# Chapter 1

## Introduction

### Overview

---

The CS1782 USB 2.0 DVI KVMP Switch charts a revolutionary new direction in KVM (Keyboard, Video, Mouse) switch functionality by combining a 2-port KVM switch with a 2-port USB 2.0 hub at the same time as providing an interface for a DVI monitor. The CS1782 also supports state-of-the-art 7.1 channel surround sound to give a theater digital audio experience that enlivens video playback.

As a KVM switch, it allows users to access two computers from a single USB keyboard, USB mouse, and monitor console. As a USB hub, it permits each computer to access any peripherals connected to the hub on a “one computer at a time” basis.

The CS1782’s independent (asynchronous) switching feature allows the KVM focus to be on one computer while the USB peripheral focus is on another. This eliminates the need to purchase a separate USB hub as well as the need to purchase separate stand-alone peripheral sharers – such as print servers, modem splitters, etc.

The CS1782 further improves on previous designs with DVI (Digital Visual Interface) connectors, and the transfer of keyboard and mouse data to the computers via a fast, reliable USB connection. DVI supports both digital video input (flat panel displays, data projectors, plasma displays, digital TVs and set-top boxes) and analog video input (traditional monitors and TVs).

In addition to the CS1782’s 7.1 channel surround sound functionality that recognizes the increased importance of sound, a single microphone can provide audio input to each of the computers, and you can listen to the audio output of each computer on a single set of speakers (on a one-at-a-time basis). As with the USB peripherals, the audio focus can be independent of the KVM focus.

Setup is fast and easy; simply plug cables into their appropriate ports. There is no software to configure, no installation routines, and no incompatibility problems. Since the CS1782 intercepts keyboard input directly, it will work on multiple computing platforms (PC (x86/x64), Macintosh PowerPC, and Sun Microsystems Sparc). There are two convenient methods to access the computers: port selection pushbuttons located on the unit’s front panel; and hotkey combinations entered from the keyboard.

# Chapter 2

## Hardware Setup

1. Important safety information regarding the placement of this device is provided on Page 29. Please review it before proceeding.
2. Make sure that power to all the devices you will be installing has been turned off. You must unplug the power cords of any computers that have the Keyboard Power On function.

### Cable Connections

---

To set up your CS1782 installation, refer to the installation diagrams on the following pages (the numbers in the diagrams correspond to the steps, below), and do the following:

1. Plug your USB keyboard and USB mouse into the USB Console Ports located on the unit's back panel.
2. Plug your microphone, speakers, and monitor into the Console ports located on the unit's rear panel.

---

**Note:** Use the green and pink audio ports only for 2.1 channel surround sound audio. Use all audio ports for 7.1 channel surround sound.

---

3. Using the KVM cable set, plug the DVI connector into any available DVI socket in the CPU Port section of the switch, then plug the accompanying USB, microphone and speaker connectors into their corresponding USB, microphone, and speaker sockets. If you are using 7.1 channel surround sound, also use the additional custom audio cable set provided with the package. See 4b, following.

---

**Note:** Verify that all the plugs are in the same CPU Port sockets (all in Port 1, all in Port 2, etc.), and that each socket is marked with an appropriate icon.

---

4. At the other end of the cable, plug the USB, video, microphone, and speaker cables into their respective ports on the computer. There are two audio options:
  - a. For a standard audio installation, just use the ATEN custom KVM cable set provided with the package. This supports 2.1 channel surround sound.
  - b. To utilize the 7.1 channel surround sound function, in addition to 4a above, also use the extra custom audio cable set provided. Attach the cables to the corresponding colored audio jacks on the motherboard.
5. Plug your USB peripherals into the type A sockets (one is located on the front, the second is located on the rear).
6. Plug the power adapter that came with your switch into an AC power source, then plug power adapter cable into the switch's Power Jack.
7. Power on the computers.

