltage specified on this unit must be used. Using this unit with a higher voltage than specified is dangerous and may cause fire, damage to this unit, and/or personal injury. YAMAHA will not be held responsible for any damage resulting from use of this unit with a voltage other than that specified.
- Do not use force on switches, knobs and/or cords.
- Take care of this unit so that no foreign objects and/or liquid drop inside this unit.
- To prevent damage by lightning, disconnect the power cable from the wall outlet during an electrical storm.
- Do not look into the lens while this unit is turned on. It may cause serious damage to your eyesight.
- Before moving this unit, press **STANDBY/ON** to set this unit in the standby mode, and disconnect the AC power plug from the wall outlet.
- Do not attempt to modify or fix this unit. Contact qualified YAMAHA service personnel when any service is needed. The cabinet should never be opened for any reason.

- When not planning to use this unit for a long period of time (i.e. vacation), disconnect the AC power plug from the wall outlet.
- When disconnecting the power cord from the wall outlet, grasp the plug; do not pull the cable.
- Be sure to read the “Troubleshooting” section on common operating errors before concluding that this unit is faulty.

Others

- Clean the lens carefully so as not to create any scratches by using a blower or lens paper.
- Replace the lamp when the LAMP warning indicator blinks in red after the lamp usage has exceeded 2000 hours. Follow the lamp replacement procedure described in this manual.

For U.K. customers

If the socket outlets in the home are not suitable for the plug supplied with this appliance, it should be cut off and an appropriate 3 pin plug fitted. For details, refer to the instructions described below.

Note

- The plug severed from the mains lead must be destroyed, as a plug with bared flexible cord is hazardous if engaged in a live socket outlet.

IMPORTANT

THE WIRES IN THIS MAINS LEAD ARE COLOURED IN ACCORDANCE WITH THE FOLLOWING CODE:

GREEN-AND-YELLOW:	EARTH
BLUE:	NEUTRAL
BROWN:	LIVE

As the colours of the wires in the mains lead of this apparatus may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:

The wire which is coloured GREEN-AND-YELLOW must be connected to the terminal in the plug which is marked by the letter E or by the safety earth symbol or coloured GREEN or GREEN-and-YELLOW.

The wire which is coloured BLUE must be connected to the terminal which is marked with the letter N or coloured BLACK.

The wire which is coloured BROWN must be connected to the terminal which is marked with the letter L or coloured RED.

For Canadian customers

To prevent electric shock, match wide blade of plug to wide slot and fully insert.

This Class B digital apparatus complies with Canadian ICES-003.

1 Getting started

◆ Inappropriate places for installation

If this unit is not correctly installed in an appropriate place, it may cause fire or failure, or damage the unit itself. Carefully choose the place to install this unit by avoiding the places listed below.

1. Places where the temperature and humidity vary greatly

- Do not install this unit in a place where the temperature and humidity become extremely high or the temperature becomes extremely low.
- This unit must be used within a temperature range of 5 to 35°C.

2. Places without adequate ventilation

- Install this unit with at least 30 cm (1 foot) of ventilation space on the top, right and left, and back.
- Do not cover the ventilation slots of this unit. Covering the slots will obstruct heat dissipation.
- Install this unit on the firm surface.
- Do not cover this unit with a tablecloth, etc.
- Make sure there is nothing to get sucked into the ventilation slots so that the temperature of this unit does not become too high.
- If you are going to install the unit in a rack, be sure to leave space for ventilation to prevent exhaust overheating the unit.

3. Places where it gets dusty

- If the filter is blocked with dust, the temperature of this unit may become too high.

4. Places with too much vibration or impact

- Vibration and impact can damage parts of this unit.

5. Places where this unit gets exposed to water or high humidity

- If this unit is exposed to water or high humidity, it may cause a fire or electrical shock.

6. Unstable places

- If this unit is installed on an unstable or an inclined tabletop, it may fall and cause damage to the unit or personal injury.

7. In close proximity to a Radio or Stereo

- The unit may interfere with reception if placed in close proximity to a radio or television receiver.

Warning

- To ensure vivid, high contrast images, make sure that no light other than the projector light falls directly on the screen.

◆ Accessory check

Please check that all accessories listed here are included in your package.

• Remote control

• Batteries (AA, UM-3 or R6)

• Power cable

• Trigger-out DC plug
(For USA only)

• Pin/BNC adapters

• Lens cap

Highly configurable electronic adjustment gives you the freedom to place the projector wherever you want

A short focal length, high power zoom, and fully vertically adjustable lens allow you to use the projector in a wide range of environments. You can also use the remote control to access many lens functions such as focus, zoom, and lens shift to fine-tune the projector from your viewing position.

Uses the DMD™ device 720p DarkChip3™

The projector uses the high contrast “720p DarkChip3™”, to reduce black levels even further and reproduce contrasts close to that of a film.

Adjust 7 colors independently (including white), or use the automatic color balance function

The DPX-1200 allows you to adjust the 7-axis WRGBYCM color coordinate and gain parameters directly. For better consistency, you can also control color temperature and RGB balance together, allowing you to check that the changes you make are always consistent with your preferences.

The digital interface provides sharp, detailed images

The DPX-1200 is equipped with an HDMI terminal, which is set to become the standard for the coming generation of products. Connect to a DVD player or set-top box with a HDMI terminal to receive digital image data directly, and enjoy completely digitally processed images. Compatible with the content protection function of HDCP.

Intelligent memory functions

The DPX-1200 can store six image memory settings, called memory numbers, for each input jack. For each memory number, you can set parameters for different input resolutions, and the unit will switch to the appropriate parameters when it begins displaying an image of an appropriate resolution. For example, the unit automatically changes display settings without changing memory numbers when you change from watching a DVD to watching a HDTV image for which you have set different image menu item parameters.

In-line menus for image adjustment

You can access image adjustment menu items at the touch of a button, and adjust images while viewing them without opening the menu screen.

3 Controls and functions

◆ Main unit <Front panel and controls>

1 LED Indicators

The main unit is equipped with 5 indicators to display various states of operation. See page 61 for explanations of the LED indicator meanings.

- A STANDBY/ON indicator
(There is also an LED on the front panel of the main unit.)
- B LAMP warning indicator
- C COVER warning indicator
- D TEMP warning indicator
- E FAN warning indicator

2 STANDBY/ON button

Switches the unit between Standby and On (operational) modes.

3 ESCAPE button

Exits from submenus.

4 PATTERN button

Switches the built-in test pattern on and off.

5 ASPECT button

Turns the display aspect menu for the project image on and off.

6 (Enter) button

Sets values when the DPX-1200 is displaying the menu. When the menu is not displayed, the DPX-1200 displays the in-line image quality adjustment menu. (ⓘ page 40)

7 MENU button

Switches the settings and adjustments menu display on and off.

8 SETTING button

Selects lens adjustment modes.

9 INPUT button

Switches the input signal selection menu display on and off.

10 Cursor buttons

Use the Δ , ∇ , $+$, $-$ buttons for system operations, menu item selection, and changing system values.

◆ Main unit <Rear panel / Connections>

❶ INPUT B (D-sub 15 pin)

Receives component video and RGB (RGB/YPbPr/YCbCr) signals. Use a D-sub monitor cable to connect components to this jack.

❷ D4 VIDEO (D jack)

Receives signals output from the D jacks of other AV components. It is compatible with D1 - D4 formats.

❸ - ❷ INPUT A (BNC jacks)

Receive component video and RGB signals. Connect component signal connectors from AV components to input jacks ❸ - ❷, and RGB signal connectors from computers to input jacks ❸ - ❷. Use BNC cables for these connections.

- ❸ G/Y (G, or luminance signal)
- ❹ B/Pb/Cb (B, or color difference signal)
- ❺ R/Pr/Cr (R, or color difference signal)
- ❻ HD/SYNC (Horizontal sync signal, composite sync signal)
- ❼ VD (Vertical sync signal)

❽ S VIDEO (Mini DIN jack)

Receives signals from S-VIDEO output jacks of other AV components. Use an S-VIDEO cable for these connections.

❾ AC inlet

Insert the supplied AC power cable here.

❿ VIDEO (Pin Jack)

Receives composite video signals from the VIDEO output jacks of other AV components. Use a video pin cable for these connections.

⓫ HDMI™ (HDMI™ jack)

Receives HDMI™ signals from computers or AV components.

⓬ REMOTE IN / OUT jack

Connect the remote control to the REMOTE IN jack if you want to use it through a cable. The REMOTE OUT jack outputs the signal received through the REMOTE IN jack without any change.

⓭ RS-232C (D-sub 9 pin)

For use in servicing this unit.

⓮ TRIGGER OUT

Outputs control signals to external components. This output provides a potential of 12 V/ maximum 200 mA when this unit is projecting. Use the supplied trigger-out DC plug (for US model only) to control external components.

4 Remote control

◆ Remote control functions

Buttons on the remote control with identical names to those on the main unit perform identical functions. When using the remote control, point it at the remote control sensor on the front or back of the main unit from a distance of 7m (23 feet) or less.

1 Transmit indicator

Lights up when the remote control sends infrared signals to the main unit.

2 AUTO button

Automatically sets the DPX-1200 to the best settings for the type of signal it is currently receiving.

3 V.POS button

Switches on or off the vertical adjustment mode for the entire image.

4 ZOOM button

Switches on or off the size adjustment mode for the image the DPX-1200 is projecting.

5 IRIS button

Switches on or off the lens iris change mode.

6 ESCAPE button

Exits from submenus.

7 Cursor buttons

Use the Δ , ∇ , $+$, $-$ buttons to move the cursor within the on-screen display.

8 ASPECT button

Turns the display aspect menu for the project image on and off.

9 RESET button

Resets all adjustable parameters to their default settings. Also you can display information about this unit by pressing and holding the button for five seconds while the menu screen is not displayed.

10 STILL button

Stops a moving image, displaying a still of the image the DPX-1200 is projecting. Press STILL again to cancel this effect.

11 INPUT area

Selects the INPUT jacks directly.

12 MEMORY area

Calls stored memory (all parameter settings) directly.

13 P/I button

Switches the unit between Standby and On (operational) modes.

14 FOCUS button

Switches on or off the focus adjustment mode for the image the DPX-1200 is projecting.

15 PATT (PATTERN) button

Switches on and off the built-in test pattern.

16 MENU button

Switches on and off the settings and adjustments menu display.

17 (Enter) button

Sets values when the DPX-1200 is displaying the menu. When the menu is not displayed, the DPX-1200 displays the in-line image quality adjustment menu. (page 40)

18 INPUT button

Switches on and off the input signal selection menu display.

19 LIGHT switch

Moving this switch lights the high-use AUTO (2), ESCAPE (6), ASPECT (8), P/I (13), MENU (16), and INPUT (18) buttons. The light disappears if you do not perform any operation within 10 seconds.

20 HIDE button

Temporarily halts projection of the image the DPX-1200 is currently displaying. Press again to cancel this effect.

21 Remote control code switch

Selects ID-1 or ID-2 when operating two main units with one remote control. You can set the ID for the main unit in the menu (The default setting is ID-1).

22 Remote control cable jack

Connect this jack and REMOTE IN jack on the main unit using a cable (commercially available) to use the remote control with a wired connection. (see page 8)

◆ Loading the batteries into the remote control

1. Remove the battery compartment cover.
2. Insert two batteries (AA, UM3, or R6 type), matching the polarity markings on the batteries with those in the battery compartment.
3. After loading the batteries, close the cover until it snaps into place.

