Compendium
of HPLC Applications for
Traditional Chinese Medicine
and Chemical Drugs in
China Pharmacopoeia

Agilent Technologies

**Compendium of HPLC Applications
for Traditional Chinese Medicine and
Chemical Drugs in China Pharmacopoeia**

Preface

This compendium is a collection of analysis methods for traditional Chinese medicine and chemical drugs in the China Pharmacopoeia, which use high performance liquid chromatography (HPLC) as the analysis technique. HPLC was first adopted in the China Pharmacopoeia as an analysis technique in 1985 on account of its selectivity and sensitivity. The widespread use of HPLC instrumentation in China has led to an increase in the adoption of the technique in the China Pharmacopoeia. The 2005 edition included 1366 applications of HPLC, which has now become the most popular analysis method in the Pharmacopoeia.

This compendium is divided into two parts. The first part describes HPLC analysis methods for traditional Chinese medicine from Volume I of the 2005 edition of the China Pharmacopoeia. For many methods, both the Latin and English names are given. Part two of the compendium describes the HPLC methods for chemical drugs from Volume II of the 2005 edition of the China Pharmacopoeia.

The page numbers in this compendium correspond to those in the *HPLC Chromatogram Compendium of China Pharmacopoeia*, published in 2005 by People's Medical Publishing House, Beijing, China, ISBN 7-117-07114-1.

Contents

Japanese Ardisia Herb (Herba Ardisiae Japonicae).....	3	Shortscape Fleabane Herb (Herba Erigerontis)	42	Amur Cook Tree (Cortex Phello- dendri Amurensis)	80
Aifu Nuangong Pills.....	4	Dengzhan Xixin Injection Fluid ..	43	Guishao Dihuang Pills.....	81
Anshen Buxin Pills	5	Rehmannia Root (Radix Rehmanniae)	44	Guishao Dihuang Pills.....	82
Anshen Capsules.....	6	Creeping Euphorbia (Herba Euphorbiae Humifusae)....	45	Guifu Dihuang Pills.....	83
Anzhong Pian	7	Dieda Pills.....	46	Guifu Dihuang Pills.....	84
Bazhen Yimu Pills	8	Obtuseleaf Erycibe Stem (Caulis Erycibes)	47	Guilin Xiguashuang	85
Bazheng Heji.....	9	Dingkun Pills	48	Lotus Leaf (Folium Nelumbinis).86	
Chinaroot Greenbrier Rhitome (Rhizoma Smilacis Chinae)	10	Pubescent Angelica Root (Radix Angelicae Pubescenti).....	49	Heye Pills	87
Baidai Wan.....	11	Duyiwei Capsules	50	Bigflower Rhodiola Root (Radix et Rhizoma Rhodiolae).....	88
White Peony Rooz (Radix Paeoniae)	12	Chinese Clinopodium Granules.....	51	Red Ginseng (Radix et Rhizoma Ginseng Rubra)	89
Dahurian Angelica Root (Radix Angelicae Dahuricae)	13	Chinese Clinopodium Tablets	52	Officinal Magnolia Flower (Flos Magnoliae Officinalis).....	90
Baihe Gujin Wan	14	Erchen Pills	53	Common Fenugreek Seed (Semen Trigonellae)	91
Bailing Jiaonang.....	15	Erkangning Syrup	54	Giant Knotweed (Rhizoma et Radix Polygoni Cuspidati).....	92
Baokening Keli.....	16	Ertong Qingfei Pills	55	Giant Knotweed (Rhizoma et Radix Polygoni Cuspidati).....	93
Baohe Wan.....	17	Curcuma Oils.....	56	Hugan Tablets.....	94
Baohe Watered Pills	18	Fourstamen Stephania Root (Radix Stephaniae Tetrandrae)....	57	Pagodatree Flower (Flos Sophorae)	95
Baoji Wan.....	19	Thomson Kudzuvine Root (Radix Puerariae Thomsonii).....	58	Huaijiao Pills	96
Biyan Tablets.....	20	Fenghan Kesou Granules.....	59	Chinese Cork Tree (Cortex Phellodendri Chinensis)	97
Biyuanshu Mixture	21	Fubao Granules.....	60	Huanglian Shangqing Pills	98
Malaytea Scurfpea Fruit (Fructus Psoraleae).....	22	Compound Danshen Dripping Pills.....	61	Milkvetch Root (Radix Astragali).....	99
Bushen Yinao Tablets.....	23	Fufang Guazijin Granules	62	Baical Skullcap Extrtact (Extractum Scutellariae Siccus).....	100
Buzhong Yiqi Watered Pills.....	24	Compound Berberine Hydrochloride Tablets.....	63	Huixiang Juhe Pills.....	101
Chenxiang Huaqi Pills	25	Compound Berberine Hydrochloride Tablets.....	64	Huoxue Zhitong Powder.....	102
Chitong Xiaoyanling Granules	26	Compound Yuxingcao Tablets	65	Huoxiang Zhengqi Oral Liquid ..	103
Paris Root (Rhizoma Paridis).....	27	Fuke Tiaojing Tablets.....	66	Huoxiang Zhengqi Soft Capsules.....	104
Nippon Yam Rhizome (Rhizoma Dioscoreae Nipponicae)	28	Fuke Shiwei Tablets	67	Huoxiang Zhengqi Tincture	105
Chuanxing Chantiao Pills	29	Liquorice Root (Radix et Rhizoma Glycyrrhizae)	68	Jiawei Xiaoyao Pills.....	106
Manyprickle Acanthopanax (Radix et Rhizoma seu Caulis)....	30	Liquorice Root (Radix et Rhizoma Glycyrrhizae)	69	Jianmin Yanhou Tablets	107
Extractum Acanthopanacis Senticosi.....	31	Extractum Glycyrrhizae.....	70	Jianwei Xiaoshi Tablets	108
Manyprickle Acanthopanax Tablets.....	32	Extractum Glycyrrhizae Liquidum	71	Turmeric (Rhizoma Curcumae Longae)	109
Rhubarb (Radix et Rhizoma Rhei).....	33	Ganmao Qingre Granules	72	Jinguo Tablets	110
Extractum Rhei Liquidom	34	Ganmao Tuire Granules.....	73	Common Clubmoss Herb (Herba Lysimachiae)	111
Dahuang Zhechong Pills	35	Gegen Qinlian Pills	74	Jinsang Liyan Pills	112
Dyers Woad Leaf (Folium Isatidis)	36	Gejie Dingchuan Pills.....	75	Jinsang Sanjie Pills	113
Danshen Root (Radix et Rhizoma Salviae Miltiorrhizae)....	37	Gentongping Granules	76	Japanese Honeysuckle Flower (Flos Lonicerae Japonicae)	114
Danshen Root (Radix et Rhizoma Salviae Miltiorrhizae)....	38	Chinese Mahonia Stem (Caulis Mahoniae)	77	Jingzhi guanxin Tablets.....	115
Danle Capsules.....	39	Gongxuening Capsules	78	Jingfukang Granules.....	116
Danning Tablets	40	Guben Kechuan Tablets.....	79		
Chinese Angelica (Radix Angelicae Sinensis)	41				

Jiuqi Niantong Pills.....	117	Niu Huang Jiangya Pills.....	159	Shaoshangling Tincture	203
Jiuwei Qianghuo Pills.....	118	Niu Huang Jiedu Tablets.....	160	Common Cnidium Fruit	
Red Tangerine Peel		Niu Huang Jiedu Pills.....	161	(Fructus Cnidii)	204
(Exocarpium Citri Rubrum).....	119	Niu Huang Qianjin Powder	162	Blackberry Lily Rhizome	
Juhong Tanke Mixture	120	Niu Huang Shangqing Pills.....	163	(Rhizoma Belamcandae).....	205
Juhong Pills	121	Niu Huang Xiaoyan Tablets.....	164	Shenjing Zhike Pills	206
Cassia Seed (Semen Cassiae)....	122	Qiju Dihuang Pills	165	Shenqi Wuweizi Tablets	207
Kaixiong Shunqi Pills	123	Qiju Dihuang Pills	166	Shensu Pills	208
Kanggan Granules.....	124	Qipi Pills.....	167	Shengxue Pills.....	209
Kanggu Zengsheng Capsules.....	125	Qizhi Weitong Keli	168	Shiquan Dabu Pills.....	210
Kouyanqing Granules.....	126	Qiangjin Zhidai Pills		Shearer's Pyrrosia Leaf	
Lightyellow Sophora Root		(Watered Pills)	169	(Folium Pyrrosiae)	211
(Radix sophorae Flavescens) .	127	Pharbitis Seed		Shugan Hewei Pills.....	212
Lidan Paishi Tablets	128	(Semen Pharbitidis).....	170	Shugan Pills	213
Weeping Forsythia Extract		Qinlian Tablets	171	Shuanghuanglian Granules.....	214
(Extractum Forsythiae Siccus) .	129	Ash Bark (Cortex Fraxini).....	172	Shuanghuanglian Mixture.....	215
Lingyang Ganmao Tablets	130	Qingfei Yihuo Pills	173	Shuanghuanglian Mixture.....	216
Lingyang Qingfei Pills.....	131	Orientvine Stem		Shuanghuanglian Mixture.....	217
Liuwei Dihuang Pills.....	132	(Caulis Sinomenii)	174	Shuanghuanglian Tablets.....	218
Liuwei Dihuang Pills.....	133	Qingguo Pills	175	Shuanghuanglian Tablets.....	219
Liuying Pills	134	Qinghou Liyan Granules	176	Silybum Marianum Fruit	
Longdan Xiegan Pills.....	135	Qinghouyan Mixture.....	177	(Fructus Silybi)	220
Longqing Tablets.....	136	Qinglin Granules	178	Sishen Pills	221
Aloe.....	137	Qingning Pills	179	Siwu Mixture	222
Lusika Pills	138	Qingwen Jiedu Pills	180	Sizheng Pills	223
Dogbane Leaf		Qingxuan Pills	181	Songling Xuemaikang	
(Folium Apocyni Veneti).....	139	Mile Swertia Tablets.....	182	Capsules.....	224
Ephedra Herb		Qingyin Pills	183	Buckeye Seed	
(Herba Ephedrae).....	140	Reyanning Granules	184	(Semen Aesculi).....	225

Traditional Chinese Medicine

Japanese Ardisia Herb (*Herba Ardisiae Japonicae*) – 矮地茶

Sample source

Commercially available Japanese Ardisia Herb

Chemical reference substances

Bergenin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1532-200202)

Preparation of test solution

Accurately weigh 0.1 g of the fine powder in a conical flask. Accurately add 10 mL of methanol, weigh, treat ultrasonically for 40 minutes, allow to cool, weigh again, replenish the lost weight with methanol, mix well and filter.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-water (20:80)
- Detector wavelength: 275 nm
- Flow rate: 1.0 mL/min
- Injection volume: 2 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r
Bergenin	3.599	5.518	23.65	227.6	7784	1.04

Aifu Nuangong Pills (*Aifu Nuangong Wan*) – 艾附暖宫丸

Sample source

Commercially available Aifu Nuangong Pills

Chemical reference substances

Paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0736-200220)

Preparation of test solution

Cut the pills into pieces. Accurately weigh 0.8 g in a stoppered conical flask, accurately add 10 mL of 50 % methanol, stopper well, and weigh. Treat ultrasonically for 40 minutes, allow to cool, weigh again, replenish the lost weight with 50 % methanol, shake well, filter through a millipore membrane (0.45 µm) and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: acetonitrile-0.1 % phosphoric acid (12:88)
- Detector wavelength: 230 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r
Paeoniflorin	8.928	11.91	39.20	715.5	10274	0.99

Anshen Buxin Pills (*Anshen Buxin Wan*) – 安神补心丸

Sample source

Commercially available Anshen Buxin Pills

Chemical reference substances

Schisandrin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110857-200203)

Preparation of test solution

Accurately weigh 15 pills, grind to a fine powder and mix well. Accurately weigh 0.5 g, accurately add 25 mL of methanol, weigh, treat ultrasonically for 30 minutes, allow to reach room temperature, weigh again and replenish the lost weight with methanol. Mix well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 42 °C
- Mobile phase: methanol-water (50:50)
- Detector wavelength: 250 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r
Schisandrin	11.087	30.218	4.76	165.0	17750	1.02

Anshen Capsules (*Anshen Jiaonang*) – 安神胶囊

Sample source

Commercially available Anshen Capsules

Chemical reference substances

Schisandrin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110857-200203)

Preparation of test solution

Grind the content of the capsules to a fine powder and mix well. Accurately weigh 1.0 g of the powder in a stoppered conical flask. Accurately add 25 mL of a mixture of chloroform and methanol (2:1), weigh, treat ultrasonically for 40 minutes, allow to cool, weigh again, replenish the lost weight with the mixture of chloroform and methanol (2:1), mix well and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water (58:42)
- Detector wavelength: 250 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Anzhong Tablets (*Anzhong Pian*) – 安中片

Sample source

Commercially available Anzhong Tablets

Chemical reference substances

Ammonium glycyrrhizinate (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0731-9704)

Preparation of test solution

Accurately weigh 20 tablets or film-coated tablets with coating removed, grind well, accurately weigh 1 g in a stoppered conical flask, accurately add 10 mL of the mobile phase, stopper tightly and weigh. Treat ultrasonically for 30 minutes, allow to cool, weigh again, replenish the lost weight with the mobile phase, and shake well. Filter through a millipore membrane (0.45 µm) and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-0.2mol/L ammonium acetate-glacial acetic acid (68:32:1)
- Detector wavelength: 252 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Bazhen Yimu Pills (*Bazhen Yimu Wan*) – 八珍益母丸

Sample source

Commercially available Bazhen Yimu pills

Chemical reference substances

Paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0736-200220)