## 7.1 Channel Surround Sound Audio Installation

# Chapter 3

## Basic Operation

### Manual Switching

---

There are two convenient methods to access the computers: Manual – which involves pressing the port selection pushbuttons located on the unit’s front panel; and Hotkey – which involves entering combinations from the keyboard. Hotkey port selection is discussed in the next chapter.

For manual port selection:

- ◆ Press and release a port selection pushbutton to bring the KVM focus to the computer attached to its corresponding port. The USB and Audio focus do not change – they stay with the port that they are already on.
- ◆ Press a port selection pushbutton twice to bring the audio focus to the computer attached to its corresponding port.
- ◆ Press and hold a port selection pushbutton for more than 2 seconds to bring the KVM focus plus the USB and Audio focus to the computer attached to its corresponding port.
- ◆ Press and hold port selection pushbuttons 1 and 2 for more than 2 seconds to start Auto Scan Mode, see page 13 for details.

---

**Note:** Press and release either port selection pushbutton to stop Auto Scan Mode. The KVM focus goes to the computer attached to the corresponding port of the pushbutton you pressed.

---

### Hot Plugging

---

The CS1782 supports USB hot plugging – components can be removed and added back into the installation by unplugging their cables from the USB hub ports without the need to shut the unit down.

## Powering Off and Restarting

---

If it becomes necessary to Power Off the unit, before starting it back up you must do the following:

1. Shut down all the computers that are attached to the switch.
2. Unplug the switch's power adapter cable.
3. Wait 10 seconds, then plug the switch's power adapter cable back in.
4. After the switch is up, Power On the computers.

## Port ID Numbering

---

Each CPU port on the CS1782 switch is assigned a port number (1 or 2 for the CS1782). The port numbers are marked on the rear panel of the switch (see page 6 for details).

The Port ID of a computer is derived from the CPU port number it is connected to. For example, a computer connected to CPU port 2 has a Port ID of 2.

The Port ID is used to specify which computer gets the KVM USB peripheral, and audio focus with the Hotkey port selection method (see page 11 for details).

## Alternative Manual Port Selection Settings

---

When Hotkey Setting Mode has been activated, pressing [S] will invoke the alternative front panel pushbutton manual port selection functions as follows (see page 19 also):

- ♦ Press a port selection pushbutton once to bring the KVM, audio and USB focus to the computer attached to its corresponding port.
- ♦ Press a port selection pushbutton twice to bring the audio focus to the computer attached to its corresponding port.
- ♦ Press and hold a port selection pushbutton for more than 2 seconds to bring only the KVM focus to the computer attached to its corresponding port.
- ♦ Press and hold port selection pushbuttons 1 and 2 for more than 2 seconds to start Auto Scan Mode, see page 13 for details.

# Chapter 4

## Keyboard Port Operation

The CS1782 provides an extensive, easy-to-use, hotkey function that makes it convenient to control and configure your KVM installation from the keyboard. Hotkeys provide asynchronous (independent) switching of the KVM, USB hub and audio focus. If you wish, you can give one computer the KVM console focus and the other the USB hub or the audio focus.

### Port Switching

---

All port switches begin with tapping the **Scroll Lock** key twice. The tables below describe the actions that each combination performs.

---

**Note:** If using the Scroll Lock key conflicts with other programs running on the computer, the **Ctrl** key can be used, instead. See *Alternate Port Switching*, page 15, for details.

---

### Cycling Through the Ports

Hotkey	Action
[Scroll Lock] [Scroll Lock] [Enter]	Brings the KVM, USB hub, and audio focus from the port that currently has the KVM focus to the other port on the installation (1 to 2; 2 to 1 for the CS1782).
[Scroll Lock] [Scroll Lock] [K] [Enter]	Brings only the KVM focus from the port that currently has it to the other port on the installation. The USB and audio focus remain where they are.
[Scroll Lock] [Scroll Lock] [U] [Enter]	Brings only the USB hub focus from the port that currently has it to the other port on the installation. The KVM and audio focus remain where they are.
[Scroll Lock] [Scroll Lock] [S] [Enter]	Brings only the audio focus from the port that currently has it to the other port on the installation. The KVM and USB hub focus remain where they are.