Warning

- If the remote control must be used closer to the main unit than normal, or does not always operate correctly, exchange the batteries for new ones.
- Do not mix old and new, or different types of batteries.
- Remove the batteries if you do not plan to use the unit for a long time.
- If the batteries leak, dispose of them immediately, taking care not to touch the battery fluid. If the battery fluid comes into contact with your eyes, mouth, or skin, rinse it off with water immediately and consult a doctor. Clean the battery compartment thoroughly before installing new batteries.

◆ Using the remote control with a wired connection

Use a 2P monaural miniplug cable (commercially available) to connect the remote control jack on the underside of the remote control to the REMOTE IN jack on the main unit. Use the wired remote control configuration to control the DPX-1200 without having to be within range of the remote sensor.

◆ Limits for using the remote control

Use the remote control within the following parameters. The remote control may not function correctly if you use it outside the limits described here.

Distance to sensor	Angle to sensor
7 m (approximate value)	30° vertically and horizontally (approximate value)

Use within a left/right arc of 30 degrees

Use within a vertical arc of 30 degrees

Warning

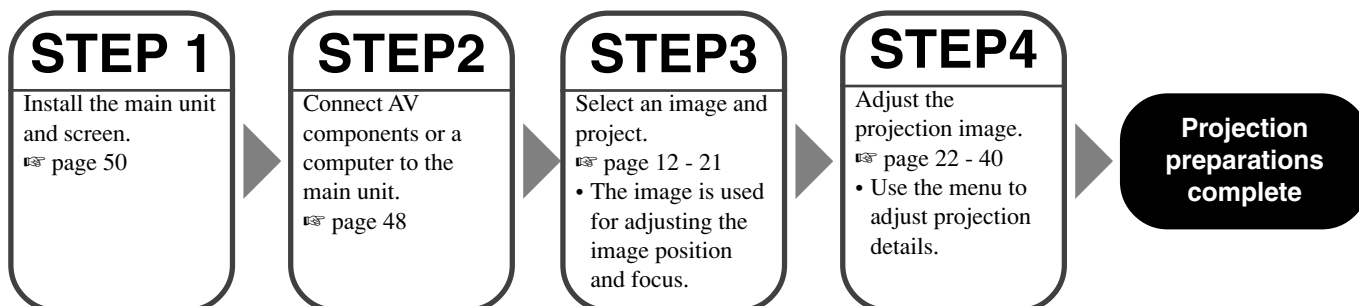

- Bright or fluorescent light on the main unit remote sensor may inhibit the functioning of the remote control.
- Objects placed between the main unit remote sensor and the remote control may block the remote control signal and inhibit functioning.

5 Preparation

Before projection, install the main unit and a screen, connect the main unit to an AV component or computer, and adjust the projection image. You can begin projection as soon as installation is complete. Refer to the sections below for information on how to install the main unit to suit your viewing environment.

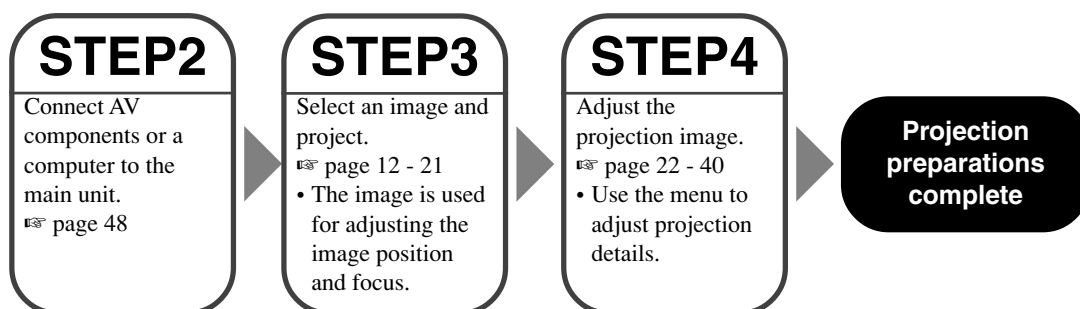

◆ If you have not installed the main unit or screen

- Immediately after purchase, when you have not installed either the main unit or a screen.
- When moving the main unit and screen to a new location.

◆ If you have installed the main unit and screen, but not connected any image playback components

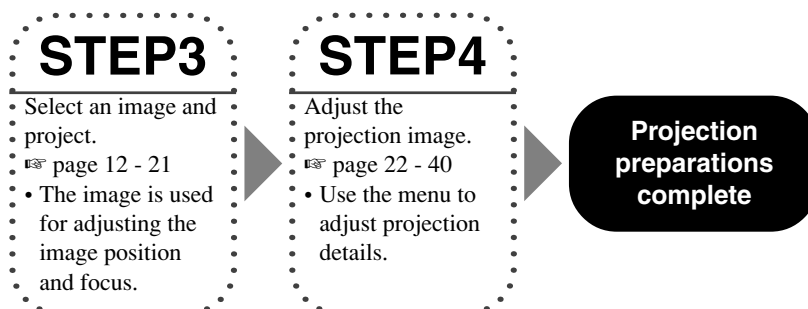

- You have installed the main unit and screen, but not connected any source components.
- You are using the main unit in a previously installed location, and wish to change the component you use as a signal source.

◆ If you have installed the main unit and screen, and connected a source component

- You have installed the main unit and screen, and connected source components.
- You are using the main unit in a previously installed location with previously connected source components.

You do not need to carry out step 3 or step 4 if you do not want to adjust the projection image. If the unit does not project the image correctly, it may not be connected correctly. In this case, carry out this procedure starting from step 2.

Step1

Set up the projector and screen

- Install the projector
- Install the screen  page 50

Step2

Connect an AV component or computer

- Connect AV components
- Connect a computer  page 48

Step3

Turn the power on and selecting an image for projection

- Turn on the projector power
- Begin playback of the input image
- Select an input signal
- Select a projection image aspect
- Adjust the image
Focus/Vertical and Horizontal position/Size/Iris
 page 12 - 21

Step4

Use the menu to adjust the image quality and other parameters

- Image quality: Set image quality details
- Signal setting: Set input signal details
- Default settings: Set the default settings for everyday use
- Installation settings: Set to suit your viewing environment  page 22 - 40

Only adjust these parameters when necessary. It is not necessary to adjust these settings once you have set them initially.

6 Projection

Checking installation and connections

◆ Pre-operation check

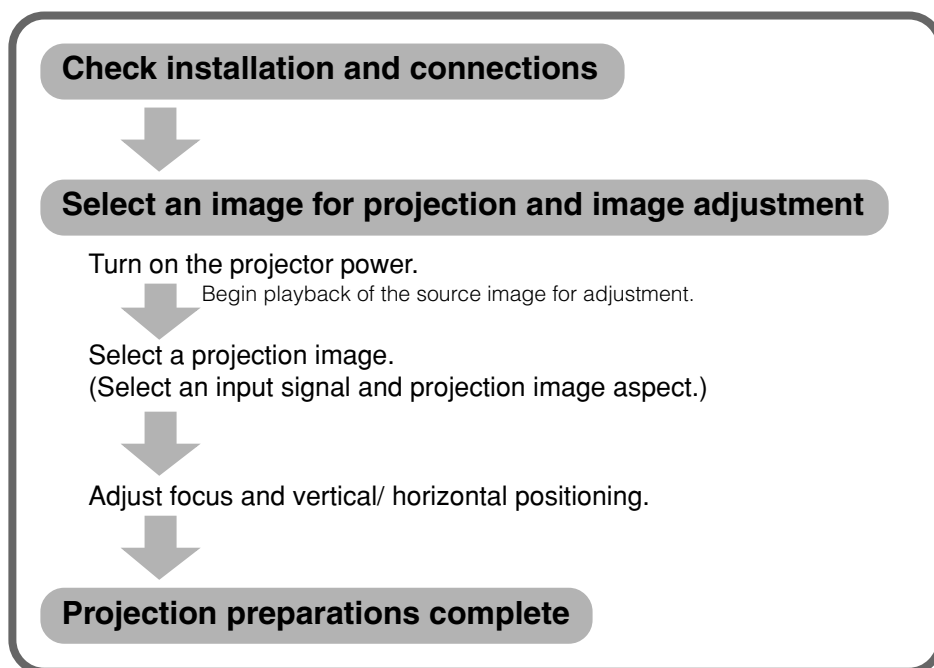

Prior to projection, adjust settings to suit the location of the main unit and screen, and the input signal you are using.

However, there is usually no need to adjust any settings if you have not changed the installation location or components since the last time you used this unit. Check settings and connections only when the unit does not appear to project images correctly.

Prior to projection, check that the main unit and screen are correctly installed, and that source components are connected correctly.

To project images, carry out the following procedure.

For an explanation of detailed settings, see “Menu”. page 22 - 40

Turning the projector power on

◆ Turning the power on

Always remove the lens cap before operating the main unit.

1. Insert the supplied power cable firmly into the AC inlet at the rear of the main unit, then insert the plug into an AC outlet.

The STANDBY/ON indicator lights orange.

2. Press the STANDBY/ON button (the  button on the remote control).

The indicator blinks green and the lamp lights up in preparation for projection. After approximately 35 seconds, the indicator changes from blinking to solid green, indicating that the unit is ready to project.

Warning

- Do not remove the power cable while the STANDBY/ON indicator is blinking green or lit steady green. This could damage the lamp or reduce lamp life.

◆ Placing the DPX-1200 in standby mode

1. Press the STANDBY/ON button.

A confirmation message appears on the screen.

2. If you wish to place the DPX-1200 in standby mode, press the STANDBY/ON button again.

The lamp changes to a half lit state, and the fan activates for 2 minutes to cool the lamp. During this time, the STANDBY/ON indicator blinks orange, and pressing STANDBY/ON does not turn main unit power on again. When the unit finishes cooling, the fan stops, and the STANDBY/ON indicator turns orange.

Memo

- The lamp may blink when half lit. This is not a defect.

Warning

- Do not remove the power cable while the STANDBY/ON indicator is blinking green or when the fan is activated. This could damage the lamp or reduce lamp life.
- If you do not plan to use the main unit for a long period of time, attach the lens cap and remove the plug from the AC outlet.
- Condensation may appear on the unit if the temperature of the surrounding environment changes quickly. Condensation may also cause the projected image to be cloudy. Place the unit in standby mode until the condensation disappears. Switching the unit on when condensation is present may damage the unit.

Selecting an input signal

◆ Selecting using the INPUT button

Press the INPUT button to select an input signal from a source component. Choose from the following:

INPUT SIGNAL	Projection image signal
VIDEO	Selects component video signals received from AV components connected to the VIDEO jack.
S VIDEO	Selects S-Video signals received from AV components connected to the S VIDEO jack.
INPUT A	<ul style="list-style-type: none">• Component : Selects component signals received from the INPUT A BNC jacks.• RGB PC : Selects RGB signals received from computers connected to the INPUT A BNC jacks.• RGB TV : Selects RGB signals received from AV components connected to the INPUT A BNC jacks.
INPUT B	<ul style="list-style-type: none">• Component : Selects component signals received from the INPUT B D-sub 15 pin jack.• RGB PC : Selects RGB signals received from computers connected to the INPUT B D-sub 15 pin jack.• RGB TV : Selects RGB signals received from AV components connected to the INPUT B D-sub 15 pin jack.
HDMI	<ul style="list-style-type: none">• Auto : Signals input to the HDMI jack from AV components (automatically distinguishes between component and RGB signals).• Component : Selects digital component signals received from AV components connected to the HDMI jack.• RGB TV : Selects digital RGB signals received from AV components connected to the HDMI jack.
D4 VIDEO	Selects component signals received from AV components connected to the D4 VIDEO jack.