Preparation of test solution

Cut a quantity of the pills into pieces and mix well, take 0.2 g of the pieces and accurately weigh in a stoppered conical flask. Accurately add 10 mL of dilute ethanol, stopper well, weigh and treat ultrasonically for 40 minutes. Allow to cool to room temperature, weigh again and replenish the lost weight with dilute ethanol. Mix thoroughly, centrifuge and use the supernatant liquid as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: acetonitrile-0.1 % phosphoric acid solution (13:87)
- Detector wavelength: 230 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r
Paeoniflorin	7.116	9.739	13.46	198.3	10099	1.00

Bazheng Mixture (*Bazheng Heji*) – 八正合剂

Sample source

Commercially available Bazheng Heji

Chemical reference substances

Geniposide (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110749-200309)

Preparation of test solution

Accurately measure 5 mL of the mixture in a 50 mL volumetric flask, dilute to volume with dilute ethanol and mix well, centrifuge and use the supernatant liquid as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18 4.6×150 mm, 5 μ m (993967-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-water (10:90)
- Detector wavelength: 238 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 μ L

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r
Geniposide	6.344	11.016	63.14	1120.6	9221	1.05

Chinaroot Greenbrier Rhitome (*Rhizoma Smilacis Chinae*) – 菝葜

Sample source

Commercially available Chinaroot Greenbrier Rhizome

Chemical reference substances

Diosgenin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1539-200201)

Preparation of test solution

Accurately weigh 8 g of the powder into a Soxhlet extractor (No. 2 sieve), add a quantity of ethanol, and soak overnight, heat under reflux until the extract is colorless. Recover the solvent to about 100 mL, add 16 mL of hydrochloric acid, heat under reflux on a water bath for 2 hours, allow to cool, and extract with four 40 mL quantities of petroleum ether (60-90 °C) by shaking. Combine the extracts, evaporate the solvent to dryness. Dissolve the residue in acetonitrile and transfer to a 10 mL volumetric flask, dilute with acetonitrile to volume, mix well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18, 4.6×250 mm, 5 µm (990967-902)
- Column temperature: 35 °C
- Mobile phase: acetonitrile-water (72:28)
- Detector wavelength: 203 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector
- System control through Agilent ChemStation revision B.01.01

Diosgenin	1.607	6.517	35.20	243.4	21754	1.05

Baidai Pills (*Baidai Wan*) – 白帶丸

Sample source

Commercially available Baidai Wan

Chemical reference substances

Berberine hydrochloride (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110713-200209)

Preparation of test solution

Grind a quantity of the pills to a fine powder and mix well. Accurately weigh about 0.2 g of the powder, accurately add 25 mL of a mixture of methanol and hydrochloric acid (1:100), weigh, heat under reflux for 30 minutes, allow to cool to room temperature, weigh again and replenish the lost weight with a mixture of methanol and hydrochloric acid (1:100). Mix well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C8 4.6×150 mm, 5 µm (993967-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-0.05mol/L potassium dihydrogen phosphate solution (adjust to pH 5.05 with sodium hydroxide TS) (25:75)
- Detector wavelength: 346 nm

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r
Berberine	5.886	10.33	25.17	370.3	11860	1.10

White Peony Root (*Radix Paeoniae*) – 白 芍

Sample source

Commercially available White Peony Root (Zhejiang)

Chemical reference substances

Paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0736-200220)

Preparation of test solution

Accurately weigh 0.1 g of the powder in a 50 mL volumetric flask, add 35 mL of diluted ethanol, treat ultrasonically for 30 minutes, allow to cool and dilute with dilute ethanol to volume, mix well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: acetonitrile-0.1 % phosphoric acid (14:86)
- Detector wavelength: 230 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r
Paeoniflorin		8.007	35.12	507.6	7126	0.96

Dahurian Angelica Root (*Radix Angelicae Dahuricae*) – 白 芷

Sample source

Commercially available Dahurian Angelica Root

Chemical reference substances

Imperatorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110826-200307)

Preparation of test solution

Accurately weigh 0.2 g of the powder in a 25 mL volumetric flask, add 45 mL of methanol, treat ultrasonically for 60 minutes, allow to cool and dilute with methanol to volume, and mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-water (55:45)
- Detector wavelength: 300 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Imperatorin	14.88	19.058	9.22	263.2	10316	0.99

Baihe Gujin Pills (*Baihe Gujin Wan*) – 百合固金丸

Sample source

Commercially available Baihe Gujin Wan

Chemical reference substances

Paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110736-200220)

Preparation of test solution

Cut the pills into pieces and mix well. Accurately weigh about 1 g in a stoppered conical flask, accurately add 10 mL of dilute ethanol, stopper well, weigh and allow to stand overnight. Treat ultrasonically for 40 minutes, allow to cool to room temperature, weigh again and replenish the lost weight with dilute ethanol. Mix well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: acetonitrile-water (11:89)
- Detector wavelength: 230 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Bailing Capsules (*Bailing Jiaonang*) – 百令胶囊

Sample source

Commercially available Bailing Jiaonang

Chemical reference substances

Adenosine (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110879-200202)

Preparation of test solution

Accurately weigh 0.5 g of the content of the capsule in a stoppered conical flask, mix well. Accurately add 20 mL of ether, stoppered tightly, soak for 30 minutes, filter and discard ether. Evaporate the residue to dryness. Accurately add 50 mL of 0.5 % phosphoric acid, stopper tightly, accurately weigh, treat ultrasonically for 30 minutes, cool, accurately weigh again, replenish the lost weight with 0.5 % phosphoric acid, mix well and allow to stand. Filter the supernatant liquid through a millipore membrane (0.45 μm), use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX Bonus-RP, 4.6 \times 250 mm, 5 μm (880668-901)
- Column temperature: 25 $^{\circ}\text{C}$
- Mobile phase: acetonitrile-40 mmol/L potassium dihydrogen phosphate (6:94)
- Detector wavelength: 260 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Adenosine	2.619	9.048	16.74	252.5	8533	1.05

Baokening Granules (*Baokening Keli*) – 宝咳宁颗粒

Sample source

Commercially available Baokening Keli

Chemical reference substances

Baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110715-200212)

Preparation of test solution

Accurately weigh 0.5 g of the granules in a stoppered conical flask, grind to a powder, accurately add 50 mL of dilute ethanol, weigh, heat under reflux for 1 hour, allow to cool to room temperature, weigh again and replenish the lost weight with dilute ethanol. Mix thoroughly, allow to stand, filter the supernatant liquid, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water-phosphoric acid (41:59:0.2)
- Detector wavelength: 278 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector
- System control through Agilent ChemStation revision B.01.01

Baicalin	9.514	15.771	11.76	343.3	7010	0.96

Baohe Pills (*Baohe Wan*) – 保和丸

Sample source

Commercially available Baohe Wan

Chemical reference substances

Hesperidin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110721-200211)

Preparation of test solution

Cut the pills into pieces, take about 5 g, accurately weigh, add a quantity of kieselguhr, grind well, transfer to a Soxhlet extractor, add 80 mL of petroleum ether (60-90 °C), heat under reflux for 2.5 hours. Discard the petroleum ether extract and evaporate the residue to dryness, add 80 mL of methanol, heat under reflux until the extract solution is colorless, allow to cool and filter. Transfer the filtrate to a 100 volumetric flask, wash the container with a small quantity of methanol several times, filter the washings into the same flask, dilute with methanol to volume, and mix well. Accurately transfer 5 mL to a 10 mL volumetric flask, dilute with mobile phase to volume. Mix well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-6.8 % glacial acetic acid (32:68)
- Detector wavelength: 283 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r
Hesperidin	4.945	7.134	53.41	742.4	6183	1.03

Baohe Watered Pills (*Baohe Wan (Shuiwan)*) – 保和丸（水丸）

Sample source

Commercially available Baohe Watered Pills

Chemical reference substances

Hesperidin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0721-200211)

Preparation of test solution

Grind a quantity of the pills to a fine powder and mix well. Accurately weigh about 2 g of the powder in a Soxhlet extractor, add 80 mL of petroleum ether (60-90 °C), heat under reflux for 2-3 hours. Discard the petroleum ether extract and evaporate the residue to dryness, add 80 mL of methanol, heat under reflux until the extract solution is colorless, allow to cool and filter. Transfer the filtrate to a 100 mL of a volumetric flask, wash the container with a small quantity of methanol several times, filter the washings into the same flask, dilute with methanol to volume and mix well. Accurately transfer 5 mL to a 10 mL volumetric flask, dilute with mobile phase to volume. Mix well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 40 °C
- Mobile phase: methanol-glacial acetic acid-water (38:6:56)
- Detector wavelength: 283 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Baoji Pills (*Baoji Wan*) – 保济丸

Sample source

Commercially available Baoji Wan

Chemical reference substances

1. Magnolol, 2. Honokiol (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1.0729-200006, 2.0730-9204)

Preparation of test solution

Accurately weigh 1.0 g of the fine powder in a stoppered conical flask, add 100 mL of petroleum ether (30-60 °C) and treat ultrasonically for 30 minutes, and filter. Treat the residue ultrasonically again with 50 mL of petroleum ether (30-60 °C) for 30 minutes and filter. Combine the filtrates, evaporate to dryness, dissolve the residue in methanol, transfer to a 10 mL volumetric flask, dilute to volume with methanol, shake well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18, 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-glacial acetic acid-water (60:4:40)
- Detector wavelength: 294 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r
Honokiol	1.910	7.274	35.87	293.9	18660	1.02
Magnolol	3.059	10.148	31.71	351.9	20001	0.95

Biyan Tablets (*Biyan Pian*) – 鼻炎片

Sample source

Commercially available Biyan Tablets

Chemical reference substances

Magnolin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110882-200203)

Preparation of test solution

Accurately weigh 10 tablets, remove the coating, grind to a fine powder. accurately weigh 0.4 g, in a stoppered conical flask, accurately add 10 mL of methanol, stopper tightly and weigh. Treat ultrasonically for 30 minutes, allow to cool, weigh again and replenish the lost weight with methanol, mix well and filter. Accurately measure 5 mL of the successive filtrate and apply to a neutral alumina column (100-200 mesh, 10 mm in internal diameter, packed with 2 g of neutral alumina by methanol, washed previously with methanol) and elute with a quantity of methanol, collect eluent in a 10 mL volumetric flask until almost to the volume, dilute with methanol to volume and mix well. Filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: acetonitrile-water (38:62)
- Detector wavelength: 278 nm
- Flow rate: 1.0 mL/min
- Injection volume: 15 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Biyuanshu Mixture (*Biyuanshu Koufuye*) – 鼻渊舒口服液

Sample source

Commercially available Biyuanshu Mixture

Chemical reference substances

Geniposide (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110749-200309)

Preparation of test solution

Accurately measure 0.1 mL of the mixture in a 10 mL volumetric flask, dilute with 50 % methanol to volume and shake thoroughly, filter through a millipore membrane (0.45 μm), filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6 \times 150 mm, 5 μm (883975-902)
- Column temperature: 35 $^{\circ}\text{C}$
- Mobile phase: methanol-0.2 %phosphoric acid solution (30:70)
- Detector wavelength: 238 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Malaytea Scurfpea Fruit (*Fructus Psoraleae*) – 补骨脂

Sample source

Commercially available Malaytea Scurfpea Fruit

Chemical reference substances

1. Psoralen, 2.Isopsoralen (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1. 110739-200309 2. 110738-200309)

Preparation of test solution

Accurately weigh 0.05 g of the fine powder in a Soxhlet extractor (No. 3 sieve), add a quantity of methanol and heat under reflux for 2 hours, allow cool and transfer to a 10 mL volumetric flask, dilute with methanol to volume and mix well. Filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-water (55:45)
- Detector wavelength: 246 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Bushen Yiniao Tablets (*Bushen Yiniao Pian*) – 补肾益脑片

Sample source

Commercially available Bushen Yiniao Tablets

Chemical reference substances

1. Psoralen, 2. Isopsoralen (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1. 110739-200309, 2. 110738-200309)

Preparation of test solution

Accurately weigh 20 tablets, remove the coating, grind well. Accurately weigh 0.3 g in a 5 mL volumetric flask. Accurately add 5 mL of methanol, weigh, treat ultrasonically for 30 minutes, cool, weigh again, replenish the lost the weight with methanol, mix well and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-water (42:58)
- Detector wavelength: 245 nm
- Flow rate: 1.0 mL/min
- Injection volume: 2 µL

Chromatographic system

Buzhong Yiqi Watered Pills (*Buzhong Yiqi Wan (Shui Wan)*)

补中益气丸，水丸

Sample source

Commercially available Buzhong Yiqi Watered Pills

Chemical reference substances

Astragaloside IV (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0781-9807)

Preparation of test solution

Grind a quantity of the pills to a fine powder and mix well. Accurately weigh about 4 g of the powder in a Soxhlet extractor, add a quantity of methanol, heat under reflux for 7 hours. Evaporate the extracts to dryness, and dissolve residue in 25 mL of warm water, wash with two 20 mL quantities of ether, extract the water layer with six 20 mL quantities of n-butanol saturated with water. Combine the n-butanol extracts, wash with three 40 mL quantities of ammonia. Evaporate the n-butanol extracts to dryness, and dissolve residue in methanol, and transfer to 10 mL volumetric flask, dilute with methanol to volume. Mix well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18 4.6×250 mm, 5 µm (990967-902)
- Column temperature: 35 °C
- Mobile phase: acetonitrile-water (35:65)
- Evaporator tube temperature: 65°C
- Air flow rate: 2.0 mL/min
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series binary pump
- Agilent 1200 Series manual injector
- Agilent 1200 Series thermostated column compartment
- Agilent 35900 A/D converter
- ELSD Alltech 2000