---

## Going Directly to a Port

Hotkey	Action
[Scroll Lock] [Scroll Lock] [n] [Enter]	Brings the KVM, USB hub, and audio focus to the computer attached to the port corresponding to the specified Port ID.
[Scroll Lock] [Scroll Lock] [n] [K] [Enter]	Brings only the KVM focus to the computer attached to the specified port. The USB hub and audio focus remain where they are.
[Scroll Lock] [Scroll Lock] [n] [U] [Enter]	Brings only the USB hub focus to the computer attached to the specified port. The KVM and audio focus remain where they are.
[Scroll Lock] [Scroll Lock] [n] [S] [Enter]	Brings only the audio focus to the computer attached to the specified port. The KVM and USB hub focus remain where they are.
[Scroll Lock] [Scroll Lock] [n] [K] [U] [Enter]	Brings the KVM and USB hub focus to the computer attached to the specified port. The audio focus remains where it is.
[Scroll Lock] [Scroll Lock] [n] [K] [S] [Enter]	Brings the KVM and audio focus to the computer attached to the specified port. The USB hub focus remains where it is.
[Scroll Lock] [Scroll Lock] [n] [U] [S] [Enter]	Brings the USB hub and audio focus to the computer attached to the specified port. The KVM focus remains where it is.

---

**Note:** The **n** stands for the computer's Port ID number (1 or 2). See *Port ID Numbering*, page 10, for details. Replace the **n** with the appropriate Port ID when entering hotkey combinations.

---

## **Auto Scanning**

The CS1782's Auto Scan feature automatically cycles the KVM focus through the computer ports at regular intervals. This allows you to monitor the computer activity without having to take the trouble of switching from port to port manually. See the table below for details.

<b>Hotkey</b>	<b>Action</b>
[Scroll Lock] [Scroll Lock] [A] [Enter]	Invokes Auto Scan. The KVM focus cycles from port to port at 5 second intervals. Five second intervals is the Default setting.
[Scroll Lock] [Scroll Lock] [A] [n] [Enter]	The KVM focus cycles from port to port at <b>n</b> second intervals.

- 
- Note:**
1. The **n** stands for the number of seconds that the CS1782 should dwell on a port before moving on to the next. Replace the **n** with a number between 1 and 99 when entering this hotkey combination.
  2. While Auto Scan Mode is in effect, ordinary keyboard and mouse functions are suspended – only Auto Scan Mode compliant keystrokes and mouse clicks can be input. You must exit Auto Scan Mode in order to regain normal control of the console.
  3. Although the video focus switches from port to port, the keyboard, mouse, and USB focus do not switch. They stay at the port they were on when Auto Scanning started.
  4. To exit Auto Scan Mode, press the **Esc** key, or the **Spacebar**.
-

## Hotkey Setting Mode

---

Hotkey Setting Mode is used to set up your CS1782 switch configuration. All operations begin with invoking Hotkey Setting Mode (HSM).

### Invoking HSM

To invoke HSM do the following:

1. Press and hold down [**Num Lock**].
2. Press and release [-].
3. Release [**Num Lock**].

---

**Note:** There is an alternate key combination to invoke HSM. See below for details.

---

When HSM is active, the Caps Lock, and Scroll Lock LEDs flash in succession to indicate that HSM is in effect. They stop flashing and revert to normal status when you exit HSM.

Ordinary keyboard and mouse functions are suspended – only Hotkey compliant keystrokes and mouse clicks (described in the sections that follow), can be input.

At the conclusion of some hotkey operations, you automatically exit hotkey mode. With some operations, you must exit manually. To exit HSM manually, press the **Esc** key, or the **Spacebar**.