<Using the INPUT button to select a signal>

1. Press the INPUT button.

The input signal selection menu appears on the display.

Input signal

D4	

Memo

- If you set your laptop or notebook computer to display on its built-in display and on an external monitor simultaneously, the main unit may not project the image correctly. In this case, set your computer to display on the external monitor only. Refer to your computer's operating instructions for further details.

◆ Selecting a display aspect for a projection image

The display aspect parameter sets the ratio of height to width the unit uses to project an image for an input signal.

1. Press the ASPECT button.

The display aspect selection menu appears on the display.

Display Aspect Ratio
Auto
Normal

Through

Memo

- The display aspect you can use depends on the current input signal. When the input signal contains display aspect information, set the display aspect parameter to [Auto] to detect the appropriate display aspect setting automatically.
- You can also use the [Display Aspect Ratio] page in the menu screen to select a display aspect. (p. 22- 40)

<Display aspect types>

Memo

- Refer to the glossary for explanations of terms such “letterbox” or “squeeze”. (page 53)

Auto

Detects information encoded in letterbox or squeeze type input signals and automatically selects an appropriate display aspect. Depending on the input source, the unit may not change to the most appropriate mode. In this case, manually select a suitable setting.

Normal

Projects images with their original display aspect. Depending on the input signal, black areas may appear to the left and right of the image.

Squeeze

Returns horizontally compressed images to their original aspect. Use this mode to display horizontally squeezed images in a normal wide aspect manner.

Smart Zoom

Stretches the left and right edges of a 4:3 image without altering the image center, to project a 16:9 image that fills the screen.

Zoom

Projects images the unit receives in letterbox format as 16:9 images that fill the screen.

Special**Subtitle Zoom**

The best format for projecting subtitled letterbox format software. See page 38 for the operational procedure.

- Subtitle area: Adjust the area used to display subtitles on screen.
- V Scroll: Adjusts the vertical position of the subtitles.

Cinema Zoom

Removes the black bar from Cinescope size screens (2.35:1) to display a full horizontal image, cutting both screen sides. There are two types: SDTV for 4:3 images, and HDTV for 16:9 images.

Cinema Squeeze

Removes the black bar from cinescope size screens for 4:3 images and resize the vertical image so that a 16:9 panel resolution is fully displayed, cutting both screen sides.

14:9 Zoom

Displays 14:9 images with a full vertical aspect, retaining the black area at either side of the screen.

Through**Normal Through**

Projects images without stretching or reducing them. The size of the projection image depends on the resolution of the image received.

Squeeze Through

Widens the image received to project it with a 16:9 aspect ratio. The size of the projection image depends on the resolution of the image received. This mode is not available for RGB PC input signals.

<Representative examples>

Input signal type	Input image		Display aspect	Projected image
Standard 4:3 image			Normal	
			Smart Zoom	
Letter box			Zoom	
			Subtitle Zoom	
			Cinema Zoom	
Squeeze			Squeeze	
			Squeeze	
			Cinema Squeeze	
14:9 image			14:9 Zoom	
HDMI	Normal		Normal	
	Cinema Scope		Cinema Zoom	
RGB PC			Normal	
All	Normal		Normal Through	
	Squeeze		Squeeze Through	

Adjusting the image

Carry out the following adjustments to obtain optimal projection conditions.

◆ Using test patterns to adjust the projection image – PATT button

The DPX-1200 is equipped with three test patterns, the crosshatch pattern necessary for focus and keystone adjustment, and the grayscale and color bar patterns necessary for adjusting image quality.

1. Press the PATT button on the remote control, or the PATTERN button on the main unit.
2. Press the + or - button to select the necessary pattern.
3. To exit from the test display, press the PATT or PATTERN button.

Crosshatch pattern

Grayscale pattern

Color bar pattern

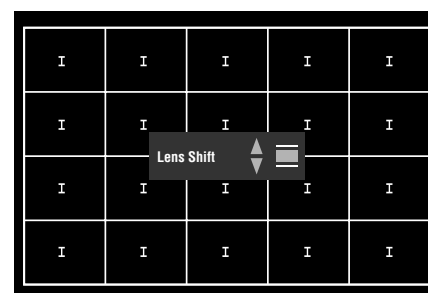

◆ Adjusting the vertical position – V.POS button

If the center of the screen is not in line with the center of the lens of the DPX-1200, use the V.POS button to adjust the position of the image up or down. You can adjust the image to a maximum of half of the height of the projection screen.

1. Press the V.POS button on the remote control, or press the SETTING button on the main unit repeatedly to select [Lens Shift] from the display menu.
2. Press the Δ or ∇ button to move the projected image to a suitable place.
3. To exit from the adjustment mode, press the V.POS or ESCAPE button.

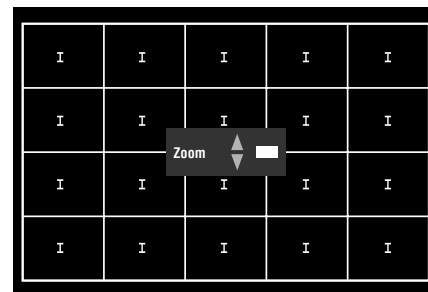

◆ Adjusting the size of an image – ZOOM button

Enlarge or reduce the size of the projection image to match the size of the screen. The zoom ratio is 1:1.6.

1. Press the ZOOM button on the remote control, or press the SETTING button on the main unit repeatedly to select [Zoom] from the display menu.
2. Press the Δ or ∇ button to adjust the image to a suitable size.
3. To exit from the adjustment mode, press the ZOOM or ESCAPE buttons.

◆ Adjusting the image focus – FOCUS button

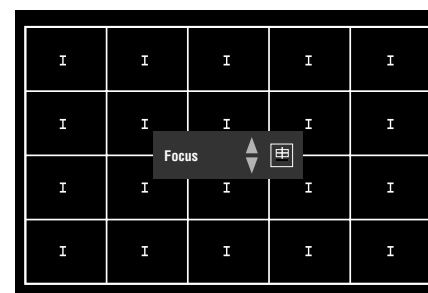

Adjust the focus of the on-screen image.

1. Press the FOCUS button on the remote control, or press the SETTING button on the main unit repeatedly to select [FOCUS] from the display menu.

Memo

- When you want to use the test pattern to adjust image focus press the PATT button on the remote control, or the PATTERN button on the main unit before carrying out step 1.
2. Press the Δ or ∇ button to adjust the focus of the projected image.
 3. To exit from the adjustment mode, press the FOCUS or ESCAPE buttons.

◆ Adjusting the iris setting – IRIS button

Press the ∇ button to reduce the aperture of the iris for increased black levels and contrast, or the Δ button to increase aperture to obtain a brighter image.

1. Press the IRIS button on the remote control, or press the SETTING button on the main unit repeatedly to select [IRIS] from the display menu.
2. Press the Δ or ∇ button to adjust the iris setting for the projected image.
3. To exit from the adjustment mode, press the IRIS or ESCAPE button.

Menu configurations

Configure the DPX-1200 to suit your viewing environment by adjusting image quality, initial settings, defaults, and setup characteristics. These parameters can be accessed through the menu.

Press the MENU button on the remote control or the main unit to display the menu screen. The menu consists of the [Image], [Signal], [Initial], and [Setup] menu groups, each containing numerous items you can use for configuring the unit. Note that some items are only selectable for certain types of input signal (Video, Component, RGB TV, RGB PC).

Menu groups appear in the upper area of the display, as the top level of menu composition. Menu items appear in the left area of the display. You can select settings and make adjustments to suit your preferences. See page 32 - 40 for an explanation of how to use the menu.

◆ Menu screen

<Example: When in advanced mode>

Menu group
[Image] selected.

Menu items
Items displayed here depend on the menu group you select. The picture on the right shows menu items in the [Image] group for example.

Menu operation guide
Displays helpful instructions when special operations are necessary.

[Move Menu Window] area
Use this selection area to move menu screens. See page 37 for more information.

Parameter adjustment area

Input jack display area
Shows the currently selected input jack.

Memory number status
Displays the currently selected memory number and memory status. Change the memory number and lock/unlock memory settings here (see page 41-43).

Some menu items contain an additional level of items called a submenu. Moving the cursor to an item with a submenu attached displays “↗” to the right of the item name. Some submenus contain further levels of submenus containing items for selection.

<Display example: [Color Adjustment] item submenu>

Indicates the existence of a submenu

[Color Adjustment] submenu

[WRGB] submenu

In this example, the menu contains three submenus, and one of the submenus contains a further submenu.

Menu items

◆ Menu item list:

There are two types of menu, [Basic Mode] and [Advanced Mode].

- Basic mode: The menu displays menu items that are frequently used or absolutely necessary to image projection.
- Advanced mode: The menu displays all menu items, allowing you to carry out detailed adjustments.

You can change between the menu modes using the [Menu Mode] setting in the [Setup] menu group.

Memo

- In addition to color temperature adjustment, the color coordinates and gain adjustment for each color may be carried out at the [WRGB] and [WRGBYCM] color selection screen. Refer to page 36 for more information.
- You can select [Subtitle Area] and [V Scroll] from the [Subtitle Zoom] menu item. See page 38 and 39 for more information.

◆ Menu group items and functions

Memo

- You can only select items displayed with a **Advanced** in advanced mode.

<Image>

You can adjust the image when the unit is receiving an input signal.

Black Level (Input signal) Video/S-Video/Component/RGB TV	Adjusts the level of darkness (black level) in an image. Adjusts the level of darkness without altering peak whiteness levels. <ul style="list-style-type: none"> + side (0 to +50): Increases the luminance of dark scenes, increasing the clarity of shading, but reducing contrast. - side (-50 to 0): Weakens dark scenes, increasing image contrast while reducing the clarity of black shading. 
White Level (Input signal) Video/S-Video/Component/RGB TV	Adjusts the bright areas (white level) in the image. Changes the brightness of an image without altering the brightness of the black areas of the image. <ul style="list-style-type: none"> + side (0 to +50): Increases the brightness of white areas in the image, increasing contrast clarity, but rendering white shadings difficult to see. - side (-50 to 0): Reduces the contrast of images. 
Brightness (Input signal) RGB PC	Adjusts the overall brightness of the image. <ul style="list-style-type: none"> Increase luminance (0 to +100): Setting this figure too high results in a white saturated image without any black. Decrease luminance (-100 to 0) Setting this figure too low darkens the entire image. 
Contrast (Input signal) RGB PC	Adjusts the bright areas (white level) in the image. Changes the brightness of an image without altering the brightness of the black areas of the image. <ul style="list-style-type: none"> + side (1.00 to 1.50): Increases the brightness of white areas in the image, increasing contrast clarity, but rendering white shadings difficult to see. - side (0.50 to 1.00): Reduces the contrast of images. 
Gamma (Input signal) Video/S-Video/Component/RGB TV/RGB PC	Changes the way the unit responds to changes in the shadings and color tones of the image. The unit supplies 10 types of patterns for dealing with these changes. (see page39) <ul style="list-style-type: none"> A-E Provides the same sense of contrast as an ordinary TV monitor. Dark sections become more muted in the order A → E. a-e Provides richer expression of gradations in dark sections. Dark sections become more muted in the order a → e.