Chenxiang Huaqi Pills (*Chenxiang Huaqi Wan*) – 沉香化气丸

Sample source

Commercially available Chenxiang Huaqi Pills

Chemical reference substances

Hesperidin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110721-200211)

Preparation of test solution

Grind a quantity of the pills to a fine powder and mix well. Accurately weigh 0.5 g of the powder in a Soxhlet extractor, add a quantity of methanol, heat under reflux for 3 hours. Transfer the extracts to a 50 mL volumetric flask, wash the container with a quantity of methanol several times, combine the washings with the extracts in the same flask, dilute with methanol to volume, and mix well. Filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-0.1 % phosphoric acid (28:72)
- Detector wavelength: 283 nm
- Flow rate: 0.8 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Chitong Xiaoyanling Granules (*Chitong Xiaoyanling Keli*)

齿痛消炎灵颗粒

Sample source

Commercially available Chitong Xiaoyanling Granules

Chemical reference substances

Hesperidin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0721-200211)

Preparation of test solution

Grind a quantity of the granules to a fine powder and mix well. Accurately weigh 2 g of the fine powder in a conical flask. Add accurately 25 mL of methanol, weigh, treat ultrasonically for 1 hour, allow to cool, weigh again, replenish the lost weight with methanol, mix well and filter. Use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18, 4.6×150 mm, 5 µm (993967-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water (33:67)
- Detector wavelength: 283 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Nippon Yam Rhizome (*Rhizoma Dioscoreae Nipponicae*) – 穿山龙

Sample source

Commercially available Nippon Yam Rhizome

Chemical reference substances

Diosgenin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 111539-200201)

Preparation of test solution

Accurately weigh 1 g of the powder in a conical flask, add 50 mL of methanol, treat ultrasonically for 30 minutes, filter, and rinse the residue with 20 mL of methanol. Combine the methanol solutions and evaporate to dryness. Dissolve the residue in successive quantities of 10 mL, 5 mL and 5 mL of 3 mol/L hydrochloric acid solution, successively transfer to a conical flask, heat to hydrolyze on a water bath for 30 minutes, allow to cool, add 30 mL of chloroform, heat under reflux for 15 minutes, repeat the extraction with chloroform in the same manner. Filter, wash the container and residue with 30 mL of chloroform, evaporate the combined extracts to dryness, dissolve the residue in methanol, and transfer to a 25 mL volumetric flask, dilute to volume with methanol, and mix well.

Chromatographic conditions

- Column: ZORBAX XDB C18 4.6×250 mm, 5 µm (990967-902)
- Column temperature: 30 °C

Chuanxing Chantiao Pills (*Chuanxing Chantiao Wan*)

川芎茶调丸

Sample source

Commercially available Chuanxing Chantiao pills

Chemical reference substances

Ferulic acid (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110773-9910)

Preparation of test solution

Grind a quantity of the pills to a fine powder and mix well. Accurately weigh 0.5 g of the powder, accurately add 20 mL of a mixture of 45 % ethanol and glacial acetic acid (20:1), weigh, heat under reflux for 1 hour, allow to cool, and weigh again. Replenish the lost weight with the above solution, mix thoroughly, centrifuge, and use the supernatant liquid as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18, 4.6×150 mm, 5 µm (993967-902)
- Column temperature: 35 °C

Rhubarb (*Radix et Rhizoma Rhei*) – 大黃

Sample source

Commercially available Rhubarb

Chemical reference substances

1. Emodin, 2. Chrysophanol, 3. Rhein, 4. Aloe-emodin, 5. Physcion (National Institute for the Control of Pharmaceutical and Biological Products)

Preparation of test solution

Accurately weigh 0.15 g of the powder in a stoppered conical flask, accurately add 25 mL of methanol and weigh. Heat under reflux on a water bath for 1 hour, cool, weigh again, replenish the lost solvent with methanol, mix well and filter. Accurately measure 5 mL of successive filtrate in a flask, discard the solvent, add 10 mL of 8 % solution of hydrochloric acid, treat ultrasonically for 2 minutes, and add 10 mL of chloroform. Heat under reflux for 1 hour, allow to cool, transfer to a separating funnel, wash the flask with a small quantity of chloroform and combine the washings in the separating funnel. Separate the chloroform layer, extract the acid solution again with three 10 mL quantities of chloroform, combine the chloroform extracts and evaporate the chloroform in vacuum to dryness. Dissolve the residue in methanol and transfer to a 10 mL volumetric flask, dilute with methanol to volume and mix well. Filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.6 % phosphoric acid (75:25)
- Detector wavelength: 254 nm
- Flow rate: 1.0 mL/min

Chromatographic system

Rhubarb Liquid Extract (*Extractum Rhei Liquidom*) – 大黄流浸膏

Sample source

Commercially available Radix et Rhizoma Rhei

Chemical reference substances

1. Emodin, 2. Chrysophanol
(National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1. 0796-200309, 2. Chrysophanol)

Preparation of test solution

Soak 500 g of the coarse powder in 60 % ethanol for 24 hours and slowly percolate at about 1-3 mL per minute. Reserve 425 mL of the initial percolate and continue to percolate until the percolate becomes pale in color. Concentrate the successive percolate to a thick extract, mix well with the initial percolate and dilute with 60 % ethanol to give a volume of 500 mL. Allow to stand until the fluid becomes clear and filter.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)

Dahuang Zhechong Pills (*Dahuang Zhechong Wan*) – 大黃蟪虫丸

Sample source

Commercially available Dahuang Zhechong Pills

Chemical reference substances

Emodin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0756-200210)

Preparation of test solution

Cut a quantity of pills into pieces and mix well, take a quantity of the pieces, accurately weigh, grind well with an equal quantity of kieselguhr and mix well. Accurately weigh 4 g of the powder in a stoppered conical flask, accurately add 25 mL of methanol, weigh, heat under reflux on a water bath for 1 hour, and allow to cool, weigh again and replenish the lost weight with methanol, mix well, and filter. Accurately measure 5 mL of the successive filtrate in a conical flask, discard the solvent, add 20 mL of 2.5 mol/L sulfuric acid solution, treat ultrasonically for 10 minutes, and heat under reflux for 1 hour, and cool immediately, transfer to a separator. Extract with three 25-mL quantities of ether, combine the ether extracts, wash with 15 mL of water, combine the ether extracts, wash with 15 mL of water, discard the washings, and pass through a funnel packed with anhydrous sodium sulfate. Wash the filter and the container with a little quantity of ether, combine the washings with the filtrate, evaporate to dryness at a low temperature. Dissolve the residue with a quantity of methanol in a 25 mL volumetric flask, dilute with methanol to volume, and mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water-phosphoric acid (85:15:0.05)
- Detector wavelength: 289 nm
- Flow rate: 1.0 mL/min

Dyers Woad Leaf (*Folium Isatidis*) – 大青叶

Sample source

Commercially available Dyers Woad Leaf

Chemical reference substances

Indirubin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 717-200204)

Preparation of test solution

Accurately weigh 0.25 g of the fine powder in a Soxhlet extractor, add an appropriate quantity of chloroform to extract for 15 hours, heat under reflux until the extract is colorless. Evaporate the solvent to dryness, dissolve the residue in methanol and transfer to a 100 mL volumetric flask, add methanol to volume, mix well, filter, and use the filtrate as test solution.

Chromatographic conditions

- Column: ZORBAX Extend C18, 4.6×250 mm, 5 µm (770450-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water (72:28)
- Detector wavelength: 289 nm
- Flow rate: 1.0 mL/min
- Injection volume: 20 µL

Chromatographic system

Danshen Root (*Radix et Rhizoma Salviae Miltiorrhizae*) – 丹参

Sample source

Commercially available Danshen Root

Chemical reference substances

Tanshinone IIA (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0766-200010)

Preparation of test solution

Accurately weigh 0.3 g of the powder in a stoppered conical flask. Accurately add 50 mL of methanol and weigh. Heat under reflux for 1 hour, allow to cool and weigh again, replenish the lost solvent with methanol, mix well and filter. Use the successive filtrate as test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water (75:25)
- Detector wavelength: 270 nm

Danle Capsules (*Danle Jiaonang*) – 胆乐胶囊

Sample source

Commercially available Danle Capsules

Chemical reference substances

hesperidin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110721-200211)

Preparation of test solution

Grind a quantity of the capsule contents to a fine powder and mix well. Accurately weigh 0.3 g of the powder in a Soxhlet extractor, add a quantity of methanol, heat under reflux on a water bath for 6 hours. Transfer the extract to a 100 mL volumetric flask, dilute with methanol to volume and mix well. Filter through a millipore membrane (0.45 μm), and use the filtrate as test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6 \times 250 mm, 5 μm (880975-902)
- Column temperature: 25 $^{\circ}\text{C}$
- Mobile phase: acetonitrile-0.2 % phosphoric acid (20:80)
- Detector wavelength: 284 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Danning Tablets (*Danning Pian*) – 胆宁片

Sample source

Commercially available Danning Tablets

Chemical reference substances

1. Emodin, 2. Chrysophanol
(National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1. 110756-200210, 2. 110796-200309)

Preparation of test solution

Remove the coating of 10 tablets, grind to a fine powder, accurately weigh 0.35 g of the powder and place in a round-bottomed flask. Add 10 mL 30% solution of sulfuric acid, and heat under reflux with successive 30 mL, 20 mL, 20 mL of chloroform for 2 hours, 30 minutes and 30 minutes respectively. Combine the chloroform solution and wash with a quantity of water, transfer the chloroform solution to a 100 mL volumetric flask, dilute with chloroform to volume, mix thoroughly. Accurately measure 3 mL of the chloroform solution in a 10 mL volumetric flask, evaporate to dryness, dissolve the residue in about 9 mL of methanol, treat ultrasonically for 3 minutes, dilute with methanol to volume, mix thoroughly and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX Eclipse Plus C18, 4.6×250mm, 5µm (959990-902)
- Column temperature: 30 °C
- Mobile phase: methanol-0.1 % phosphoric acid (80:20)
- Detector wavelength: 254 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Chinese Angelica (*Radix Angelicae Sinensis*) – 当 归

Sample source

Commercially available Chinese Angelica

Chemical reference substances

Ferulic acid (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110773-9910)

Preparation of test solution

Accurately weigh 0.2 g of the powder in a stoppered conical flask. Accurately add 20 mL of 70 % methanol and weigh. Heat under reflux for 30 minutes, cool, weigh again, replenish the lost weight with 70 % methanol, mix well and allow to stand. Filter the supernatant through a millipore membrane (0.45 µm), use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 35 °C
- Mobile phase: acetonitrile-0.085 % phosphoric acid (17:83)
- Detector wavelength: 316 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Shortscape Fleabane Herb (*Herba Lysimachiae*) – 灯盏细辛

Sample source

Commercially available Shortscape Fleabane Herb (Yunnan province)

Chemical reference substances

Scutellarin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 842-200102)

Preparation of test solution

Accurately weigh 0.5 g of the powder in a Soxhlet extractor, add an appropriate quantity of chloroform, heat under reflux until the extract is colorless and discard the chloroform extract. Evaporate the solvent, transfer the residue and the filter to a stoppered conical flask, accurately add 50 mL of methanol, weigh, allow to stand for 1 hour, heat under reflux on a water bath for 1 hour, allow to cool, weigh again, and replenish the lost weight with methanol, mix well, filter. Accurately measure 25 mL of the successive filtrate, evaporate to dryness, dissolve the residue in methanol and transfer to a 10 mL volumetric flask, dilute with methanol to volume, mix well. Filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.1 % phosphoric acid (35:65)
- Detector wavelength: 335 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Dengzhan Xixin Injection (*Injection Herba Erigerontis*)

灯盏细辛注射液

Sample source

Commercially available Dengzhan Xixin Injection Fluid

Chemical reference substances

Scutellarin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 842-200102)

Preparation of test solution

Accurately measure 2 mL of the injection fluid in a 10 mL volumetric flask, dilute with water to volume, mix well and filter. Use the filtrate as the test solution.

Chromatographic conditions

- Column: Agilent TC-C18, 4.6×250 mm, 5 µm (518925-902)
- Column temperature: 25 °C
- Mobile phase: methanol-tetrahydrofuran-0.1 % phosphoric acid (15:13:74)
- Detector wavelength: 335 nm
- Flow rate: 1.0 mL/min

Chromatographic system

Rehmannia Root (*Radix Rehmanniae*) – 地 黄

Sample source

Commercially available Rehmannia Root

Chemical reference substances

Catalpol (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110808-200304)

Preparation of test solution

Accurately weigh 2.0 g of the powder in a round-bottom flask, accurately add 100 mL of methanol. Heat under reflux for 1.5 hours, allow to cool, filter. Collect filtrate in a 100 mL volumetric flask, wash several times with 15 mL of methanol, combine the washings in the volumetric flask, add methanol to the volume and mix well. Accurately measure 20 mL of the filtrate and evaporate to almost dryness. Dissolve the residue in the mobile phase, transfer to a 10 mL volumetric flask, dilute to volume with the same solvent and mix well.