## **Alternate HSM Invocation Keys**

An alternate set of HSM invocation keys is provided in case the default set conflicts with programs running on the computers.

To switch to the alternate HSM invocation set, do the following:

1. Invoke HSM (see page 14).
2. Press and release [**H**].

The HSM invocation keys become the Ctrl key (instead of Num Lock) and the F12 key (instead of minus).

---

**Note:** This procedure is a toggle between the two methods. To revert back to the original HSM invocation keys, invoke HSM, then press and release the **H** key again.

---

## **Alternate Port Switching Keys**

The port switching activation keys can be changed from tapping the Scroll Lock key twice ([Scroll Lock] [Scroll Lock]) to tapping the Ctrl key twice. To change the port switching activation keys, do the following:

1. Invoke HSM (see page 14).
2. Press and release [**T**].

---

**Note:** This procedure is a toggle between the two methods. To revert back to the original [Scroll Lock] [Scroll Lock] method, invoke HSM, then press and release the **T** key again.

---

## **Keyboard Operating Platform**

The CS1782's default port configuration is for a PC compatible keyboard operating platform. If your console uses a PC compatible keyboard and you have a Mac or Sun attached to a port, for example, you can change the port's keyboard operating platform configuration so that the PC compatible keyboard emulates the Mac or Sun keyboard. The procedure is as follows:

1. Bring the KVM focus to the port you want to set.
2. Invoke HSM (see page 14).
3. Press and release the appropriate Function key (see table below). After completing this procedure, you automatically exit HSM.

<b>Function Key</b>	<b>Operation</b>
[F2]	Enables Mac keyboard emulation, see <i>Mac Keyboard Emulation</i> , page 27, for details.
[F3]	Enables Sun keyboard emulation, see <i>Sun Keyboard Emulation</i> , page 28, details.
[F10]	Auto detects the keyboard operating platform (for PC compatible systems). Activates Pass Through keyboard mode (keystrokes are sent directly to the computer instead of through the Mac or Sun emulator).

## **List Hotkey Settings**

To see a listing of the current hotkey settings, do the following:

1. Invoke HSM (see page 14).
2. Press and release **[F4]**.
3. Open a text editor or word processor and use its *Paste* function to display the settings.

## **USB Reset**

If the USB loses focus and needs to be reset, do the following:

1. Invoke HSM (see page 14).
2. Press and release **[F5]**

## **Hotkey Beeper Control**

The Beeper can be hotkey toggled On and Off. To toggle the Beeper, do the following:

1. Invoke HSM (see page 14).
2. Press and release **[B]**.

The Beeper toggles On or Off.

## **Disable Port Switching Keys**

To disable the Port Switching Keys (**[Scroll Lock] [Scroll Lock] / [Ctrl] [Ctrl]**), do the following:

1. Invoke HSM (see page 14).
2. Press **[X] [Enter]**.

---

**Note:** This procedure is a toggle. To enable the Port Switching keys repeat steps 1 and 2.

---

## **Firmware Upgrade Mode**

To set the CS1782 to Firmware Upgrade Mode, do the following:

1. Invoke HSM (see page 14).
2. Key in: upgrade
3. Press **[Enter]**.

The front panel LEDs flash to indicate Firmware Upgrade Mode is in effect.

---

# The Firmware Upgrade Utility

The Windows-based Firmware Upgrade Utility (FWUpgrade.exe) provides a smooth, automated process for upgrading the KVM switch's firmware.

The Utility comes as part of a Firmware Upgrade Package that is specific for each device. New firmware upgrade packages are posted on our Website as new firmware revisions become available. Check the web site regularly to find the latest packages and information relating to them:

<http://www.aten.com>

### Before you Begin

---

To prepare for the firmware upgrade, do the following:

1. From a computer that is not part of your KVM installation go to our Internet support site and choose the model name that relates to your device (CS1782) to get a list of available Firmware Upgrade Packages.
2. Choose the Firmware Upgrade Package you want to install (usually the most recent), and download it to your computer.
3. Use the *Firmware Upgrade Cable* provided to connect a COM port on your computer to the *Firmware Upgrade Port* of your switch.