Hue (Input signal) Video/S-Video/Component/RGB TV	Sets the hue or phase of the image. <ul style="list-style-type: none"> • + side (0 to +50) : Shifts the hue towards blue coloration. • - side (-50 to 0) : Shifts the hue towards red coloration.
Saturation (Input signal) Video/S-Video/Component/RGB TV	Adjusts the degree to which color depth is expressed in the image. <ul style="list-style-type: none"> • + side (+100 to +200) : The unit projects colors with greater depth. • - side (0 to +100) : The unit projects colors with less depth.
Color Temp. (Input signal) Video/S-Video/Component/RGB TV/RGB PC Adjust in the [Color Adjustment] menu in advanced mode.	Adjusts color temperature. Adjusts the level of white in colors between red and blue, and between green and magenta. Increase the color temperature to increase the amount of blue in an image, giving bright color tones. Reduce the color temperature to increase the amount of red, giving a darker, more relaxed atmosphere to the image. Choices: 5,000 to 10,000 
White Correction (Input signal) Video/S-Video/Component/RGB TV/RGB PC Adjust in the [Color Adjustment] menu in advanced mode.	Adjusts ΔUV. Increasing the ΔUV setting increases the amount of green in the image. Decreasing this setting increases the amount of magenta. Choices: -0.02 to +0.02 
Sharpness Type (Input signal) Video/S-Video/Component/RGB TV	Changes the characteristics of the filter used for “Sharpness Gain” (described below). Choices: Off / L / ML / MH / H
Sharpness Gain Advanced (Input signal) Video/S-Video/Component/RGB TV	Adjusts the clearness of the image edges. Increase this figure to render a sharper image, or reduce it to give a softer image with less image noise. You cannot adjust this parameter if [Sharpness Type] is set to [Off]. Choices: 0 to 10

Color Adjustment Advanced

(Input signal)
Video/S-Video/Component/
RGB TV/RGB PC/D4 VIDEO

Adjusts color balance.

There are three menus, [Standard], [WRGB], and [WRGBYCM], separated in order of complexity from simple to detailed. By the default setting, the DPX-1200 automatically selects BT709 (RGB color coordinate for High-Definition Television) for HDTV (High-Definition Television) or PC video input and BT601 (RGB color coordinate for Standard Television) for SDTV (Standard Television) input. Refer to page 36 for parameter operation methods.

The present color temperature setting is displayed to the right of the menu items.

Color Adjustment Standard 6700K ±0.000uv ← The current color temperature is displayed.

- Standard

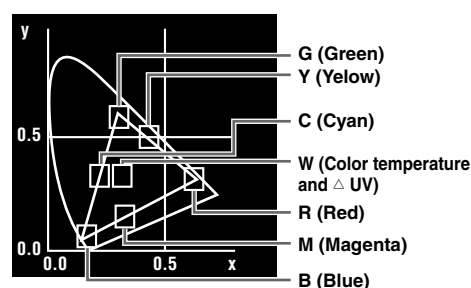

Adjusts color temperature and ΔUV only. ΔUV adjusts values within the maximum color temperature limits of the projector.

**- WRGB**

Adjusts the color coordinates and gain for the three primary colors, R(Red), G(Green), and B(Blue). The unit sets the complementary colors Y(Yellow), C(Cyan), and M(Magenta) automatically. Adjusting [Color Temp.] resets the RGB gain based on color coordinate settings. Adjusting [Gain] resets [Color temp.] based on color coordinate settings.

**- WRGBYCM**

Adjusts the color coordinates and gain for each component color individually. Press the RESET button on the remote control when the WRGBYCM menu is open to automatically adjust the RGB gain and YCM color coordinates and gain based on the color temperature and RGB color settings. When you have selected WRGBYCM in the color adjustment submenu, press RESET to automatically adjust the RGB gain and YCM color balance to the most appropriate setting, based on color temp and RGB color balance settings.

Choices: White correction : -0.02 to +0.02
Color temperature : 5,000 to 10,000
Gain : 0.00 to 1.99

White Peaking

Enhances the brilliance of the white portions of the projected image.

Choices: 0 to 5

Iris Advanced

(Input signal)
Video/S-Video/Component/RGB TV/RGB PC

Adjusts the iris (Optical).

You can select 3 levels.

Close ← → Open

**Level Adjustment** Advanced

(Input signal)
Component/RGB TV/RGB PC

Adjusts the analog input signal gain and offset settings.

Adjust the gain and offset for component and RGB (Y, C_B, C_R/R, G, B) input signals.

Choices: -50 to 0 to +50 (except for HDMI signals)

◆ Signal

You can adjust the image when the unit is receiving an input signal.

Display Aspect Ratio (Input signal) Video/S-Video/Component/RGB TV/RGB PC	Sets the aspect ratio for projecting an image from an input signal. See “Selecting a display aspect for projecting images”, page 17.
Overscan Advanced (Input signal) Video/S-Video/Component/RGB TV	Overscans video input sources for display. Selects from [Standard] and [Full]. This parameter is not available when you select [Smart Zoom] in [Display Aspect]. In some cases, noise may appear at the edges of the image when you select [Full]. <ul style="list-style-type: none"> • [Standard] : approximately 94% video output ratio • [Full] : approximately 100% video output ratio
3D Y/C Separation Advanced (Input signal) Video(NTSC)	Adjusts the quality of images input from VIDEO jack. Suppresses the rainbow-like color and annoying dots in images. This function is only available for NTSC format signals the unit receives at its composite input jacks. Choices: On/Off
Noise Reduction Advanced (Input signal) Video/S-Video/Component/RGB TV	Reduces noise in analog images. Digital processing eliminates noise in the luminance and color signals from sources with a comparatively large amount of noise, producing a more vivid image. Use when the quality of the source you are viewing requires it. Choices: Off/1/2/3
Video Type Advanced (Input signal) Video/S-Video	Selects the correct type of device to ensure image synchronization. Select [VCR] when using an analog video tape as a video source. Select [DVD] for other sources.
Progressive Mode Advanced (Input signal) Video/S-Video/Component/RGB TV	Switches the interlace/progressive (I/P) conversion mode. Changes from Interlace/Progressive (I/P) conversion mode to [Auto] or [Video] mode. (Only for SDTV interlaced signal). <ul style="list-style-type: none"> • [Auto] : Detects the film source automatically and projects it progressively. • [Video] : Turns the detection function off.
Color Space Conversion Advanced (Input signal) Video/S-Video/Component	Selects color space coefficients. <ul style="list-style-type: none"> • [Auto] : Selects the best color space coefficient for the image resolution. • [SDTV] : Color space coefficient for BT.601 type signal. • [HDTV] : Color space coefficient for BT.709 type signal.
Setup Level (SDTV) (Input signal) Video/S-Video/Component/RGB TV	Compensates for differences in the black levels of SDTV images. <ul style="list-style-type: none"> • For signals equal to the pedestal level : Set to [0%]. • For signals with high levels of blackness : Set to [7.5%].

Setup Level (HDTV) (Input signal) Component/RGB TV	Compensates for differences in the black levels of HDTV images. Usually, choose [0%]. <ul style="list-style-type: none"> For signals equal to the pedestal level : Set to [0%]. For signals with high levels of blackness : Set to [7.5%]. 
Sync Adjustment Advanced (Input signal) RGB PC (except for HDMI signals)	Regulates flickering, noise, and disorder in the image. Choices: -128 to +127
Tracking Advanced (Input signal) RGB PC (except for HDMI signals)	Regulates vertical striping in the image. Choices: 0 to 31
Clamp Position Advanced (Input signal) Component/RGB TV	Adjusts the clamp position for analog video sources. Choices: -30 to +30
Horiz. Display Position Advanced (Input signal) RGB PC (except for HDMI signals)/ Component/RGB TV	Adjusts the horizontal display position of the image. Choices: PC type : -50 to 0 to +50 Video type : -10 to 0 to +10
Vert. Display Position Advanced (Input signal) RGB PC (except for HDMI signals)/ Component/RGB TV	Adjusts the vertical display position of the image. Choices: PC type : -50 to 0 to +50 Video type : -5 to 0 to +5
Signal Status	Displays the resolution of the image signal the unit is receiving. Sync signal information for RGB type inputs is also displayed.

◆ Initial

Color System	<p>Selects the color system to use for video input signals.</p> <p>Usually, set this parameter to Auto to have the unit automatically detect the signal and select an appropriate color system. Set the unit manually to view NTSC4.43 images as it cannot detect NTSC4.43 automatically.</p> <p>Choices: Auto/NTSC/NTSC4.43/PAL/PAL-M/PAL-N/PAL60/SECAM</p>
INPUT A Signal	<p>Selects the type of input signal received at INPUT A.</p> <p>Choices: Component/RGB PC/RGB TV</p>
INPUT A Sync Type <small>Advanced</small>	<p>Selects the sync type for signals received at INPUT A.</p> <p>This function is only available for RGB TV.</p> <p>Choices: Auto/Separate Sync/Composite Sync/Sync on Green</p>
INPUT B Signal	<p>Selects the signal type received at INPUT B.</p> <p>Choices: Component/RGB PC/RGB TV</p>
INPUT B Sync Type <small>Advanced</small>	<p>Selects the sync type for signals received at INPUT B.</p> <p>This function is only available for RGB TV.</p> <p>Choices: Auto/Separate Sync/Composite Sync/Sync on Green</p>
HDMI Signal	<p>Selects the signal type received at the HDMI jack.</p> <p>Choices: Auto/Component/RGB TV</p>
Auto Power Off <small>Advanced</small>	<p>If the signal the unit is currently receiving stops and you do not perform any operations for 30 minutes or more, the unit automatically places itself in standby mode.</p> <p>Choices: On/Off</p>
Auto Input Search <small>Advanced</small>	<p>Automatically changes inputs when the unit does not receive a signal.</p> <p>If the signal the unit is currently receiving stops, or the input signal you selected the last time you used the unit does is not available when you turn the unit power on, it automatically searches through inputs for a signal in the following order.</p> <p>INPUT A → INPUT B → D4 VIDEO → S VIDEO → VIDEO → HDMI → INPUT A</p> <p>Choices: On/Off</p>
Display Language	<p>Selects the language used in the menu display.</p> <p>Choices: 日本語/English/Deutsch/Español/Français/Italiano/Portuguêsa/한국어/中文</p>
Lamp Running Time	<p>Displays the total lamp running time.</p> <p>Opens the submenu to reset the running time. See page 38 for the operational procedure.</p>
Reset	<p>Resets menu parameters to their default setting.</p> <p>Resets all menu parameters to their default setting, and return the configurations stored in the memory to their defaults. See page 37, 46 and 47 for the operational procedure.</p> <ul style="list-style-type: none"> • [All Settings] : Return all settings in the [Initial] and [Setup] menu groups in the main menu, and all configurations stored by the memory function, to their default settings. • [All Memory] : Return all configurations stored by the memory function to their default settings. • [Current Memory] : Return the currently selected memory configuration (corresponding to the signal input from the currently selected input jack) to its default setting.