Chromatographic conditions

- Column: Agilent TC-C18, 4.6×150 mm, 5 µm (518935-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-0.15% phosphoric acid (1:99)
- Detector wavelength: 210 nm ±8nm
- Reference wavelength: 360 nm ±50 nm

Chromatographic system

Creeping Euphorbia (*Herba Euphorbiae Humifusae*) – 地锦草

Sample source

Commercially available Creeping Euphorbia

Chemical reference substances

Quercetin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0081-9905)

Preparation of test solution

Accurately weigh 1.5 g of the powder in a stoppered conical flask. Accurately add 50 mL of 80 % methanol and weigh. Heat under reflux for 1.5 hours, cool, weigh again, replenish the lost weight with 80 % methanol, mix well and filter. Accurately measure 20 mL of the filtrate and accurately add 7 mL of 25 % hydrochloric acid to the filtrate. Heat on a water bath at 85 °C for 30 minutes and cool immediately. Transfer to a 50 mL volumetric flask, dilute with methanol to volume and mix well, filter, and use the successive filtrate as test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 30 °C
- Mobile phase: methanol-0.4 % phosphoric acid (50:50)
- Detector wavelength: 360 nm
- Flow rate: 1.0 mL/min

Chromatographic system

Dieda Pills (*Dieda Wan*) – 跌打丸

Sample source

Commercially available Dieda Pills

Chemical reference substances

Dracorhodin perchlorate (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110811-200203)

Preparation of test solution

Cut a quantity of the pills into pieces and mix well, accurately weigh 0.4 g of the pieces, accurately add 5 mL of 3 % solution of phosphoric acid in methanol, weigh, heat under reflux for 30 minutes, allow to cool, weigh again and replenish the lost weight with a 3 % solution of phosphoric acid in methanol, mix well, centrifuge, filter the supernatant through a millipore membrane (0.45 μm), use the filtrate as test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6 \times 150 mm, 5 μm (883975-902)
- Column temperature: 35 $^{\circ}\text{C}$
- Mobile phase: acetonitrile-0.05mol/L sodium dihydrogen phosphate (40:60)
- Detector wavelength: 440 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Obtuseleaf Erycibe Stem (*Caulis Erycibes*) – 丁公藤

Sample source

Commercially available Obtuseleaf Erycibe Stem

Chemical reference substances

scopoletin (National Institute for the Control of Pharmaceutical and Biological Products)

Preparation of test solution

Accurately weigh 1 g of the powder in a stoppered conical flask. Accurately add 50 mL of 70% ethanol, weigh, heat on a water bath for 6 hours, allow to cool, weigh again, replenish the lost weight with 70% ethanol, mix well and filter. Accurately measure 25 mL of the filtrate to a flask, evaporate to about 1 mL, and add 10 mL of 3 mol/L hydrochloric acid, heat on a water bath for 2 hours, cool immediately. Transfer to a separating funnel, wash the flask several times with 10 mL of water, combine the washings in the separating funnel, add 2 g of sodium chloride, extract with five 15 mL quantities of chloroform, combine the chloroform extracts, add 2 g of anhydrous sodium sulfate, stir well and filter, wash the separating funnel with a small quantity of chloroform, filter, combine the filtrates and evaporate to almost dryness below 70 °C, immediately dissolve the residue in methanol, transfer to a 10 mL volumetric flask, dilute to volume and mix well.

Chromatographic conditions

- Column: Agilent TC-C18, 4.6×250 mm, 5 µm (518925-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water-glacial acetic acid (30:70:0.14)
- Detector wavelength: 298 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Dingkun Pills (*Dingkun Dan*) – 定坤丹

Sample source

Commercially available Dingkun Pills

Chemical reference substances

Ginsenoside Rg1 (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110703-200322)

Preparation of test solution

Cut a quantity of the pills into pieces and mix well, accurately weigh 2 g of the pills, add 2 g of kieselguhr, stir well. Place in a Soxhlet extractor, add 100 mL of methanol, heat under reflux until the extract becomes almost colorless, and evaporate to dryness. Dissolve the residue in 30 mL of water, extract with three 20-mL quantity of chloroform, discard the chloroform extract, extract with four 30 mL quantities of n-butanol saturated with water, combine the n-butanol extracts, wash with three 30 mL quantities of 1 % sodium hydroxide solution, and wash with water saturated with n-butanol to neutral. Evaporate the n-butanol to dryness, dissolve the residue with methanol in a 10 mL volumetric flask, dilute with methanol to volume, and mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-0.05 % phosphoric acid (21:79)
- Detector wavelength: 203 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Pubescent Angelica Root (*Radix Angelicae Pubescentis*) – 独活

Sample source

Commercially available Double-teeth Pubescent Angelica Root (Sichuan province)

Chemical reference substances

Osthole (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110822-200305)

Preparation of test solution

Accurately weigh 0.06 g of the powder in a 10 mL volumetric flask, accurately add 10 mL of methanol, and weigh. Treat ultrasonically for 30 minutes, allow to cool and weigh again, replenish the lost solvent with methanol and mix well. Filter through millipore membrane (0.45 µm), use the filtrate as test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: acetonitrile-water (60:40)
- Detector wavelength: 322 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Duyiwei Capsules (*Capsule Radix Lamio-phlomidies Ratatae*)

独一味胶囊

Sample source

Commercially available Duyiwei Capsules

Chemical reference substances

luteolin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 111520-200201)

Preparation of test solution

Accurately weigh 0.06 g of the powder contents in a 10 mL volumetric flask, add 20 mL of 2.5 mol/L solution of hydrochloric acid in methanol, treat ultrasonically for 30 minutes, allow to cool. Dilute with a 2.5 mol/L solution of hydrochloric acid in methanol to volume, mix well and filter. Accurately transfer 4 mL of the filtrate to a 10 mL round-bottomed flask, heat on a water bath at 90 °C for 30 minutes and allow to cool. Transfer to a 10 mL volumetric flask, dilute with methanol to volume, mix well, filter, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-0.4 % phosphoric acid solution (50:50)
- Detector wavelength: 350 nm
- Flow rate: 1.0 mL/min

Chromatographic system

Luteolin	4.959	7.151	16.74	195.6	8946	1.00

Chinese Clinopodium Granules (*Granules Clinopodii*)

断血流颗粒

Sample source

Commercially available Chinese Clinopodium Granules

Chemical reference substances

Buddlejasaponin IVb (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110782-200301)

Preparation of test solution

Grind the granules to a fine powder. Accurately weigh 0.5 g of the powder, add 30 mL of methanol, treat ultrasonically for 15 minutes and filter. Add 30 mL of methanol to the residue, treat ultrasonically for 15 minutes and filter. Combine the filtrates, evaporate to dryness, dissolve the residue in 30 mL of water, transfer to a separator funnel, extract with four 20 mL quantities of n-butanol saturated with water. Combine the n-butanol extract and wash with 30 mL of ammonia saturated with n-butanol and wash successively with two 30 mL quantities of water saturated with n-butanol. Separate the n-butanol extract, evaporate to dryness, dissolve the residue in methanol, and transfer to a 50 mL volumetric flask. Dilute with methanol to volume, mix well and filter. Use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water (78:22)
- Detector wavelength: 250 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Chinese Clinopodium Tablets (*Tabellae Clinopodii*) – 断血流片

Sample source

Commercially available Chinese Clinopodium Tablets

Chemical reference substances

buddlejasaponin IVb (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110782-200301)

Preparation of test solution

Remove the coating of 20 tablets and grind to a fine powder. Accurately weigh 0.3 g of the powder in a stoppered conical flask, accurately add 20 mL of methanol, treat ultrasonically for 15 minutes and filter. Accurately add 20 mL of methanol, and treat ultrasonically for 15 minutes again, filter. Combine the filtrates, evaporate to dryness, dissolve the residue in 30 mL of water, and transfer to a separating funnel, extract with four 20 mL quantities of n-butanol saturated with water, combine the n-butanol extracts, wash with 30 mL of ammonia saturated with n-butanol, wash with two 30 mL quantities of water saturated with n-butanol, Evaporate n-butanol solution to dryness, dissolve the residue in methanol, and transfer to a 100 mL volumetric flask, add methanol to volume, mix well and filter. Use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water (77:23)
- Detector wavelength: 250 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector
- System control through Agilent ChemStation revision B.01.01

Erchen Pills (*Erchen Wan*) – 二陈丸

Sample source

Commercially available Erchen Pills

Chemical reference substances

hesperidin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0721-200211)

Preparation of test solution

Grind a quantity of the pills to a powder, accurately weigh 0.5 g of the powder. Place in a Soxhlet extractor, add a quantity of petroleum ether (60-90 °C), heat under reflux for 2 hours, discard the petroleum ether, evaporate the residue to dryness, add a quantity of methanol, heat under reflux until the extract becomes almost colorless (about 7 hours), allow to cool. Transfer the methanol extract to a 50 mL volumetric flask, wash the container with small quantities of methanol in portions, combine the washings in the same volumetric flask, dilute to volume and shake well. Accurately measure 3 mL in a 10 mL volumetric flask, dilute to volume with methanol, mix well for use.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 40 °C
- Mobile phase: methanol-1 % glacial acetic acid (39:61)
- Detector wavelength: 283 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Erkangning Syrup (*Erkangning Tangjiang*) – 儿康宁糖浆

Sample source

Commercially available Erkangning Syrup

Chemical reference substances

2,3,5,4'-tetrahydroxystilbene-2-O- β -D-glucoside (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0844-200003)

Preparation of test solution

Accurately measure 2 ml, in a 10 ml amber volumetric flask, dilute to volume with dilute ethanol, mix well, centrifuge, filter the supernatant through a millipore film (0.45 μ m) and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6 \times 150 mm, 5 μ m (883975-902)
- Column temperature: 35 $^{\circ}$ C
- Mobile phase: acetonitrile-water (24:76)
- Detector wavelength: 320 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 μ L

Chromatographic system

Ertong Qingfei Pills (*Ertong Qingfei Wan*) – 儿童清肺丸

Sample source

Commercially available Ertong Qingfei Pills

Chemical reference substances

baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110715-200212)

Preparation of test solution

Cut a quantity of the pills into pieces, accurately weigh 1 g of the pieces, grind well with 0.5 g of kieselguhr and mix well. Put in a conical flask, add 40 ml of 70 % ethanol, heat under reflux on a water bath for 2 hours, allow to cool, filter, transfer the filtrate to a 100 ml volumetric flask, wash the container and residue with a small quantity of 70 % ethanol in portions, combine the washings in the same volumetric flask, dilute with 70 % ethanol to volume and shake well. Filter through a millipore membrane (0.45 μm), use the filtrate as test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 μm (880975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.36 % phosphoric acid (46:54)
- Detector wavelength: 280 nm

Curcuma Oils (*Oleum Curcumae*) – 莪术油

Sample source

Commercially available Curcuma Oils

Chemical reference substances

Germacrone (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 111665-200401)

Preparation of test solution

Accurately weigh 0.1 g of the oil in a 50 ml volumetric flask, add ethanol to volume and shake well. Accurately measure 2 ml into a 25 ml volumetric flask, add the mobile phase to volume, shake well, filter, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB CN 4.6×250,5µm (990967-905)
- Column temperature: 50 °C
- Mobile phase: acetonitrile-water (30:70)

Fourstamen Stephania Root (*Radix Stephaniae Tetrandrae*) – 防己

Sample source

Commercially available Fourstamen Stephania Root

Chemical reference substances

1. Fanchinoline, 2. Tetrandrine
(National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1. 110793-200003, 2. 110711-200205)

Preparation of test solution

Accurately weigh 0.5 g of the powder, accurately add 25 ml of a 2 % solution of hydrochloric acid in methanol, and weigh. Heat under reflux for 30 minutes, allow to cool and weigh again, replenish the lost weight with a 2 % solution of hydrochloric acid in methanol and filter. Accurately measure 5 ml of the filtrate in a 10 ml volumetric flask, dilute with the mobile phase to volume and mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 30 °C
- Mobile phase: acetonitrile-methanol-1 % sodium dodecylsulfonate (1 % glacial acetic acid) (49:23:28)
- Detector wavelength: 280 nm

Thomson Kudzuvine Root (*Radix Puerariae Thomsonii*) – 粉葛

Sample source

Commercially available Thomson Kudzuvine Root

Chemical reference substances

Puerarin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110752-200209)

Preparation of test solution

Accurately weight 0.8 g of the powder in a conical flask, accurately add 50 ml of 30 % ethanol and weigh. Heat under reflux on a water bath for 30 minutes, allow to cool, and weigh again, replenish the lost solvent with 30 % ethanol and mix well. Filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C

Fenghan Kesou Granules (*Fenghan Kesou Keli*) – 风寒咳嗽颗粒

Sample source

Commercially available Fenghan Kesou Granules

Chemical reference substances

Ephedrine hydrochloride (National Institute for the Control of Pharmaceutical and Biological Products)

Preparation of test solution

Grind a quantity of granules to a fine powder, accurately weigh 3 g of the powder in a round-bottom flask, add 120 mL of a 5 mol/L solution of sodium hydroxide, stir well, add 7.5 g of sodium chloride, treat ultrasonically for 30 minutes. Add 50 mL of water and distill, collect about 95 mL of the distillate in a 100 mL volumetric flask containing 5 mL of 0.5 mol/L hydrochloric acid, add water to volume, shake well, accurately measure 10 mL of the solution into a 25 mL volumetric flask. Add 1 mL of periodic acid solution (0.25 g/10 mL) and 2.5 mL of 0.25 mol/L sodium hydroxide, and mix well. Allow to stand for 30 minutes, add 0.5 mol/L solution of hydrochloric acid to adjust to pH 7, then add methanol to volume, mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water (64:36)
- Detector wavelength: 254 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Fubao Granules (*Fubao Keli*) – 妇宝颗粒

Sample source

Commercially available Fubao Granules

Chemical reference substances

Paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110736-200220)

Preparation of test solution

Grind a quantity of the granules to a fine powder, accurately weigh 1 g of the powder in a stoppered conical flask. Accurately add 20 mL of 50 % methanol, shake to dissolve, allow to stand overnight, shake well. Filter through a millipore membrane (0.45 µm), use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-0.01mol/L phosphoric acid (11:89)
- Detector wavelength: 230 nm
- Flow rate: 1.0 mL/min

Chromatographic system

Compound Danshen Dripping Pills (*Fufang Danshen Diwan*)

复方丹参滴丸

Sample source

Commercially available Compound Danshen Dripping Pills

Chemical reference substances

Sodium tanshinol (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 855-200102)

Preparation of test solution

Accurately weigh 12 pills in a 25 mL volumetric flask. Break the coatings of the coated-film pills with a mortar, wash the mortar with a quantity of methanol, combine the washings in the same volumetric flask), add methanol to a volume of about 15 mL. Treat ultrasonically for 10 minutes, allow to reach room temperature. Dilute with methanol to volume, mix well, centrifuge for 5 minutes and use the supernatant as the test solution.