4. Shut down the computers on your CS1782 installation.

5. Invoke Firmware Upgrade Mode (see page 18).

The front panel LEDs flash together to indicate Firmware Upgrade Mode is in effect.

## Starting the Upgrade

---

To upgrade your firmware:

1. Run the downloaded Firmware Upgrade Package file – either by double clicking the file icon, or by opening a command line and entering the full path to it.

The *Firmware Upgrade Utility* Welcome screen appears:

---

**Note:** The screens shown in this section are for reference only. The wording and layout of the actual screens put up by the Firmware Upgrade Utility may vary slightly from these examples.

---

2. Read the License Agreement (enable the *I Agree* radio button).
3. Click **Next** to continue. The Firmware Upgrade Utility main screen appears:

The Utility inspects your installation. All the devices capable of being upgraded by the package are listed in the *Device List* panel. As you select a device in the list, its description appears in the *Device Description* panel.

4. After you have made your device selection(s), Click **Next** to perform the upgrade.

If you enabled *Check Firmware Version*, the Utility compares the device's firmware level with that of the upgrade files. If it finds that the device's version is higher than the upgrade version, it brings up a dialog box informing you of the situation and gives you the option to Continue or Cancel.

If you didn't enable *Check Firmware Version*, the Utility installs the upgrade files without checking whether they are a higher level, or not.

As the Upgrade proceeds, status messages appear in the Status Messages panel, and the progress toward completion is shown on the *Progress* bar.

## Upgrade Succeeded

After the upgrade has completed, a screen appears to inform you that the procedure was successful:

Click **Finish** to close the Firmware Upgrade Utility.

After a successful completion, the switches exit Firmware Upgrade Mode, and reset themselves.

## Upgrade Failed

---

If the *Upgrade Succeeded* screen doesn't appear, it means that the upgrade failed to complete successfully, in which case you should do the following:

1. Power off the CS1782 and remove its housing.
2. Using a jumper cap, short the jumper on the mainboard labeled J17. The diagram below indicates the jumper location on the CS1782 board:

3. Power on the CS1782. It will now work with the factory default firmware.
4. Do the firmware upgrade procedure again.
5. After the upgrade procedure completes, power off the switch, remove the jumper cap from J17, close the housing, and power the CS1782 on again.

## Troubleshooting

Symptom	Possible Cause	Action
Mouse and/or Keyboard not responding.	Improper mouse and/or keyboard reset.	Unplug the cable(s) from the console port(s), then plug it/them back in.
	KVM switch needs to be reset.	Power off all devices on the installation (see the note at the top of page 11); power off the KVM switch; wait five seconds; then power up
USB devices not responding.	USB ports need to reset.	Unplug the device's USB cable from the USB port on the switch's rear panel, then plug it back in.
	PC or OS does not support USB 2.0.	The CS1782 has a built-in USB 2.0 hub, so will not support PCs or OS that do not support USB 2.0.  For OS that do not support USB 2.0, keyboard and mouse functions can be reset using the [F1] hotkey function. See the note under <i>Mouse Emulation Control</i> on page 18.
Device not recognized (Windows).	Windows timing problem.	<ol style="list-style-type: none"> <li>1. Unplug the KVM cable from the computer's USB port.</li> <li>2. Go into Windows' <i>System Settings</i> and remove the <i>Unknown Device</i> entry.</li> <li>3. Plug the KVM cable back in. Windows will now recognize the device.</li> </ol>
There are ghost images on the external monitor.	The distance between the external console and the CS1782 is too great. The maximum VGA cable distance should not exceed 20m and, in some cases, may need to be shorter. Replace the VGA cable with one of an appropriately short length.