◆ Setup

Location	Designate the location of the main unit. Choices: [Front/Table] [Front/Ceiling] [Rear/Table] [Rear/Ceiling] (☞ page 50)
Keystone Correction	Adjusts the projection angle of the image. If you do not install the projector at right angles to the screen, the image will be trapezoidally distorted. You can electronically correct this distortion using the keystone function to adjust the width without changing the height of the image. Increase the keystone value (0 to 100) when the top of the image is overly wide, and reduce it (-100 to 0) when the lower part is overly wide. <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> <p>When the upper part of the image is wider than the lower</p>  <p>Increase the value in the positive (+) direction</p> </div> <div style="text-align: center;"> <p>When the lower part of the image is wider than the top</p>  <p>Decrease the value in the negative (-) direction</p> </div> </div>
Remote Control Sensor Advanced	Sets the remote control sensor. The main unit has two remote control sensors, one on the front panel and one on the rear, which this setting allows you to switch between. The remote control functions regardless of the setting of this parameter if you use a wired connection to connect it to the main unit. Choices: Front & Rear/Front/Rear/Off
Remote Control ID Advanced	Sets the remote control ID. Selects ID1 or ID2 for each main unit when operating two main units with one remote control. You can select the controllable main unit with the remote control code switch on the remote control. Choices: ID1/ID2
Lens Adjustment Lock	Locks the lens adjustment function. Locks the lens so that you cannot change the V.POS, ZOOM, and FOCUS settings accidentally when set to [ON]. Set to [OFF] to cancel this function.
Lamp Power Advanced	Lowens the power supply to the lamp. You can adjust the power supplied to the lamp within the range of 80 to 100%.
Menu Color	Selects the color of the letters and background the main unit uses to display the menu on screen. You can choose to display the menu screen in [Monotone] or [Color]. Also, you can adjust the contrast and brightness of the menu from the [Menu Brightness] and [Menu Contrast] menus. You can select from 3 color types. <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;"> <p>Monotone</p> <ul style="list-style-type: none"> └ Menu Brightness └ Menu Contrast </div> <div style="text-align: center;"> <p>Color</p> <ul style="list-style-type: none"> └ Menu Brightness └ Menu Contrast └ Color Style </div> </div>
Menu Mode	Switches menu modes between an easy-to-use basic mode and a detailed advanced mode. Choices: Basic/Advanced
Message Advanced	Selects whether to display memory number, input signal and other information on the projection screen. (☞ page 60) Choices: On/Off
Trigger Out Advanced	Sets the TRIGGER OUT terminal. Set the external control TRIGGER OUT jack 12 V signal emission to [Lamp] to synchronize it to the ON/OFF state of the lamp, to [Fan] to synchronize it to the fan, and to [RS-232C] to receive ON/OFF signals through the RS-232C terminal. Choices: Lamp/Fan/RS-232C
Baud Rate Advanced	Sets the transmission speed of the RS-232C terminal. This setting becomes valid from the next time you switch the unit on. Choices: 9600bps/19200bps/38400bps/57600bps/115200bps

Menu operations

◆ Operation button functions

Use the buttons on the remote control or the main unit to operate the menus. The button functions are listed below.

Remote Control

❶ Menu Button

Opens/Closes the menu.

❷ Cursor button

+ / - (Move the cursor right/left)

- Selects menu groups.
- Opens/Closes submenus.
- Selects/Changes settings.

△ / ▽ (Moves the cursor up/down)

- Selects menu items.
- Selects/Changes settings.

❸ button

- Confirms setting changes.
- Opens the in-line menu when the menu is not open.
- Selects special menu items ( page 36) and memory operation. ( page 41)

❹ ESCAPE button

- Returns the cursor one level up the menu (e.g. From the menu item level to the menu group level).
- Closes submenus.
- Closes the menu screen when the cursor is in a menu group.
- Returns from the menu movement bar to the menu entry screen, after moving a menu.

❺ RESET button (Remote control only)

Returns parameters back to their default settings (Does not affect items with no default setting).

Main Unit

◆ Menu operations 1 (with no submenu)

Menu operations use the procedure below to adjust menu item without submenus.

Select a menu group (Image / Signal / Initial / Setup)
(Select with the +/- buttons)

↓ Menu items related to the selected menu group are displayed.

Select an item to adjust or a setting
(Select with the △ / ▽ buttons)

↓ You can now adjust the selected item.

Choose a setting for the selected item
(Usually, use the +/- buttons)

1. Press the MENU button to open the menu screen.

- Memo
- If you have opened the menu screen previously, the menu displays the settings from the last time you used it.

Move Menu Window			
Image	Signal	Initial	Setup

5. Move to another item or group as necessary.

Memo

- Press the Δ or ∇ button to move the cursor to another item in the same group.
To move to an item in another menu group, press the ESCAPE or Δ button to return to the top of the menu group, and repeat steps 2,3 and 4.

Remote Control Main Unit

Remote Control Main Unit

6. To close the menu screen when you have finished making adjustments, press the MENU button.

◆ Menu operations 2 (with submenus)

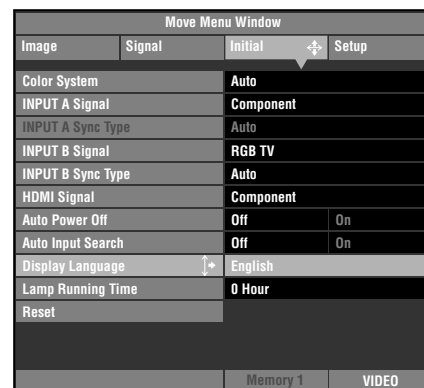

Use the procedure below to adjust menu items that contain submenus.

1. Carry out steps 1 to 3 from “Menu Operations 1” to select the menu item you want to set.

The illustration at right depicts [Display Language] in the [Initial] group selected.

Memo

- “↔” appears to the right of items that contain a submenu.

Remote Control

or

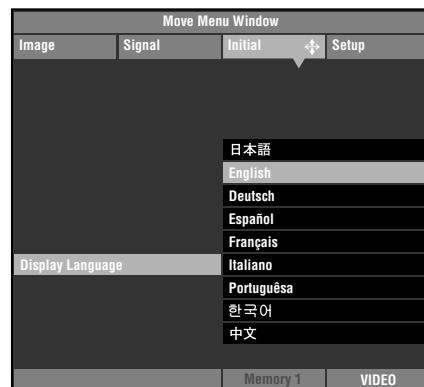

Main Unit

2. Press the + button to move to the submenu.

Memo

- Some menu items contain other items that you can select. In such cases, move to the lower level submenu using the + button.

Items using the ↵ button for setting.

Display Aspect Ratio
Color System
Input A Signal
Input A Sync Type
Input B Signal
Input B Sync Type
HDMI Signal

Remote Control ID

3. Press the △ or ▽ button to adjust item settings.

Memo

- Press the ↵ button to confirm some settings.
↵ : Fix appears in the operations guide at the bottom left of the menu screen if this is necessary.

4. Press the – or ESCAPE button to return to higher level menu items.
5. To close the menu screen when you have finished making adjustments, press the MENU button.

◆ Special menu operations

Some items in the menu require special methods to configure.

<Color Adjustment>

1. Select [Color Adjustment] in the [Image] group from the main menu.
2. Press the + button to enter submenu.
3. Select a suitable item from [Standard] • [WRGB] • [WRGBYCM] using the \triangle or ∇ button, and press the + button.

This explanation uses the [WRGBYCM] menu as an example.

4. Press the \triangle , ∇ , +, or - button to select the item you wish to configure from the color scale, and press the \hookrightarrow button.

Color coordinate adjustment area on the right side of the menu screen will be highlighted.

5. Press the \triangle , ∇ , +, or - button to adjust the setting for the item.
6. If you select R (red), G (green), B (blue), Y (yellow), C (cyan), or M (magenta) in step 4, press the \hookrightarrow button to move to the gain adjustment area, and press the + or - button to adjust the gain.
7. Press the ESCAPE button to return to the color scale.

Example: Adjusting R (Red)

Memo

- See page 27 for details about each color item.

<Resetting the selected parameter>

Reset the selected parameter to the default setting.

1. Select the item you wish to reset to the default setting from the main menu.
2. Press the RESET button on the remote control to reset to the default settings (resetting does not affect items with no default setting).

Memo

- The RESET button has a special function when selecting [WRGBYCM] in [Color Adjustment]. (page 27)
- The RESET button resets the parameters to their default settings (corresponding to the signal input: HDTV or SDTV) when the Color coordinate adjustment area is selected after selecting [WRGB] or [WRGBYCM] in [Color Adjustment]. (page 27)

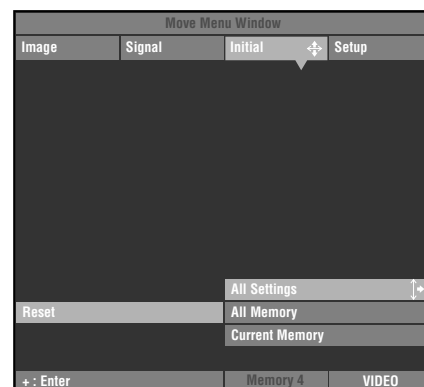

<Resetting all parameters>

Reset all parameters to their default settings.

1. From the menu screen, select [Initial] → [Reset] → [All Settings].
2. Press the + button to display a confirmation message.
3. Press the  button to reset to the default settings.

Memo

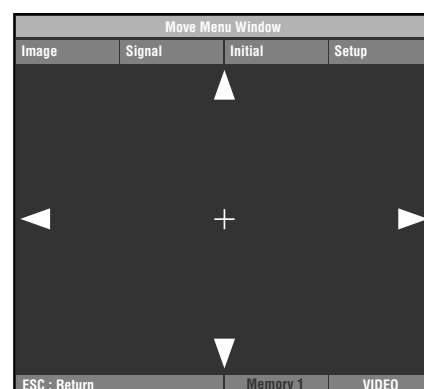

- To cancel this operation and return to the previous screen, press the ESCAPE button.

<Changing the position of the menu screen.>

Change the position of the menu on the screen.

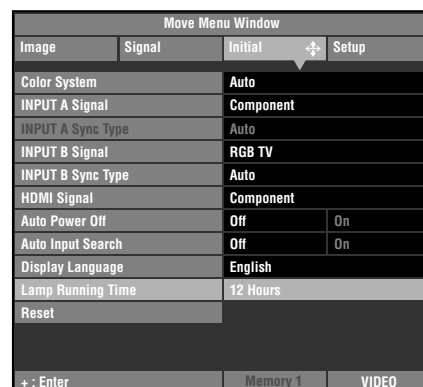

1. In the menu screen, press the ESCAPE or  button and move the cursor to one of the menu groups.
2. Press the  button to enter [Move Menu Window].
3. Use the , , , or  button to move the menu screen to a location of your choice.
4. Press the ESCAPE button to return to the previous menu screen.

<Resetting the lamp running time.>

Reset the [Lamp Running Time] displayed on screen to “0”.

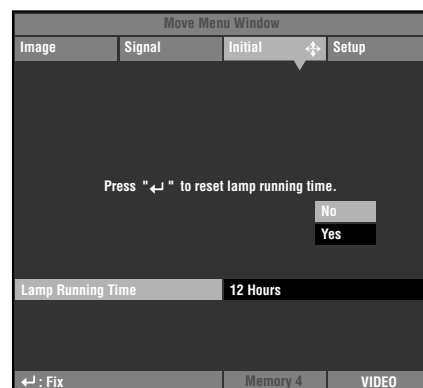

1. From the menu screen, select [Initial] → [Lamp Running Time].

2. Press the + button to open the confirmation screen.
3. Press the △ or ▽ button to select [Yes].
4. Press the ↵ button to confirm.

Memo

- To cancel the operation and return to the menu screen, select [No].

<Subtitle Zoom>

Use the [Subtitle Area] menu to adjust the size of the subtitle display area. Use [V Scroll] to adjust the vertical position of the subtitle display.

1. From the menu screen, select [Signal] → [Display Aspect Ratio] → [Special].
2. Press the + button to enter the lower level selection menu.
3. Select [Subtitle Zoom] with △ or ▽ buttons.
4. Press the ↵ button.

“↕” appears to the right of [Subtitle zoom].

Memo

- After the first time you carry out this procedure, “↕” appears beside [Subtitle Zoom] automatically.