Chromatographic conditions

- Column: ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)

Glycyrrhizinic acid	2.172	7.930	67.42	1149.4	5072	1.01

Liquorice Extract (*Extractum Glycyrrhizae*) – 甘草浸膏

Sample source

Commercially available prepared slices of *Radix Glycyrrhizae*

Chemical reference substances

Ammonium glycyrrhizinate (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0731-9704)

Preparation of test solution

Add 4500 ml of water to 0.45 Kg prepared slices, decoct 3 times, 2 hours for each time. Combine the decoctions, stand overnight to deposit any precipitate and concentrate the supernatant to a thick extract. Accurately weigh 0.25 g in a 50 mL volumetric flask, add 45 mL of the mobile phase, treat ultrasonically for 30 minutes, allow to cool, add the mobile phase to volume, shake well and filter. Accurately measure 10 mL of the filtrate in a 25 mL volumetric flask, add the mobile phase to volume and shake well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C

Ganmao Qingre Granules (*Ganmao Qingre Keli*) – 感冒清热颗粒

Sample source

Commercially available Ganmao Qingre Granules

Chemical reference substances

Puerarin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110752-200209)

Preparation of test solution

Grind a quantity of the granules to a fine powder, accurately weigh 0.8 g of the powder in a stoppered conical flask, accurately add 50 mL of 30 % ethanol, stopper tightly and weigh. Treat ultrasonically for 20 minutes, allow to reach room temperature, weigh again, replenish the lost weight with 30 % ethanol, shake thoroughly and filter through a millipore membrane (0.45 μm), and use the filtrate as the test sample.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 μm (880975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-water (11:89)
- Detector wavelength: 250 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 μL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Ganmao Tuire Granules (*Ganmao Tuire Keli*) – 感冒退热颗粒

Sample source

Commercially available Ganmao Tuire Granules

Chemical reference substances

Forsythin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110821-200305)

Preparation of test solution

Accurately weigh 1.25 g of the granules without sucrose and grind to a fine power. Heat under reflux with two 25-mL quantities of methanol for 30 minutes, filter. Wash the filter funnel and the residue with 15 mL of methanol in portions, combine the washings and the filtrates, and evaporate to dryness. Dissolve the residue in 10 mL of 50 % ethanol, apply to a column (1 cm in diameter) packed with neutral alumina (100-200 mesh, 3 g), elute with 70 mL of 50 % ethanol, and collect the eluents. Evaporate to dryness and dissolve the residue in 50 % methanol, transfer to a 25 mL volumetric flask and dilute with 50 % ethanol to volume, mix well, filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 μ m (883975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-water (21:79)
- Detector wavelength: 277 nm
- Flow rate: 1.0 mL/min

Chromatographic system

Gegen Qinlian Pills (*Gegen Qinlian Wan*) – 葛根芩连丸

Sample source

Commercially available Gegen Qinlian Pills

Chemical reference substances

Puerarin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110752-200209)

Preparation of test solution

Grind a quantity of the pills to a fine powder and mix well, accurately weigh 0.3 g of the powder in a stoppered conical flask, accurately add 50 mL of methanol, tightly stopper and weigh. Heat under reflux for 1 hour, allow to cool and weigh again, replenish the lost weight with methanol, shake thoroughly and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18 4.6×150 mm, 5 µm (993967-902)
- Column temperature: 30 °C
- Mobile phase: acetonitrile-methanol-water (10:8:82)
- Detector wavelength: 250 nm
- Flow rate: 1.0 mL/min

Chromatographic system

Gejie Dingchuan Pills (*Gejie Dingchuan Wan*) – 蛤蚧定喘丸

Sample source

Commercially available Gejie Dingchuan Pills

Chemical reference substances

Baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110715-200212)

Preparation of test solution

Grind a quantity of the pills to a fine power, accurately weigh 0.5 g of the powder in a 100 mL stoppered conical flask, accurately add 50 mL of 70 % ethanol, and weigh. Allow to soak warmly for 1 hour, heat under reflux for 30 minutes, allow to cool and weigh again, replenish the lost weight with 70 % ethanol, shake thoroughly and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-3.6 % phosphoric acid (45:55)
- Detector wavelength: 276 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Chinese Mahonia Stem (*Caulis Mahoniae*) – 功劳木

Sample source

Commercially available Chinese Mahonia Stem

Chemical reference substances

Berberine hydrochloride (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110713-200208)

Preparation of test solution

Accurately weigh 0.25 g of the coarse powder, accurately add 50 mL of a mixture of hydrochloric acid and methanol (1:100), weigh, allow to soak at room temperature for 30 minutes, treat ultrasonically for 45 minutes, allow to cool, weigh again, replenish the lost weight with a mixture of hydrochloric acid and methanol (1:100), mix well and filter. Accurately measure 5 mL of the filtrate in a flask and evaporate to dryness, dissolve the residue in a mixture of acetonitrile and water (3:7), transfer to a 5 mL volumetric flask, dilute to volume, mix well, filter, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX Eclipse Plus C18, 4.6×250 mm, 5 µm, P/N 959990-902
- Column temperature: 50 °C
- Mobile phase: acetonitrile-0.05mol/L potassium dihydrogen phosphate (pH 3.15) (25:75)
- Detector wavelength: 265 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Gongxuening Capsules (*Gongxuening Jiaonang*) – 宫血宁胶囊

Sample source

Commercially available Gongxuening Capsules

Chemical reference substances

Chonglou saponin VI (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 111592-200301)

Preparation of test solution

Grind the contents of 20 capsules to a fine powder, accurately weigh 1 g in a stoppered conical flask, accurately add 25 mL of methanol, and weigh. Treat ultrasonically for 40 minutes, allow to cool, weigh again, replenish the lost weight with methanol, and mix thoroughly.

Chromatographic conditions

- Column: ZORBAX XDB C8 4.6×150 mm, 5 µm (993967-906)
- Column temperature: 25 °C
- Mobile phase: A: acetonitrile, B: water; 0-40 min, 30-60 % A.
- Detector wavelength: 203 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Heye Pills (*Heye Wan*) – 荷叶丸

Sample source

Commercially available Heye Pills

Chemical reference substances

paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110736-200220)

Preparation of test solution

Cut a quantity of the pills into pieces and mix well, accurately weigh 1 g of the pieces in a stoppered conical flask, accurately add 10 mL of methanol, stopper and weigh, treat ultrasonically for 30 minutes, allow to cool, weigh again, replenish the lost weight with methanol, mix well, filter through the millipore membrane (0.45 µm) and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: acetonitrile-water (15:85)
- Detector wavelength: 230 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Paeoniflorin	4.562	6.675	22.50	240.2	9064	1.01

Bigflower Rhodiola Root (*Radix et Rhizoma Rhodiolae*) – 红景天

Sample source

Commercially available Bigflower Rhodiola Root

Chemical reference substances

Salidroside (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110818-200404)

Preparation of test solution

Accurately weigh 0.5 g of the powder in a stoppered conical flask, accurately add 10 mL of methanol, mix well and weigh. Treat ultrasonically for 30 minutes, allow to cool, weigh again, replenish the lost solvent with methanol and mix well. Filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX Extend C18 4.6×250 mm, 5 µm (770450-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water (15:85)
- Detector wavelength: 275 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r
Salidroside	4.190	12.976	21.04	482.0	7332	1.01

Red Ginseng (*Radix et Rhizoma Ginseng Rubra*) – 红参

Sample source

Commercially available Red Ginseng

Chemical reference substances

1. Ginsenoside Rb1, 2. Ginsenoside Rg1, 3. Ginsenoside Re (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 2. 110703-200322, 3. 0754-9912)

Preparation of test solution

Accurately weigh 1 g of the powder in a Soxhlet extractor, add a quantity of chloroform, heat under reflux on a water bath for 3 hours, discard the chloroform solution, evaporate the solvent from the residue. Transfer the residue with the extractor to a 100 mL conical flask. Accurately add 50 mL n-butanol saturated with water, tightly stopper, allow to stand overnight, treat ultrasonically for 30 minutes and filter. Accurately evaporate 25 mL of the filtrate to dryness in an evaporating dish, dissolve the residue in methanol, transfer to a 5 mL volumetric flask, dilute with methanol to volume and mix well. Filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18, 4.6×150 mm, 5 µm (993967-902)
- Column temperature: 25 °C
- Mobile phase: A: acetonitrile, B: water; 0-40 min, A: 19 %; 40-45 min, A: 19-28 %; 45-75 min, A: 28 %; 75-100 min, A: 28-40 %
- Detector wavelength: 203 nm

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Official Magnolia Flower (*Flos Magnoliae Officinalis*) – 厚朴花

Sample source

Commercially available Official Magnolia Flower

Chemical reference substances

1. Magnolol, 2. Honokiol (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1.0729-200006, 2.0730-9204)

Preparation of test solution

Accurately weigh 1 g of the coarse powder in a stoppered conical flask, accurately add 25 mL of methanol, stopper tightly and weigh, treat ultrasonically for 30 minutes, allow to cool and weigh again, replenish the lost weight with methanol and mix well, allow to stand for 30 minutes. Filter the supernatant liquid with a millipore membrane (0.45 µm) and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C8 4.6×150 mm, 5 µm (993967-906)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-methanol-water (20:45:35)

Common Fenugreek Seed (*Semen Trigonellae*) – 胡芦巴

Sample source

Commercially available Common Fenugreek Seed

Chemical reference substances

Trigonelline (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 883-200001)

Preparation of test solution

Accurately weigh 0.5 g of the powder in a conical flask, add 50 mL of 50 % methanol, and weigh. Allow to stand for 1 hour, treat ultrasonically for 45 minutes, allow to cool and weigh again, replenish the lost weight with 50 % methanol and mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.3 % acetic acid-0.03 % sodium dodecyl sulfonate (20:0.1:80)
- Detector wavelength: 265 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Trigonelline	2.033	4.549	12.10	85.5	9833	1.06

Giant Knotweed (*Rhizoma et Radix Polygoni Cuspidati*) – 虎杖

Sample source

Commercially available Giant Knotweed Rhizome

Chemical reference substances

Emodin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110756-200210)

Preparation of test solution

Accurately weigh 0.1 g of the powder in a stoppered conical flask, accurately add 25 mL of chloroform and 20 mL of sulfuric acid (2.5 mol/L), and weigh. Heat under reflux on a water bath at 80 °C for 2 hours, allow to cool and weigh again, replenish the lost solvent with chloroform and mix well. Separate the chloroform layer and evaporate accurately 10 mL to dryness. Dissolve the residue in methanol, transfer to a 10 mL volumetric flask, dilute to volume with methanol, mix well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.1 % phosphoric acid (75:25)
- Detector wavelength: 254 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Giant Knotweed (*Rhizoma et Radix Polygoni Cuspidati*) – 虎杖

Sample source

Commercially available Giant Knotweed Rhizome

Chemical reference substances

Polydatin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 111575-200301)

Preparation of test solution

Accurately weigh 0.1 g of the powder, accurately add 25 mL of dilute ethanol and weigh, heat under reflux for 30 minutes, cool and weigh again, replenish the lost solvent with dilute ethanol and mix well. Filter, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 μ m (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water (25:75)
- Detector wavelength: 306 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Hugan Tablets (*Hugan Pian*) – 护肝片

Sample source

Commercially available Hugan Tablets

Chemical reference substances

Schisandrin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110857-200203)

Preparation of test solution

Take 10 tablets of the drug, remove the coating, accurately weigh and grind to a fine powder, accurately weigh 0.7 g of the powder, heat under reflux with 25 mL of ethyl acetate for 30 minutes, allow to cool, filter, wash the residue and the container with 30 mL of ethyl acetate in portions, filter, combine the washings and filtrate, evaporate to dryness, dissolve the residue with methanol and transfer to a 10 mL volumetric flask, dilute with methanol to volume, mix well, filter, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18 4.6×250 mm, 5 μ m (990967-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water (61:39)
- Detector wavelength: 254 nm
- Flow rate: 1.0 mL/min
- Injection volume: 20 μ L

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector

Pagodatree Flower (carbonized) (*Flos Sophorae*) – 炒槐花

Sample source

Commercially available Pagodatree Flower (carbonized)

Chemical reference substances

Rutin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 100080-200306)

Preparation of test solution

Accurately weigh 0.3 g of the coarse powder in a stoppered conical flask, accurately add 50 mL of methanol, weigh and treat ultrasonically for 30 minutes, allow to cool, weigh again, replenish the lost solvent with methanol, and mix well. Filter, accurately measure 2 mL of the filtrate in a 10 mL volumetric flask, add methanol to volume and mix well.

Chromatographic conditions

- Column: ZORBAX SB-aq C18, 4.6×250 mm, 5 µm (880975-914)
- Column temperature: 40 °C
- Mobile phase: methanol-2 % glacial acetic acid (35:65)
- Detector wavelength: 257 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Huaijiao Pills (*Huaijiao Wan*) – 槐角丸

Sample source

Commercially available Huaijiao Pills

Chemical reference substances

baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number110715-200212)

Preparation of test solution

Accurately weigh 1.0 g of the pills in a pestle and grind with 80 mL of 50 % methanol, transfer to a 100 mL volumetric flask. Treat ultrasonically for 1 hour, allow to cool, dilute with 50 % methanol to volume, shake thoroughly and filter. Accurately measure 5 mL of the filtrate in a 10 mL volumetric flask, dilute with 50 % methanol to volume, shake thoroughly, filter through a millipore membrane (0.45 µm) and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 20 °C
- Mobile phase: methanol-3.7 % glacial acetic acid (44:56)
- Detector wavelength: 280 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Chinese Cork Tree (*Cortex Phellodendri Chinensis*) – 黄柏

Sample source

Commercially available Chinese Cork Tree

Chemical reference substances

Berberine hydrochloride (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110713-200208)

Preparation of test solution

Accurately weigh 0.1 g of the powder in a 100 mL volumetric flask, add 80 mL of the mobile phase, treat ultrasonically for 40 minutes, allow to cool, dilute with the mobile phase to volume, mix well, filter, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-0.1 % phosphoric acid (contain 0.1 % sodium dodecylsulfonate)(50:50)
- Detector wavelength: 265 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r

Huanglian Shangqing Pills (*Huanglian Shangqing Wan*)

黄连上清丸

Sample source

Commercially available Huanglian Shangqing Pills

Chemical reference substances

Berberine hydrochloride (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110713-200208)

Preparation of test solution

Accurately weigh 0.6 g of the pills, grind to a powder and put in a stoppered conical flask, accurately add 10 mL of a mixture of hydrochloric acid and methanol (1:100), stopper and weigh, heat in a water bath at 50 °C for 15 minutes, allow to reach room temperature, treat ultrasonically for 30 minutes, allow to reach room temperature, weigh again, replenish the lost weight with methanol, mix well, centrifugate and filter. Accurately measure 2 mL of the filtrate, evaporate to dryness at a lower temperature, dissolve the residue in a quantity of methanol and apply to a column (1 cm in diameter) packed with alkaline aluminum oxide (100-200 mesh, 8 g). Elute with 35 mL of methanol, collect the elutes and evaporate to dryness, dissolve the residue in a quantity of methanol and transfer to a 2 mL volumetric flask, dilute with methanol to volume, mix well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 40 °C
- Mobile phase: acetonitrile-potassium dihydrogen phosphate (35:65)
- Detector wavelength: 424 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r
Berberine	1.696	4.044	8.56	50.9	11184	1.09

Milkvetch Root (*Radix Astragali*) – 黄芪

Sample source

Commercially available Milkvetch Root

Chemical reference substances

Astragaloside IV (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0781-9807)

Preparation of test solution

Accurately weigh 4 g of the powder in a Soxhlet extractor, add 40 mL of methanol, allow to soak overnight, add again an appropriate quantity of methanol, heat under reflux on a water bath for 4 hours and concentrate the extracts to dryness. Add 10 mL of water and slightly heat to dissolve the residue, extract by shaking with four 40-mL quantities of n-butanol saturated with water, combine the extracts and wash with two 40 mL quantities of ammonia TS. Discard the ammonia solutions and evaporate the n-butanol extracts to dryness, dissolve the residue in 5 mL of water and cool. Apply it to a column packed with D101 macroporous resin, elute with 50 mL of water, 30 mL of 40 % ethanol, and 80 mL of 70 % ethanol successively, discard the water and 40 % ethanol eluents, collect the 70 % ethanol eluents and evaporate to dryness. Dissolve the residue in methanol, transfer to a 5 mL volumetric flask, dilute with methanol to volume and mix well.

Chromatographic conditions

- Column: ZORBAX Extend C18 4.6×250 mm, 5 µm (770450-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-water (35:65)
- Evaporator tube temperature: 80° C, Nebulizing temperature: 50° C, Air flow rate: 1.5 SLM
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Baical Skullcap Extrtact (*Extractum Scutellariae Siccus*)

黄芩提取物

Sample source

Commercially available Baical Skullcap Extract

Chemical reference substances

Baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110715-200212)

Preparation of test solution

Accurately weigh 10 mg in a 25 mL volumetric flask, add methanol to volume and shake well. Accurately measure 5 mL in a 25 mL volumetric flask, add methanol to volume, shake well, filter, and use the filtrate as the test solution.

Chromatographic conditions

- Column: Agilent TC-C18, 4.6×250 mm, 5 µm (518925-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.38 % phosphoric acid (47:53)
- Detector wavelength: 280 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Huixiang Juhe Pills (*Huixiang Juhe Wan*) – 茴香橘核丸

Sample source

Commercially available Huixiang Juhe Pills

Chemical reference substances

1. Psoralen, 2. Isopsoralen (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1. 110739-200309, 2. 110738-200309)

Preparation of test solution

Grind a quantity of the pills to a fine powder, accurately weigh 2 g of the powder in a stoppered conical flask, accurately add 50 mL of methanol, stopper tightly and weigh, treat ultrasonically for 50 minutes, allow to cool, weigh again and replenish the lost weight with the same solvents, mix well and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.02mol/L dipotassium hydrogen phosphate (20:80)
- Detector wavelength: 247 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Huoxue Zhitong Powder (*Huoxue Zhitong San*) – 活血止痛散

Sample source

Commercially available Huoxue Zhitong Powder

Chemical reference substances

Ferulic acid (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110773-9910)

Preparation of test solution

Accurately weigh about 2.3 g of the powder in a stoppered conical flask, add 20 mL of a 0.5 % solution of sodium carbonate, treat ultrasonically for 30 minutes, transfer the solution to a centrifuge tube, centrifugate at 3000 rpm for 10 minutes, and transfer the supernatant to a separating funnel. Wash the precipitate with three 10 ml quantities 0.5 % solution of sodium carbonate, combine the washings in the same separating funnel, extract with three 20 ml quantities of ether saturated with 2 % solution of sodium chloride, discard the ether layer and adjust the solution pH to 1-2 with hydrochloric acid, then extract the solution with two 25 ml and two 20 ml quantities of ether saturated with 2 % solution of sodium chloride. Combine the ether layer and remove the solvent from the extract to dryness, dissolve the residue in methanol and transfer to a 25 mL amber volumetric flask, dilute with methanol to volume, mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-methanol-1 % glacial acetic acid (14.2:14.2:71.6)
- Detector wavelength: 313 nm
- Flow rate: 1.0 mL/min

Chromatographic system

Huoxiang Zhengqi Oral Liquid (*Huoxiang Zhengqi Koufuye*)

藿香正气口服液

Sample source

Commercially available Huoxiang Zhengqi Oral Liquid

Chemical reference substances

1. Magnolol, 2. Honokiol (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1. 110729-200308, 2. 110730-9204)

Preparation of test solution

Accurately measure 5 mL of the liquid, add 2 drops of hydrochloric acid, extract with three 10 mL quantities of chloroform, combine the chloroform extracts and evaporate to dryness, dissolve the residue in a quantity of methanol, transfer the methanol solution to a 10 mL volumetric flask, dilute with methanol to volume, mix well, filter through a millipore membrane (0.45 μm) and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18, 4.6 \times 250 mm, 5 μm (990967-902)
- Column temperature: 25 $^{\circ}\text{C}$
- Mobile phase: methanol-isopropanol-water (47:20:33)
- Detector wavelength: 300 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 μL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r
Honokiol	2.508	8.771	11.83	148.5	11597	1.03

Huoxiang Zhengqi Soft Capsules (*Huoxiang Zhengqi Ruanjiaonang*)

藿香正气软胶囊

Sample source

Commercially available Huoxiang Zhengqi Soft Capsules

Chemical reference substances

1. Magnolol, 2. Honokiol (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1. 110729-200308, 2. 110730-9204)

Preparation of test solution

Cut open 15 capsules, collect the contents and mix well. Accurately weigh 0.25 g of the contents in a stoppered conical flask, accurately add 50 mL of 50 % ethanol, stopper tightly and weigh. Treat ultrasonically for 10 minutes, allow to reach room temperature and weigh again, replenish the lost weight with 50 % ethanol, shake thoroughly and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18, 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water (71:29)
- Detector wavelength: 294nm

Jiawei Xiaoyao Pills (*Jiawei Xiaoyao Wan*) – 加味逍遥丸

Sample source

Commercially available Jiawei Xiaoyao Pills

Chemical reference substances

Paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110736-200220)

Preparation of test solution

Grind the pills to a fine powder, accurately weigh 1 g of the powder in a stoppered conical flask, accurately add 50 mL of dilute ethanol, stopper tightly and weigh. Treat ultrasonically for 30 minutes, allow to cool, weigh again and replenish the lost weight with dilute ethanol. Mix thoroughly and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-water (23:77)
- Detector wavelength: 230 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Jianmin Yanhou Tablets (*Jianmin Yanhou Pian*) – 健民咽喉片

Sample source

Commercially available Jianmin Yanhou Tablets

Chemical reference substances

Gallic acid (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110831-9501)

Preparation of test solution

Accurately weigh 20 tablets, removed the coating, grind to a powder and mix thoroughly, accurately weigh 1.5 g of the powder in a stoppered conical flask, accurately add 50 mL of 50 % methanol, stopper tightly and weigh, treat ultrasonically for 30 minutes, allow to cool, weigh again, replenish the lost weight with 50 % methanol and mix thoroughly. Filter, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB-aq C18, 4.6×250 mm, 5 µm (880975-914)
- Column temperature: 35 °C
- Mobile phase: acetonitrile-(0.1% triethylamine + 0.1% phosphoric acid (7:93))
- Detector wavelength: 273 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Gallic acid	1.228	5.570	25.50	177.5	15491	1.03

Jianwei Xiaoshi Tablets (*Jianwei Xiaoshi Pian*) – 健胃消食片

Sample source

Commercially available Jianwei Xiaoshi Tablets

Chemical reference substances

Hesperidin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0721-200211)

Preparation of test solution

Grind 10 tablets to a fine powder. Accurately weigh 0.2 g of the powder, accurately add 20 mL of methanol, weigh, heat under reflux for 1 hour, allow to cool, weigh again, and replenish the lost weight with methanol, mix well and filter. Accurately measure 5 mL of the filtrate in a 10 mL volumetric flask and dilute with water to volume, mix well and filter, use the filtrate as test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 30 °C
- Mobile phase: methanol-0.5% glacial acetic acid (40:60)
- Detector wavelength: 283nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r
Hesperidin	3.615	6.922	13.86	234.5	3828	0.98

Turmeric (*Rhizoma Curcumae Longae*) – 姜黄

Sample source

Commercially available Turmeric

Chemical reference substances

Curcumin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110823-9802)

Preparation of test solution

Accurately weigh 0.2 g of the fine powder in a stoppered conical flask. Accurately add 10 mL of methanol, weigh, heat under reflux for 30 minutes, allow to cool, weigh again, replenish the lost weight with methanol, mix well and centrifuge. Accurately measure 1 mL of the supernatant in a 20 mL volumetric flask, dilute with methanol to volume and mix well.

Chromatographic conditions

- Column: ZORBAX XDB C8 4.6×150 mm, 5 µm (993967-906)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-4% glacial acetic acid (45:55)
- Detector wavelength: 430 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r
Curcumin	3.517	6.775	52.29	525.7	10585	0.97

Jinguo Tablets (*Jinguo Hanpian*) – 金果含片

Sample source

Commercially available Jinguo Tablets

Chemical reference substances

Hesperadin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110721-200211)

Preparation of test solution

Accurately weigh 20 tablets, grind to a fine powder; accurately weigh 2 g of the powder, put in a Soxhlet extractor, add 80 mL of methanol, heat under reflux until the extract is colorless and allow to cool. Transfer the extract to a 100 mL volumetric flask, wash the vessel with a quantity of methanol several times, add the washings to the same volumetric flask, and dilute with methanol to volume. Mix thoroughly and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-1.5% glacial acetic acid (26:74)
- Detector wavelength: 284nm
- Flow rate: 0.8 ml/min
- Injection volume: 5 µl

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r
Hesperidin	0.870	5.845	56.97	493.0	10917	0.97

Common Clubmoss Herb (*Herba Lysimachiae*) – 金钱草

Sample source

Commercially available Common Clubmoss Herb (Jiangsu province)

Chemical reference substances

1. Quercetin, 2. Kaempferol (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1. 0081-9905, 2. 0864-9901)

Preparation of test solution

Accurately weigh 1.5 g of the powder in a stoppered conical flask. Accurately add 50 mL of 80 % methanol, weigh, and heat under reflux on a water bath for 1 hour, allow to cool, weigh again, replenish the lost weight with 80 % methanol, mix well and filter. Accurately measure 25 mL of the filtrate, accurately add 5 mL of hydrochloric acid, heat on a water bath at 90 °C for 1 hour, cool immediately. Transfer to a 50 mL volumetric flask, dilute with 80 % methanol to volume and mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.4 % phosphoric acid (45:55)
- Detector wavelength: 360 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Jinsang Liyan Pills (*Jinsang Liyan Wan*) – 金嗓利咽丸

Sample source

Commercially available Jinsang Liyan Pills

Chemical reference substances

1. Magnolol, 2. Honokiol (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1. 110729-200308, 2.110730-9204)

Preparation of test solution

Grind 8 g of pills to a fine powder, accurately weigh 1.5 g in a stoppered conical flask, accurately add 25 mL of methanol, stopper tightly, and weigh. Treat ultrasonically for 30 minutes, allow to cool, weigh again, replenish the lost weight with methanol, and mix well. Filter through a millipore membrane (0.45 µm) and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18, 4.6×250 mm, 5 µm (990967-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water (76.5:23.5)
- Detector wavelength: 291 nm
- Flow rate: 0.9 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Jinsang Sanjie Pills (*Jinsang Sanjie Wan*) – 金嗓散结丸

Sample source

Commercially available Jinsang Sanjie Pills

Chemical reference substances

Chlorogenic acid (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110753-200212)