5. Press the + button to enter the lower level selection menu.
6. Press Δ or ∇ button to select [Subtitle Area] or [V Scroll].
7. Press the + or – button to select a suitable setting.

Memo

- Press the Δ or ∇ button to move to a different menu item in the [Subtitle Zoom] menu.
8. Press the ESCAPE button to return to the higher level selection menu.

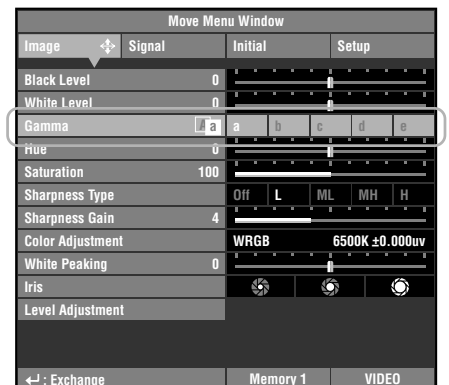

<Changing the [Gamma] page>

Select a gamma control pattern (color tone characteristics) from the 10 preset patterns. (page 25)

1. From the menu screen, select [Image] \rightarrow [Gamma].
2. Press the \leftarrow button to switch between capital (A to E) and non capital (a to e) letters.
3. Use the + or – button to select an appropriate setting.

Press the \leftarrow button

◆ Adjusting image quality using the inline menu

Use the inline menu to adjust image quality without obstructing the image during projection. See “Menu group items and functions” (page 25 to 31) for information on each setting.

<Inline menu composition>

<Inline menu item list>

The menu items available may differ depending on the input signal type.

For video type sources		For PC type sources
Black Level	Sharpness Type	Brightness
White Level	Sharpness Gain	Contrast
Gamma	White Peaking	Gamma
Hue	Iris	Color Temp.
Saturation		White Correction
Color Temp.		White Peaking
White Correction		Iris

Memo

- When [Sharpness Type] is set to [Off], the [Sharpness Gain] adjustment cannot be performed.

<Example: Using the inline menu>

1. Press the \leftarrow button when the menu is not open.

Image menu items appear one at a time in the lower area of the screen. If you do not carry out any operations within 5 seconds, the menu disappears.

2. To close the menu when you have finished making adjustments, press the ESCAPE button.

Memo

- Press the \leftarrow button to change between the pages of the [Gamma] menu.

8 Memory function (Save, Recall, Lock, Copy, Reset)

The memory function automatically saves the settings of menu items listed in the “Items to be saved” table below.

◆ Memory configurations

The DPX-1200 stores up to six sets of configurations, called memory numbers, for each input jack. For each memory number, the DPX-1200 stores specific configurations for each signal type, giving a total of 72 configurations.

Memory configurations for each input jack			Items to be saved	
Input	Input Signal Type	The Number of Memories	Image	Signal
VIDEO	—	6	Black Level (Brightness)	3D Y/C Separation
S VIDEO	—	6	White Level (Contrast)	Noise Reduction
INPUT A	SDTV	6	Gamma	Video Type
	HDTV	6	Hue	Progressive Mode
	RGB-PC	6	Saturation	Color Space Conversion
INPUT B	SDTV	6	Color Temp.	Setup Level
	HDTV	6	White Correction	Signal Level
	RGB-PC	6	Sharpness Type	
HDMI	SDTV	6	Sharpness Gain	
	HDTV	6	Color Adjustment	
D4	SDTV	6	White Peaking	
	HDTV	6	Iris	
Total		72	Level Adjustment	

◆ Saving memory settings

All memory numbers have default settings. Since the DPX-1200 saves any changes in the menu item to the current memory number, you do not need to save the settings each time. To preserve the specific settings, use the “Memory lock” function (See page 43).

◆ Recalling a memory number

<Using the remote control>

1. Press the MEMORY button (in the MEMORY area) of which you want to recall the settings.

<Using the menu>

1. Select the [Image] or [Signal] group from the menu screen.

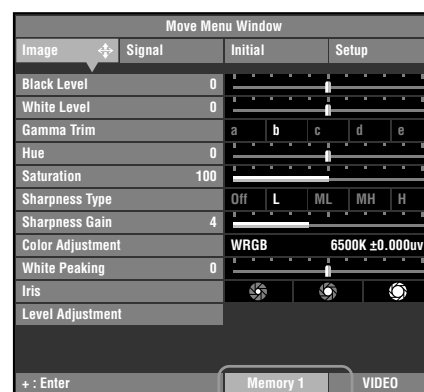

Remote Control

or

Main Unit

2. Press the ▽ button to select “Memory number status” from the bottom of the screen.

Memory number status

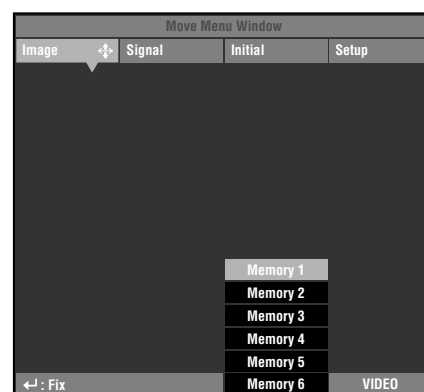

Remote Control

or

Main Unit

3. Press the + button to open the submenu.

Remote Control

or

Main Unit

4. Press the △ or ▽ button to select a memory number.

Remote Control

or

Main Unit

5. Press the ← button to recall the settings in the selected memory.

Memo

- When the unit receives a signal with a different resolution from the same input jack, it detects the new resolution and recalls an appropriate memory settings.

◆ Memory lock

The lock function protects information in a memory not to be overwritten. You can set the lock function for each memory number, and additionally for each SDTV/HDTV/RGB-PC input.

<Setting Memory Lock>

1. Recall the memory number you wish to lock.
2. Select a memory number status.
3. Press the  button.

“” appears beside locked memory numbers.

Remote Control

or

Main Unit

 appears

<Deactivating Memory Lock>

1. Select the memory number you wish to unlock.
2. Select a memory number status.
3. Press the  button.

“” disappears from the memory status screen and the memory lock is removed from the memory number you selected.

Remote Control

or

Main Unit

 disappears

Memo

- You can change settings when the memory is locked, but the unit does not save the changes to a memory. Any changes you make are erased when you place this unit to standby mode. (The memory number status color changes from white to gray if you change any menu items while the memory is locked.)

◆ Memory copy

Copy the settings stored in a memory number to another memory number.

1. Recall the memory number to be the copy source.
2. Press the ∇ button to select “Memory number status” from the bottom of the screen.

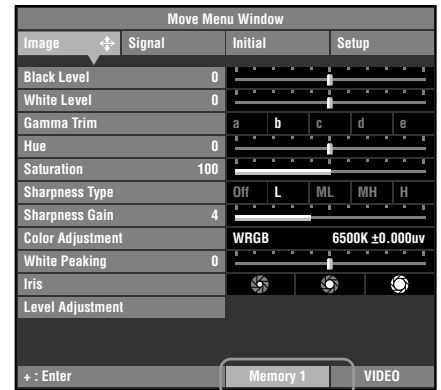

Remote Control

or

Main Unit

Memory number status

3. Press the + button to open the submenu.

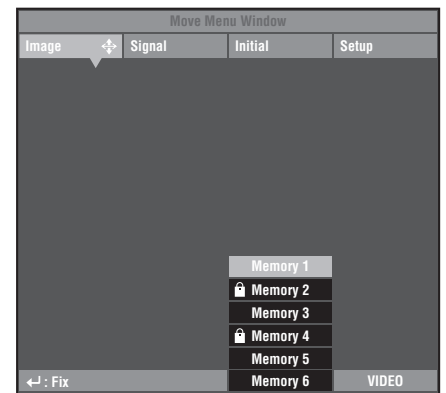

Remote Control

or

Main Unit

4. Press the \triangle or ∇ button to select a memory number to be the copy destination.

Remote Control

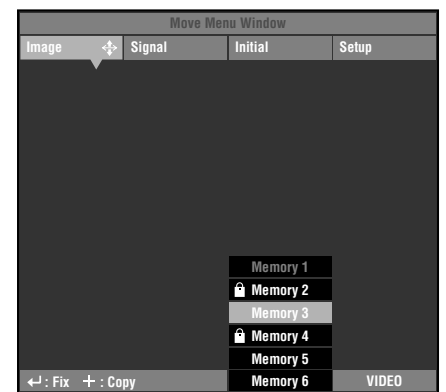

or

Main Unit

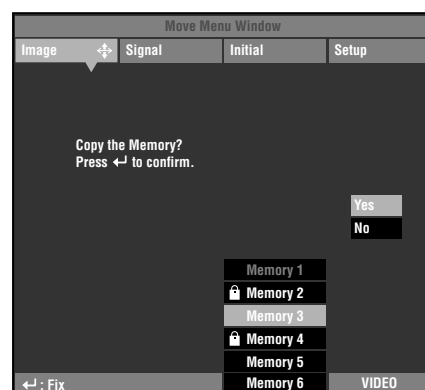

Memo

- You cannot select a source memory number (gray colored) as a copy destination.
- You cannot select a locked memory number (marked “ $\mathbf{\text{lock}}$ ”) as a copy destination.

5. Press the + button to display the confirmation screen.

6. Press the Δ or ∇ button to select [Yes] .

7. Press the \leftarrow button.

The settings stored in the source memory number are copied to the destination memory number.
If the copy is complete, the memory status screen displays the memory number selected in step 1.

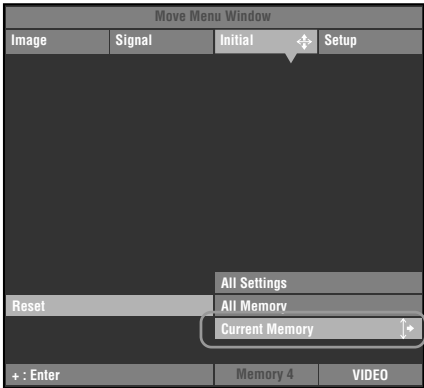

◆ Resetting to the default settings

Reset parameters stored in memories to default settings.

<Initialization of currently selected memory>

Follow the procedure below to return parameters stored in the selected memory (corresponding to the signal input from the currently selected input jack) to their default settings.

- 1. From the main menu, select [Initial] → [Reset] → [Current Memory].

- 2. Press the + button to display the confirmation screen.

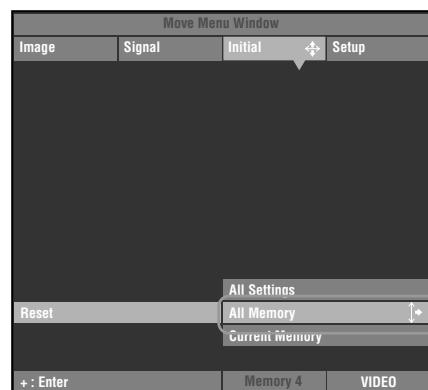

- 3. Press the ↵ button to reset the parameters to their default settings.

<To reset all parameters for all memory numbers>

Reset all parameters in memories to default settings regardless of the input jack or input signal.

1. From the main menu, select [Initial] → [Reset] → [All memory].

2. Press the + button to display the confirmation screen.

Remote Control

or

Main Unit

3. Press the ← button to reset the parameters to their default settings.

Remote Control

or

Main Unit

9 Connection

Connecting to AV components

This unit is equipped with 6 types of video input jacks for AV components. Follow the diagram to connect AV components to this unit, taking care to use cables and adapters that match the input jacks.