Preparation of test solution

Grind a quantity of the pills to a fine powder, accurately weigh 0.4 g in a stoppered conical flask, accurately add 10 mL of 50 % methanol, stopper tightly, and weigh. Treat ultrasonically for 30 minutes, allow to cool, weigh again, replenish the lost weight with 50 % methanol, mix well, filter through a millipore membrane (0.45 μ m), and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6 \times 150 mm, 5 μ m (883975-902)
- Column temperature: 35 $^{\circ}$ C
- Mobile phase: acetonitrile-0.4% phosphoric acid (13:87)
- Detector wavelength: 330 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 μ L

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Japanese Honeysuckle Flower (*Flos Lonicerae Japonicae*)

金银花

Sample source

Commercially available Japanese Honeysuckle Flower

Chemical reference substances

Chlorogenic acid (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110753-200212)

Preparation of test solution

Accurately weigh 0.05 g of the powder in a stoppered conical flask, accurately add 25 mL of 50 % methanol, weigh and treat ultrasonically for 30 minutes, allow to cool, weigh again and replenish the lost weight with 50 % methanol, and mix well. Filter, accurately measure 5 mL of the filtrate in a 25 mL amber volumetric flask, add 50 % methanol to volume and mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: acetonitrile-0.4% phosphoric acid (13:87)
- Detector wavelength: 327nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Jingfukang Granules (*Jingfukang Keli*) – 颈复康颗粒

Sample source

Commercially available Jingfukang Granules

Chemical reference substances

Puerarin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110752-200209)

Preparation of test solution

Grind a quantity of the granules to a fine powder and mix well. Accurately weigh 0.5 g of the powder in a stoppered conical flask, accurately add 25 mL of methanol, stopper tightly and weigh. Treat ultrasonically for 30 minutes, allow to cool, weight again, replenish the lost weight with methanol, shake well. Filter the supernatant through a millipore membrane (0.45 μm), use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6 \times 250 mm, 5 μm (880975-902)
- Column temperature: 25 $^{\circ}\text{C}$
- Mobile phase: methanol-0.36% phosphoric acid (23:77)
- Detector wavelength: 250 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 μL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Jiuqi Niantong Pills (*Jiuqi Niantong Wan*) – 九气拈痛丸

Sample source

Commercially available Jiuqi Niantong Pills

Chemical reference substances

Hesperidin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0721-200211)

Preparation of test solution

Grind the pills to a fine powder, accurately weigh 0.5 g of the powder in a stoppered conical flask, accurately add 50 mL of methanol and stopper tightly. Weigh and allow to soak overnight. Treat ultrasonically for 30 minutes, allow to cool. Weigh again and replenish the lost weight with methanol, mix well. Filter, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18, 4.6×150 mm, 5 µm (993967-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.5% glacial acetic acid (36:64)
- Detector wavelength: 283 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Hesperidin	6.188	10.783	3.50	85.9	4437	1.04

Jiuwei Qianghuo Pills (*Jiuwei Qianghuo Wan*) – 九味羌活丸

Sample source

Commercially available Jiuwei Qianghuo Pills

Chemical reference substances

baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110715-200212)

Preparation of test solution

Grind the pills to a fine powder, accurately weigh 0.5 g of the powder, accurately add 50 mL of methanol and weigh. Heat under reflux for 1 hour, allow to cool, weigh again and replenish the lost weight with methanol. Mix thoroughly and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water-phosphoric acid (47:53:0.2)
- Detector wavelength: 280 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector

Red Tangerine Peel (*Exocarpium Citri Rubrum*) – 橘红

Sample source

Commercially available Red Tangerine Peel

Chemical reference substances

hesperidin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110722-200309)

Preparation of test solution

Accurately weigh about 0.2 g of the powder in a conical flask, accurately add 20 mL of methanol, heat and reflux for 1 hour, allow to cool, transfer to a 50 mL volumetric flask, wash the container and the residue with a little methanol for several times, add the washings to the same volumetric flask, add methanol to volume, mix well, filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water (40:60)
- Detector wavelength: 248 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r
Hesperidin	4.918	7.101	77.70	1260.8	4510	1.00

Juhong Tanke Mixture (*Juhong Tanke Ye*) – 橘红痰咳液

Sample source

Commercially available Juhong Tanke Mixture

Chemical reference substances

naringin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110722-200309)

Preparation of test solution

Accurately measure 10 mL of the mixture, extract the mixture with six 10 mL quantities of ethyl acetate by shaking, combine the ethyl acetate extracts, and evaporate to dryness. Dissolve the residue in methanol and transfer to 100 mL volumetric flask, dilute with methanol to volume, mix well, and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water-glacial acetic acid (31:69:3)
- Detector wavelength: 283nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

Juhong Pills (*Juhong Wan*) – 橘红丸

Sample source

Commercially available Juhong Pills

Chemical reference substances

naringin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110722-200309)

Preparation of test solution

Grind a quantity of pills to a powder, accurately weigh 0.4 g of the powder in a 10 mL volumetric flask, accurately add 10 mL of the mobile phase, stopper tightly and weigh. Treat ultrasonically for 30 minutes, allow to cool. Weigh again and replenish the lost weight with the mobile phase, mix well, filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-acetic acid-water (33:2:65)
- Detector wavelength: 283nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Cassia Seed (*Semen Cassiae*) – 决明子

Sample source

Commercially available Cassia Seed

Chemical reference substances

Chrysophanol (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110796-200309)

Preparation of test solution

Accurately weigh 0.5 g of the powder in a stoppered conical flask, accurately add 50 mL of methanol and weigh. Heat under reflux for 30 minutes, allow to cool, weigh again, replenish the lost weight with methanol, mix well and filter. Accurately measure 25 mL of the filtrate and evaporate the filtrate to dryness. Add 30 mL of 10 % hydrochloric acid to the filtrate. Heat for 1 hour on a water bath and cool immediately. Extract the filtrate with four 30 mL quantities of chloroform. Combine chloroform extracts, evaporate to dryness on a water bath. Dissolve the residue with a mixture of dehydrated ethanol and ethyl acetate (2:1) in a 10 mL volumetric flask. Dilute with the same solvent to volume, mix well, filter, and use the filtrate as test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.1 % phosphoric acid (87:13)
- Detector wavelength: 254 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Kaixiong Shunqi Pills (*Kaixiong Shunqi Wan*) – 开胸顺气丸

Sample source

Commercially available Kaixiong Shunqi Pills

Chemical reference substances

1. Magnolol, 2. Honokiol (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1. 110729-200308, 2. 110730-9204)

Preparation of test solution

Grind a quantity of the pills to a fine powder. Accurately weigh 2 g in a stoppered conical flask, accurately add 50 mL of methanol and weigh. Treat ultrasonically for 40 minutes and allow to cool. Weigh again and replenish the lost weight with methanol, mix well and filter. Accurately measure 10 mL of the filtrate, evaporate the filtrate to dryness. Dissolve the residue with 20 mL of solution of hydrochloric acid (1:10) in portions, and transfer to a separator. Dissolve the residue with 15 mL of chloroform, in portions, and transfer to the same separator, extract by shaking. Separate the chloroform solution, extract the water solution with two 15 mL quantities of chloroform. Combine the chloroform solution, wash with 20 mL of water. Extract the washings with 10 mL of chloroform. Combine the chloroform extracts, evaporate the solvent to dryness. Dissolve the residue in 90 % methanol, by slightly heating if necessary, and transfer to a 10 mL volumetric flask. Dilute with methanol to volume and mix well. Filter through a millipore membrane (0.45 μ m), use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 μ m (880975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-5% glacial acetic acid (54:46)
- Detector wavelength: 294nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 μ L

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Kanggan Granules (*Kanggan Keli*) – 抗感颗粒

Sample source

Commercially available Kanggan Granules

Chemical reference substances

paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110736-200220)

Preparation of test solution

Grind the granules to a fine powder. Accurately weigh 0.6 g of the powder in a stoppered conical flask, accurately add 50 mL of methanol and weigh. Treat ultrasonically for 10 minutes, allow to cool, weigh again and replenish the lost weight with methanol, mix well and filter. Accurately measure 10 mL of the successive filtrate, evaporate the filtrate to dryness. Dissolve the residue in 20 % methanol and transfer to a 10 mL volumetric flask, dilute with 20 % methanol to volume, and mix well. Filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water-glacial acetic acid (30:70:0.5)
- Detector wavelength: 230 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

Kanggu Zengsheng Capsules (*Kanggu Zengsheng Jiaonang*)

抗骨增生胶囊

Sample source

Commercially available Kanggu Zengsheng Capsules

Chemical reference substances

icariine (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0737-9910)

Preparation of test solution

Grind the contents to a fine powder, accurately weigh 1 g in a 100 mL stoppered conical flask, accurately add 50 mL of 50 % ethanol, stopper tightly, and weigh. Treat ultrasonically for 1 hour, allow to cool, weigh again, replenish the lost weight with 50 % ethanol, and shake well. Filter through a millipore membrane (0.45 μ m), and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18 4.6 \times 250 mm, 5 μ m (990967-902)
- Column temperature: 25 $^{\circ}$ C
- Mobile phase: acetonitrile-water (25:75)

Kouyanqing Granules (*Kouyanqing Keli*) – 口炎清颗粒

Sample source

Commercially available Kouyanqing Granules

Chemical reference substances

Chlorogenic acid (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110753-200212)

Preparation of test solution

Grind 20 g of the granules to a fine powder, accurately weigh 0.1 g of the powder in a stoppered conical flask, accurately add 10 mL of 50 % methanol. Stopper tightly, allow to stand for 15 minutes, mix well, filter through a millipore membrane (0.45 μm), and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6 \times 150 mm, 5 μm (883975-902)
- Column temperature: 35 $^{\circ}\text{C}$
- Mobile phase: acetonitrile-0.4 % phosphoric acid (12:88)
- Detector wavelength: 327nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 μL

Chromatographic system

Lightyellow Sophora Root (*Radix sophorae Flavescientis*) – 苦参

Sample source

Commercially available Lightyellow Sophora Root

Chemical reference substances

1. Matrine, 2. Oxymatrine (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1.110805-200306, 2.110780-200306)

Preparation of test solution

Accurately weigh 0.3 g of the powder in a stoppered conical flask and accurately add 0.5 mL of strong ammonia TS and 20 mL of chloroform, stopper tightly and weigh. Treat ultrasonically for 30 minutes, allow to cool and weigh again, replenish the lost solvent with chloroform and mix well, filter. Accurately measure 5 mL of the filtrate and apply to a small column (1 cm in inner diameter) packed with neutral alumina (100-200 mesh, 5 g) and elute with 20 mL quantities of chloroform, a mixture of chloroform and methanol (7:3) successively, collect the eluents and evaporate to dryness. Dissolve the residue with a small quantity of ethanol and transfer to a 10 mL volumetric flask and dilute with ethanol to volume, and mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 20 °C
- Mobile phase: acetonitrile-methanol-0.05 % phosphoric acid (1.5 % sodium dodecylsulphate) (30:10:60)
- Detector wavelength: 220 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Lidan Paishi Tablets (*Lidan Paishi Pian*) – 利胆排石片

Sample source

Commercially available Lidan Paishi tablets

Chemical reference substances

Baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110715-200212)

Preparation of test solution

Accurately weigh 20 tablets, remove the coating and grind to a fine powder. Accurately weigh 0.5 g in a stoppered conical flask, accurately add 50 mL of 70 % ethanol and weigh. Treat ultrasonically for 30 minutes, allow to cool, weigh again and replenish the lost weight with 70 % ethanol, mix well and filter. Accurately measure 5 mL of the filtrate in a 25 mL volumetric flask, dilute with 70 % ethanol to volume, mix well and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX Eclipse Plus C18 4.6×250 mm, 5 µm (959990-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.5% phosphoric acid (40:60)
- Detector wavelength: 280 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Weeping Forsythia Extract (*Extractum Forsythiae Siccus*)

连翘提取物

Sample source

Commercially available Weeping Forsythia Extract

Chemical reference substances

Forsythin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110821-200305)

Preparation of test solution

Accurately weigh 1.0 g in a stoppered conical flask, accurately add 15 mL of methanol, and weigh. Allow to stand overnight, treat ultrasonically for 25 minutes, allow to cool, weigh again, replenish the lost weight with methanol, shake well and filter. Accurately measure 5 mL of the filtrate, evaporate to near dryness, and mix well with 0.5 g of neutral alumina and then transfer to a neutral alumina column (100-200 mesh). Elute with 120 mL of 70 % ethanol, collect the eluents, and concentrate to dryness. Dissolve the residue in 50 % methanol in a 10 mL volumetric flask, add 50 % methanol to volume, shake well and filter.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-water (24:76)

Lingyang Ganmao Tablets (*Lingyang Ganmao Pian*) – 羚羊感冒片

Sample source

Commercially available Lingyang Ganmao Tablets

Chemical reference substances

Arctiin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0819-9802)

Preparation of test solution

Grind 10 tablets to a fine powder and remove the coating. Accurately weigh 0.25 g of the powder in a stoppered conical flask, accurately add 20 mL of 50 % methanol, stopper tightly, and weigh. Treat ultrasonically for 20 minutes, allow to cool, and weigh again. Replenish the lost weight with 50 % methanol, mix well, filter through a millipore membrane (0.45 μm), and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6 \times 250 mm, 5 μm (880975-902)
- Column temperature: 25 $^{\circ}\text{C}$

Aloes (*Aloe*) – 芦荟

Sample source

Commercially available Aloes

Chemical reference substances

barbaloin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0787-200303)

Preparation of test solution

Accurately weigh 0.025 g of the power in a 25 mL volumetric flask, add a quantity of methanol, treat ultrasonically for 30 minutes, allow to cool, add methanol to volume, mix well, filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: acetonitrile-water (25:75)
- Detector wavelength: 355 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Lusika Pills (*Lusika Wan*) – 鹭鸶咯丸

Sample source

Commercially available Lusika Pills

Chemical reference substances

Geniposide (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110749-200309)

Preparation of test solution

Grind a quantity of the pills. Accurately weigh 0.1 g in a stoppered conical flask and accurately add 10 mL of methanol, stopper tightly and weigh. Treat ultrasonically for 30 minutes, allow to cool. Weigh again and replenish the lost weight with methanol, mix well and filter through a millipore membrane (0.45 µm), use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: acetonitrile-water (12:88)
- Detector wavelength: 238nm
- Flow rate: 1.5 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Dogbane Leaf (*Folium Apocyni Veneti*) – 罗布麻叶

Sample source

Commercially available Dogbane Leaf

Chemical reference substances

Quercetin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0081-9905)

Preparation of test solution

Accurately weigh 0.5 g of the powder in a stoppered conical flask, accurately add 50 mL of 80 % methanol, weigh, heat under reflux on a water bath for 1 hour, cool, weigh again, replenish the lost weight with 80 % methanol, mix well and filter. Accurately measure 10 mL of the filtrate, add 1 mL of hydrochloric acid, heat under reflux on a water bath at 90 °C for 60 minutes, cool immediately, transfer to a 25 mL volumetric flask, dilute with 80 % methanol to volume, mix well.