Input	Signal type	Connector type
VIDEO	Composite video	Pin jack
S VIDEO	S-Video	Mini DIN connector
INPUT A	Component video/RGB video	BNC connector x 3-5
INPUT B	Component video/RGB video	D-sub 15 pin
D4 VIDEO	Component video	D connector
HDMI	Component video/RGB video (digital)	HDMI connector

Warning

- Be sure to turn off the power of this unit and the source component before attempting connection.
- Connection methods and jack names may differ depending on the component you are attempting to connect. Refer to the owner's manual for the component.
- Insert all plugs firmly to avoid noise or other problems.

Memo

- Be sure to connect Y/Pb/Pr and Y/Cb/Cr to the jacks with the correct signals when connecting AV components to INPUT A. Refer to the owner's manual of the source component for more information. You may need to make connections to HD/SYNC and VD for RGB video signals.

Connecting to computer devices

You can use the following two methods to connect to computer devices. Be sure to use cables with jacks that match the connectors and jacks you wish to use. You cannot use a HDMI-DVI conversion cable to connect this unit and a computer device.

Input	Signal type	Connector type
INPUT A	RGB (Analog)	BNC jack x 5
INPUT B	RGB (Analog)	D-sub 15 pin

Information for installers (for US model only)

Use the supplied trigger-out DC plug to control external components.
Be sure to solder the wires from an external component to the plug terminals with the correct polarities, as illustrated at left.

Warning

- Soldering the wires to terminals with incorrect polarity may cause bodily injury or may damage this unit and the external component connected to this unit with this cable.

Setting up the DPX-1200

There are four ways of mounting the projector.

Mounting method	Projection method
Placed on a table	A: From in front of a screen
	B: From behind a semi-translucent screen
Mounted on the ceiling	C: From in front of a screen
	D: From behind a semi-translucent screen

◆ Mounting the projector on a table

A: From in front of a screen

Place the unit on a table to project and view the image from in front of the screen. Usually, place the unit on a reasonably high table. The height from the bottom of the unit to the center of the lens is 12.4 cm (4"-7/8).

B: From behind a screen (using a semi-translucent screen)

Place the unit on a table to project and view the image from behind a semi-translucent screen. The distance between the projector and the screen should be the same as "A: From in front of the screen".

- Set the [Location] menu item in the [Setup] menu group to [Rear/Table]. (☞ page 22 - 40)

◆ Mounting the projector on the ceiling

There are two kinds of brackets (sold separately: PMT-L31 and PMT-H35), which you can use to mount the projector on the ceiling. Please consult your dealer for details on their use, and have installation done by either your dealer or a reputable contractor.

C: From in front of a screen

Mount the unit on the ceiling to project and view the image from in front of the screen. The distance between the projector and the screen should be the same as "A: From in front of the screen".

- Set the [Location] menu item in the [Setup] menu group to [Front/Ceiling]. (☞ page 22 - 40)

D: From behind a semi-translucent screen

Mount the unit on the ceiling to project and view the image from behind a semi-translucent screen. The distance between the projector and the screen should be the same as "B: From behind a screen".

- Set the [Location] menu item in the [Setup] menu group to [Rear/Ceiling]. (☞ page 22 - 40)

Projection distance

The most suitable distance between the screen and the projector (see Projection distance [a]) depends on the size of the screen (diagonal length) you use. You can use the zoom function to adjust the projection distance within a preset range from Wide to Tele. You can also alter the V.POS parameter to adjust the vertical position of the image to better suit the screen. Use the information in the table below to determine the best location to place the projector in to suit your screen size.

<When using a 16:9 screen>

Screen size (inch)	Projection distance [a] Wide (m) – Tele (m)
60	1.78 – 2.88
70	2.08 – 3.37
80	2.39 – 3.86
90	2.70 – 4.35
100	3.00 – 4.84
110	3.31 – 5.33
120	3.62 – 5.82
150	4.54 – 7.29
200	6.07 – 9.74

* These are theoretical values.
During actual use there may be a deviance of a few percent.

<When using a 4:3 screen>

Since the DPX-1200 has a 16:9 panel, the ideal installation location for use with a 4:3 screen depends on the size of the image you wish to view.

Screen size (inch)	Projection distance[a]	
	16:9 image (*1) Wide (m) – Tele (m)	4:3 image (*2) Wide (m) – Tele (m)
60	1.63 – 2.64	2.17 – 3.52
80	2.19 – 3.54	2.93 – 4.72
100	2.76 – 4.44	3.68 – 5.92
120	3.32 – 5.34	4.43 – 7.12
200	5.58 – 8.94	7.43 – 11.92
	(*)	

(*1) Projects a 16:9 image that completely fills the screen (leaves a black line at the top and bottom of the screen).

(*2) Projects a 4:3 image that completely fills the screen.

(*3) When projecting both 16:9 and 4:3 images.

You can use the zoom function to make efficient use of the screen for both *1 and *2 above. The projection distance in this case is between Wide in *2 and Tele in *1. Use the zoom to adjust the size of the projection images so that they fill the screen completely. Note that adjustments to V.POS may cause the position of the image to change.

Projection image position

Follow the instructions to adjust the position of the projected image on screen.

<Using ZOOM to adjust image position>

This illustration shows the limits within which the zoom function can alter projection distance [a] in relation to screen size. You can adjust the image within these limits so that it fills the screen completely. (☞ page 21)

<Using V.POS (vertical position) to adjust image position>

You can adjust the vertical position of the projection image up or down by half of the height of the screen. For example, shifting V.POS fully up brings the lower limit of the image above the centerline of the lens. (☞ page 20)

<Using the adjusters to adjust image position>

If you mount this unit on a tabletop, you can use the adjusters on its underside to change the position of the projection image. Rotate the movable part of the two screw-type adjusters at the front bottom of the case to adjust the height. The movement range of the adjusters is 3 cm (1-1/4 inch). Adjust with care as loosening them further than 3 cm may cause them to separate from the unit.

◆ Keystone adjustment

If you mount the unit at an angle to the screen, it projects trapezoidally distorted images. You can use the [keystone Correction] item in the [Setup] menu group to rectify this. (☞ page 22-34)

Memo

- If the keystone is adjusted aspect ratio may not be correctly maintained. To correctly maintain the aspect ratio, try to use the DPX-1200 with the lens shift in the center position.
- The video may be disturbed by keystone correction. Wherever possible, we recommend setting up so the screen and projector form a right angle.

Glossary

The following is a list of key words used in the use of projectors and image signals and their explanations. Please refer to it when using this manual.

For an explanation of vocabulary used in the menu, refer to "Menu group items and functions" (☞ page 25).

Ceiling mount bracket

The mounting hardware used to hang this unit from the ceiling.

Two types of bracket are available, for high and low ceilings.

Ceiling mount brackets are sold separately.

Cinemascope size

The widest film format in 70 mm film, with an aspect of 2.35:1.

Color spacing

The conversion of YUV color separated signal to RGB signal.

There are two formats for this, BT.601 for SDTV, and BT.709 for HDTV. This unit switches between them as required.

Component video signal

A method of sending video signals with independent luminance and color signals. Component video gives a higher image quality than ordinary composite video because it bypasses mixing and separating circuits. Component video signal consists of three lines, the luminance signal (Y), and two color difference signals (P_B/C_B, P_R/C_R).

Composite video signal

The most common type of video signal, combining luminance and color signals in one line. This method requires mixing and separating processes on both the send and receive sides. Use a pin cable for connection.

DCDi™ function

Directional Correlational Deinterlacing, a high quality image circuitry developed by the Faroudja company. DCDi™ uses edge cutting techniques to remove jagged edges from images during Interlace to Progressive conversion, allowing smooth, natural reproduction of images.

DLP™ technology

Digital Light Processing, an image display engine used in projectors that use the DMD™ chip developed by Texas Instruments.

D terminal

A cable that allows transmission of all of the signals in composite video in one cable. This method is used for transmitting image signals between the latest AV components. There are 5 methods of transmission, D1-D5. This unit is compatible with D4.

HDCP

A technique designed to protect the video transmission between a DVI or HDMI transmitter and a display device.

HDMI™

High-Definition Multimedia Interface, a method of differentially transmitting digital RGB/component video signal from computers and home digital equipment.

HDTV

High-Definition Television, a term used to define systems that satisfy the following conditions:

- A vertical resolution of 720p or 1080i (p stands for progressive scans, ; stands for interlace scans)
- A 16:9 aspect ratio

Interlace

The most common type of scanning used in televisions. It divides a screen into even and odd numbered fields for scanning, and then builds an image by combining them into one image (frame).

Keystone Correction

Using the unit at an angle to the screen distorts the projected image trapezoidally. You can use Keystone Correction to electronically correct this distortion.

Letterbox

A method of converting the content of landscape oriented film to a 4:3 signal. You can watch landscape images without trimming them by adding a black bar to the top and bottom of the screen, however this sacrifices vertical resolution to some extent.

Progressive

A method of displaying all scanning lines in a frame at once, reducing flicker noticeable on a larger screen and creating a sharp, smooth image. This unit uses progressive scanning for progression.

RGB Signal

A method of transmitting color information using a numeric representation of the primary colors red, green, and blue separately. When received, it is expressed in various colors by adding a mixing colors. RGB is widely used for sending and receiving color images between computers, and requires horizontal and vertical sync signals.

SDTV

Standard Definition Television, a term used to define normal television broadcasts which do not meet HDTV standards.

Smart zoom

Expands the left and right sides of a 4:3 image without altering the center, when you are attempting to project a 4:3 image on a wide screen format. This creates some distortion at both edges.

Squeeze

A method of compressing film images horizontally to an aspect of ratio of 4:3 when recording to video medium. The raw image is oblong, so needs to be passed through a desqueezing circuit to be projected in its original form.

Standby

The state in which the circuit that receives infrared-signals from the remote control is active, but all other main circuits are turned on. The unit consumes a small amount of power in this state.

S Video signal

S stands for Separate. A method of sending signals with separate luminance (Y) and color (C) signals. Use a 4-pin mini DIN connector and cable for connection.

Sync.

Computers output signals with a given regular frequency, which you must synchronize the projector to in order to produce a good quality image. If you do not match the phase of the signal, the image may be flickery, faded, or distorted.

Test pattern

This unit contains test patterns which you can use to adjust the position and focus of the projected image on the screen.

Tracking

Computers output signals with a given regular frequency, which you must synchronize the projector to in order to produce a good quality image. If you do not match the phase of the signal, vertical stripes may appear on the image.

Vista size

A standard film size, with an aspect ratio of 1.85:1 in North America, and 1.66:1 in Europe.

3-2 pulldown detection style IP conversion

A function for directly converting interlace signal into sixty frame progressive signal used when receiving 60 field interlace signal from an image source recorded with the same 24 frames as movie film. This allows DVD and other materiel recorded with 24 frames to be projected on large screens as a natural, precise image with no loss of quality, comparable to a movie film.

* DLP™, DMD™, DarkChip2™, and DarkChip3™ are registered trademarks of the Texas Instruments corporation of America.

* "DCDi" is a trademark of Faroudja, a division of Genesis Microchip, Inc.

* HDMI, the HDMI logo and High-Definition Multimedia Interface are trademarks or registered trademark of HDMI Licensing LLC.

Compatible signal types

The following tables show the types and formats of signals the DPX-1200 can project. Signals other than those listed here may not be projected correctly.

◆ TV format 1 (Composite or S Video signals received at the VIDEO or S-VIDEO jack)

Signal type	V active (lines)	f (V) (Hz)	fsc (MHz)	Color system
NTSC	480	59.94	3.58	NTSC
PAL	576	50.00	4.43	PAL
SECAM	576	50.00	4.406, 4.25	SECAM
PAL60	480	59.94	4.43	PAL
NTSC4.43	576	59.94	4.43	NTSC
PAL-M	480	59.94	3.58	PAL
PAL-N	576	50.00	3.58	PAL

◆ TV Format 2 (Component/RGB TV signals received at the INPUT A and B, or component signals received at the D4 jack)

Signal type	H active (pixels)	V active (lines)	f (H) (kHz)	f (V) (Hz)
480i	720	483	15.734	59.940
576i	720	576	15.625	50.000
480p	720	480	31.469	59.940
576p	720	576	31.250	50.000
720p/50Hz	1280	720	37.500	50.000
720p/60Hz	1280	720	44.955	59.940
1035i	1920	1035	33.750	60.000
1080i/50Hz	1920	1080	28.125	50.000
1080i/60Hz	1920	1080	33.716	59.940

◆ PC Format (Analog RGB PC signals received at the INPUT A or B jack)

	Signal type	H active (pixels)	V active (lines)	f (H) (kHz)	f (V) (Hz)
VESA (*1)	VGA/60Hz	640	480	31.469	59.940
	VGA/72Hz	640	480	37.861	72.809
	VGA/75Hz	640	480	37.500	75.000
	VGA/85Hz	640	480	43.269	85.008
	SVGA/56Hz	800	600	35.156	56.250
	SVGA/60Hz	800	600	37.879	60.317

◆ HDMI Format (Component/RGB signals input from the HDMI jack)

Signal type	H active (pixels)	V active (lines)	f (H) (kHz)	f (V) (Hz)	Component type
VGA	640	480	31.469	59.94	RGB (*3)
480i	(1440) 720	480	15.734	59.94	RGB/YCbCr4:4:4/YCbCr4:2:2 (*4)
576i	(1440) 720	576	15.625	50	RGB/YCbCr4:4:4/YCbCr4:2:2 (*4)
480p	720 1440	480	31.469	59.94	RGB/YCbCr4:4:4/YCbCr4:2:2 (*4)
576p	720 1440	576	31.25	50	RGB/YCbCr4:4:4/YCbCr4:2:2 (*4)
720/60p	1280	720	37	59.94	RGB/YCbCr4:4:4/YCbCr4:2:2 (*4)
720/50p	1280	720	44.955	50	RGB/YCbCr4:4:4/YCbCr4:2:2 (*4)
1080/60i	1920	1080	33.716	59.94	RGB/YCbCr4:4:4/YCbCr4:2:2 (*4)
1080/50i	1920	1080	28.125	50	RGB/YCbCr4:4:4/YCbCr4:2:2 (*4)

(*3) VGA mode is only available for RGB signals.

(*4) You cannot select YCbCr4:2:2 mode manually. This mode only available when you set the unit to HDMI Auto mode.

Maintenance

◆ Regular care

Be sure to disconnect the power cable before doing any maintenance.

<Main unit>

Wipe with a soft cloth. Use a damp cloth with a mild detergent and then wipe with a dry cloth again if the unit is heavily soiled. Do not use strong solvents such as thinner or alcohol as they may damage the unit casing.

<Lens>

Use commercially available blowers or lens tissue to remove any dirt from the lens.

<Filter>

If dust accumulates on the ventilation port filter, the internal temperature of the unit rises, which may cause damage to the unit. Clean the filter approximately once every 200 hours. Remove the power cable from the AC outlet, and remove dust from the filter with a vacuum cleaner.

To prevent dust from entering the filter itself, be sure to vacuum the filter with the unit on its side.

◆ Replacing the filter

Replace the filter when it becomes difficult to remove dust from it.

1. Turn off the power and remove the power cable.
2. Carefully place the unit upside down on a soft cloth to prevent scratching.
3. Press the filter hook on the underside of the main unit to remove the filter.

4. Firmly attach the new filter. The lamp does not light if the filter is incorrectly attached.

Warning

- Contact a YAMAHA dealer or service center if you require replacement filters.

◆ Replacing the lamp

The lamp used as a light source in the DPX-1200 is a consumable item which will gradually lose its brightness during the course of use. It is advisable to replace the lamp when running time has exceeded 2000 hours.

You can check the lamp running time in the [Lamp Running Time] in the [Initial] menu group of the Menu screen. The LAMP warning indicator will blink when running time exceeds 2000 hours.

There will also be a message displayed on the screen. In this case, follow the instructions below to replace the lamp cartridge. For details on replacement of lamp cartridges, consult the store where you purchased the DPX-1200.

Warning

- Be sure to use the replacement lamp cartridge PJL-427. Other lamp cartridges are not suitable for use in the DPX-1200.
- If replacing the lamp of the projector that has been installed to the ceiling, you should remove the projector from the ceiling before replacing the lamp.
- Before starting to replace the lamp cartridge, turn off the power, disconnect the power cable after the fan has completely stopped, and wait at least one hour for the lamp to cool down.
- Do not remove any other screws than those specified in the following steps.
- The gases inside the lamp contain mercury vapor. Be careful the lamp may break if it gets old or overtasked. The life of a lamp differs depending on operation environments.

1. Loosen the lamp cover screws.

2. Remove the lamp cover.

3. Loosen the screws of the lamp cartridge.

4. Grip the handle and pull the lamp cartridge to remove it.

5. Insert the new lamp cartridge by reversing the above steps, and tighten the screws to fix it into place.

6. Replace the lamp cover and secure it with the screws. The lamp will not turn on if the cover is not securely fastened. Take care to attach it firmly in place.

7. Connect the unit to the power outlet, turn the unit on, and reset [Lamp Running Time] on the [Initial] group in the menu. (page 38)

Troubleshooting

Problem	Cause	Remedy
The DPX-1200 does not turn on.	The power cable is not plugged in.	➡ Plug the power cable in firmly.
	You attempted to turn on The DPX-1200 immediately after turning it off.	➡ Wait for approximately two minutes. <MEMO> • To protect the lamp, you cannot turn on power for two minutes after you turn it off.
	The filter cover is not correctly attached.	➡ Correctly attach the filter cover.
	The lamp cover is not correctly attached.	➡ Correctly attach the lamp cover.
No picture.	The lens cover has not been removed.	➡ Remove the lens cover.
	The DPX-1200 is not correctly connected to the other components.	➡ Check the connections.
	The input signal has not been correctly selected.	➡ Select the correct input signal with the INPUT button. Press the AUTO button on the remote control. Use the menu to adjust the signal setting to suit the input setting. ➡ [Initial]
	The picture is turned off.	➡ Press the HIDE button again to cancel the HIDE function.
	The computer is not set to display on the external monitor.	➡ Set the computer to display on the external monitor. (Refer to the computer operating instructions.)
Image is unstable.	The connection cables are not correctly attached to the connectors.	➡ Correctly connect the cables to the appropriate connectors.
Picture is blurred.	The lens is not correctly focused.	➡ Press the FOCUS button, and adjust the focus.
	The screen and the DPX-1200 are not facing each other directly.	➡ Adjust the projection angle and direction, and the height of the DPX-1200.
The image becomes cloudy.	There is condensation on the DPX-1200.	➡ Switch the DPX-1200 power off until the condensation disappears.
Cannot adjust focus or zoom, or the vertical position of the lens.	[Lens Adjustment Lock] in the menu is set to ON.	➡ Set correctly. Set [Lens Adjustment Lock] to off. Press the MENU button to display the menu and select [Setup] ➡ [Lens Adjustment Lock].
Remote control does not work correctly.	The batteries are exhausted.	➡ Replace both batteries with new ones.
	The remote control sensor is not set correctly.	➡ Set correctly. Press the MENU button to display the menu and select [Setup] ➡ [Remote Control Sensor].
	There is a fluorescent lamp near the remote control sensor being used.	➡ Turn off the remote control sensor near the fluorescent lamp, and use the other remote sensor.
	The remote control code switch is incorrectly set.	➡ Set the remote control code switch to the same ID number as the setting on the "REMOTE CONTROL ID" in the setting menu.

Problem	Cause	Remedy
COVER warning indicator lights up.	The filter cover is not correctly attached.	➔ Tightly attach the filter cover.
	The lamp cover is not correctly attached.	➔ Tightly attach the lamp cover.
LAMP warning indicator lights up or blinks.	Lamp running time has exceeded 2000 hours.	➔ Replace the lamp with a new one.
	The lamp has burned out.	➔ Replace the lamp with a new one.
TEMP warning indicator lights up.	The temperature inside the DPX-1200 is extremely high.	➔ Check that the ventilation slots are not covered.
FAN warning indicator lights up.	The fan is broken.	➔ Contact the store where the DPX-1200 was purchased.

- This unit uses a DMD™ chip for the picture display. Their highly accurate technology makes it possible to keep more than 99.99% of effective pixels, however, unexpectedly it can produce less than 0.01% of ineffective pixels. In such a case, missing or flashing of a few pixels can be found on the screen. These are characteristics of DMD™, not mechanical problems.

Message display

Message	Condition
No Signal	The unit is not receiving or detecting any signal at the selected input jack. This message is displayed together with the name of the input source selected with the INPUT button.
INPUT A (Component) (Example)	The input name selected by the INPUT button is displayed. It will turn off 2 seconds after the signal has been input.
Out Of Range	The unit is not able to decode the PC or HDMI signal currently being input.
Unknown Format	The unit is not able to decode the video signal currently being input.
Auto Sync...	The unit is setting itself to the most appropriate configuration for the RGB signal currently being received.
Memory 1—6 Now Processing	The memory setting number is displayed for two seconds.
The lamps has reached its recommended replacement time. Please replace with a new one.	This message is displayed when the power switch is turned on if the lamp running time exceeds 2000 hours. Press the ESCAPE button to remove the message.
Press again to enter standby.	Press the STANDBY/ON button once more to place the unit in standby mode.
Lens Adjustment is locked.	This message will display for two seconds if you press the V. POS, ZOOM, or FOCUS button when [Lens Adjustment Lock] is set to [On].
Invalid Operation	Appears in the menu operation guide when you press an invalid button during menu operation. This message displays for two seconds.

LED indicator meanings

LED indicator	State	Meaning
STANDBY/ON (*)	Unlit	Electrical fault.
	Lit orange	Standby
	Blinking green	Preparing for operation.
	Lit green	Operating
	Blinking orange	Cooling the lamp.
	Blinking red / blinking red and orange rapidly	Blinking red: Error in the LAMP/COVER/TEMP system Blinking red and orange rapidly: Error in the FAN system
LAMP	Unlit	Normal
	Blinking orange	The lamp running time has exceeded 2000 hours.
	Lit red	The lamp has burned out.
COVER	Unlit	Normal
	Lit red	The lamp cover or the filter cover is not attached correctly.
TEMP	Unlit	Normal
	Lit red	The temperature of the lamp or the interior of the case is abnormally high.
FAN	Unlit	Normal
	Lit red	The cooling fan has broken.

(*) This LED is also present on the front panel of the main unit.

Specifications

• Optical		
Projection mode	DLP™ (DMD™) type, 1280 X 720 pixels, 0.8 inch	
Lens	f=24.3 – 38.9 mm F=2.7 – 5.0, Electronic zoom(x 1.6), Electronic focus, Electronic lens shift	
Lamp	270 W SHP lamp	
Screen size	60–200 inch (16:9)	
Brightness	800 – 400 ANSI lm (depends on Iris Setting)	
Contrast	2500:1 to 5000:1 (depends on Iris Setting)