Chromatographic conditions

- Column: ZORBAX XDB C8 4.6×150 mm, 5 µm (993967-906)
- Column temperature: 30 °C
- Mobile phase: methanol-0.4 % phosphoric acid (45:55)
- Detector wavelength: 360 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Quercetin	7.160	12.241	48.77	984.4	8740	1.02

Ephedra Herb (*Herba Ephedrae*) – 麻黄

Sample source

Commercially available Ephedra

Chemical reference substances

Ephedrine hydrochloride (National Institute for the Control of Pharmaceutical and Biological Products)

Preparation of test solution

Accurately weigh 0.2 g of the fine powder in a stoppered conical flask, accurately add 25 mL of methanol, weigh, treat ultrasonically for 45 minutes, allow to cool, weigh again and replenish the lost weight with methanol, shake well and filter. Accurately apply 1 mL of the successive filtrate to a small column (1 cm in inner diameter) packed with neutral aluminium oxide (100-200 mesh, 1.5 g), elute with 50 % methanol. Collect about 9 mL of the eluent in a 10 mL volumetric flask, add 1 drop of phosphoric acid, dilute with 50 % methanol to volume, and mix well. Filter through a millipore membrane (0.45 µm), use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-0.1% phosphoric acid (6:94)
- Detector wavelength: 207 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Maren Runchang Pills (*Maren Runchang Wan*) – 麻仁润肠丸

Sample source

Commercially available Maren Runchang Pills

Chemical reference substances

1. Emodin, 2. Chrysophanol
(National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1. 110756-200210, 2. 110796-200309)

Preparation of test solution

Cut a quantity of the pills into pieces. Accurately weigh 1 g, grind well with 1.5 g of kieselguhr, transfer to a Soxhlet extractor, add a quantity of ethanol, and heat under reflux to the extract colorless. Transfer the extract solution to a 50 mL volumetric flask, dilute to volume with ethanol and shake well. Accurately measure 10 mL of the solution in a flask, and evaporate to near dryness on a water bath. Add 15 mL of a mixture of hydrochloric acid and 30 % solution of methanol (1:10), heat on a water bath for 1 hour, and cool immediately. Extract the solution with four 15 mL quantities of chloroform by shaking, combine the chloroform solution, and evaporate to dryness. Dissolve the residue in a quantity of methanol, transfer to a 10 mL volumetric flask, dilute to volume, mix well, filter through a millipore membrane (0.45 µm), and use the filtrate as the test solution.

Chromatographic conditions

- Column: Agilent TC-C18, 4.6×250 mm, 5 µm (518925-902)
- Column temperature: 27 °C
- Mobile phase: methanol-0.1% phosphoric acid (80:20)
- Detector wavelength: 254nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Maren Pills (*Maren Wan*) – 麻仁丸

Sample source

Commercially available Maren Pills

Chemical reference substances

1. Emodin, 2. Chrysophanol
(National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 1. 110756-200210, 2. 110796-200309)

Preparation of test solution

Grind a quantity of the pills to a fine powder. Accurately weigh 0.8 g of the powder, transfer to a Soxhlet extractor, add a quantity of ethanol, and heat under reflux until the extract is colorless. Evaporate the extract to dryness on a water bath. Add 15 mL of a mixture of 30 % solution of methanol and hydrochloric acid (10:1), heat on a water bath for 50 minutes, and cool immediately. Extract the solution with five 15 mL quantities of chloroform by shaking, combine the chloroform solution, and evaporate to dryness. Dissolve the residue with a mixture of dehydrated ethanol and ethyl acetate (2:1), transfer to a 25 mL volumetric flask, dilute to volume, mix well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: Agilent TC-C18, 4.6× 250 mm, 5 µm (518925-902)
- Column temperature: 27 °C

Maiwei Dihuang Pills (*Maiwei Dihuang Wan*) – 麦味地黄丸

Sample source

Commercially available Maiwei Dihuang Pills

Chemical reference substances

Loganin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 111640-200205)

Preparation of test solution

Grind the pills to a fine powder and mix well. Accurately weigh 1 g of the powder in a stoppered conical flask, accurately add 25 mL of 50 % methanol, stopper tightly, and weigh. Treat ultrasonically for 15 minutes, heat under reflux for 1 hour and cool. Weigh again and replenish the lost weight with 50 % methanol, mix well and filter. Accurately measure 10 mL of the filtrate, apply to a column (1 cm in internal diameter) packed with neutral alumina (100-200 mesh, 4 g). Elute with 50 mL of 40 % methanol, collect the eluent. Evaporate to dryness and dissolve the residue in a quantity of 50 % methanol, transfer to a 5 mL volumetric flask, dilute with 50 % methanol to volume, and mix well. Filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)

Mingmu Dihuang Pills (*Mingmu Dihuang Wan*) – 明目地黄丸

Sample source

Commercially available Mingmu Dihuang Pills

Chemical reference substances

Paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110736-200220)

Preparation of test solution

Cut the pills into pieces, accurately weigh 0.5 g, accurately add 50 mL of 70 % methanol, stopper tightly and weigh. Treat ultrasonically for 45 minutes, allow to cool, weigh again, replenish the lost weight with 70 % methanol and shake well. Accurately measure 25 mL of the solution and evaporate to dryness. Dissolve the residue in 25 mL of water by warming, allow to cool, extract with three 25 mL quantities of n-butanol and evaporate to dryness. Dissolve the residue in methanol and transfer to a 5 mL volumetric flask, add methanol to volume and shake well. Filter through a millipore membrane (0.45 µm) and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C

Common Scouring Rush Herb (*Herba Equiseti Hiemalis*) – 木 賊

Sample source

Commercially available Common Scouring Rush Herb

Chemical reference substances

Kaempferol (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0864-9901)

Preparation of test solution

Accurately weigh 0.75 g of the powder in a stoppered conical flask, accurately add 50 mL of 75 % methanol, weigh, heat on a water bath for 1 hour, allow to cool, weigh again, replenish the lost weight with 75 % methanol, mix well and filter. Accurately measure 20 mL of the filtrate, accurately add 5 mL of hydrochloric acid, heat on a water bath for 1 hour, and allow to cool. Transfer to a 50 mL volumetric flask, dilute with 75 % methanol to volume and mix well, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 30 °C

Naodesheng Tablets (*Naodesheng Pian*) – 脑得生片

Sample source

Commercially available Naodesheng Tablets

Chemical reference substances

1. Ginsenoside Rg1, 2. Ginsenoside Rb1, 3. Notoginsenoside R1 (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1.110703-200322, 2.0704-9710, 3.110745-200312)

Preparation of test solution

Remove the coating from 20 tablets, accurately weigh, grind well, accurately weigh 1 g in a stoppered conical flask, accurately add 50 mL of n-butanol saturated with water, stopper tightly and weigh. Treat ultrasonically for 20 minutes, allow to cool, weigh again, replenish the lost weight with n-butanol saturated with water, shake well and filter. Accurately measure 25 mL of the filtrate in a separating funnel, and wash twice with ammonia TS (15 mL, 10 mL). Evaporate the n-butanol solution to dryness, dissolve the residue in methanol, transfer to a 5 mL volumetric flask, add methanol to volume and shake well. Filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18 4.6×250 mm, 5 μ m (990967-902)
- Column temperature: 25 °C
- Mobile phase: A: acetonitrile, B: water; 0-20 min: 20-40% A, 20-26min: 40-20% A

Naolejing Syrup (*Naolejing*) – 脑乐静

Sample source

Commercially available Naolejing Syrup

Chemical reference substances

Ammonium glycyrrhizinate (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0731-9704)

Preparation of test solution

Accurately measure 10 ml of the syrup in a 50 mL volumetric flask, dilute to volume with dilute ethanol TS, shake well, and filter. Discard the initial filtrate, accurately measure 1 mL of the filtrate, in a 10 mL volumetric flask, dilute to volume with dilute ethanol TS, shake well and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: Agilent TC-C18 4.6×250, 5 µm (518925-902)
- Column temperature: 20 °C
- Mobile phase: methanol-2.5% glacial acetic acid (35:65)
- Detector wavelength: 254 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Area (mAU*s)	n	USP T _r
Glycyrrhizinic acid	8.76	24.41	662.0	14299	1.03

Bovine Bezoar (*Calculus Bovis*) – 八珍益母丸

Sample source

Commercially available Japanese
Ardisia Herbs

Chemical reference substances

Bilirubin (National Institute for the
Control of Pharmaceutical and Bi-
ological Products, Batch number:
100077-200402)

Preparation of test solution

Accurately weigh 5 mg of the
powder in a 25 mL amber volumet-
ric flask. Add 20 mL of a mixture
of chloroform and glacial acetic
acid (4:1), treat ultrasonically for
10 minutes, dilute with the mixture
to volume and mix well. Filter
through a millipore membrane
(0.45 µm) and use the filtrate as
the test solution. Stored in a dark
place and protect from light.

Chromatographic conditions

- Column: ZORBAX SB C18
4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-ace-
tonitrile-2% glacial acetic acid
(72:25:3)
- Detector wavelength: 452 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary
pump with vacuum degasser
- Agilent 1200 Series high-perfor-
mance autosampler
- Agilent 1200 Series thermosta-
ted column compartment
- Agilent 1200 Series variable
wavelength detector
- System control through Agilent
ChemStation revision B.01.01

Niuhuang Jiangya Capsules (*Niuhuang Jiangya Jiaonang*)

牛黄降压胶囊

Sample source

Commercially available Niuhuang Jiangya Capsules

Chemical reference substances

Baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110715-200212)

Preparation of test solution

Grind the contents of the capsules to a fine powder. Accurately weigh 0.5 g of the powder in a stoppered conical flask, accurately add 50 mL of dilute ethanol TS, stopper tightly and weigh. Heat under reflux for 30 minutes, allow to cool, weigh again, replenish the lost weight with dilute ethanol TS, stir well and filter. Accurately transfer 5 mL of the solution to a 100 mL volumetric flask and add dilute ethanol TS to volume, mix well and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water-glacial acetic acid (50:50:1)
- Detector wavelength: 280 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Niuhuang Jiangya Capsules (*Niuhuang Jiangya Jiaonang*)

牛黄降压胶囊

Sample source

Commercially available Niuhuang Jiangya Capsules

Chemical reference substances

Paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110736-200220)

Preparation of test solution

Grind the contents of the capsules to a fine powder. Accurately weigh 1 g of the powder in a stoppered conical flask, accurately add 50 mL of water, stopper tightly and weigh. Treat ultrasonically for 45 minutes, allow to cool, weigh again, replenish the lost weight with water, stir well and centrifuge. Apply 10 mL of the supernatant to a column (1.5 cm in inner diameter), packed with 3 g of dry polyamide and elute with water, collect 60 mL of the eluents. Evaporate to dryness on a water bath, dissolve the residue in dilute ethanol TS, transfer to a 10 mL volumetric flask and add dilute ethanol TS to volume, mix well and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18 4.6×150 mm, 5 µm (993967-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-water (15:85)
- Detector wavelength: 230 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Niuhuang Jiedu Tablets (*Niuhuang Jiedu Pian*) – 牛黄解毒片

Sample source

Commercially available Niuhuang Jiedu Tablets

Chemical reference substances

Baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110715-200212)

Preparation of test solution

Remove the coatings from 20 tablets and grind to a fine powder. Accurately weigh 0.3 g of the powder, add 30 ml of 70% ethanol, treat ultrasonically for 20 minutes, allow to cool and filter. Transfer the filtrate to a 50 mL volumetric flask, wash the container and residue with small quantity of 70 % ethanol in portions, combine the washings in the same volumetric flask, dilute to volume with 70 % ethanol and shake well. Accurately measure 2 mL of the solution in a 10 mL volumetric flask, dilute to volume with 70 % ethanol and shake well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 30 °C
- Mobile phase: methanol-0.3 % phosphoric acid (42:58)
- Detector wavelength: 315 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Niuhuang Qianjin Powder (*Niuhuang Qianjin San*) – 牛黄千金散

Sample source

Commercially available Niuhuang Qianjin Powder

Chemical reference substances

Berberine hydrochloride (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110713-200208)

Preparation of test solution

Accurately weigh about 0.5 g of the powder in a stoppered conical flask, mix well, accurately add 50 mL of a mixture of hydrochloric acid and methanol (1:100), weigh. Heat under reflux on a water bath at 60 °C for 15 minutes. Treat ultrasonically for 30 minutes, allow to cool, weigh again, and replenish the lost weight with a mixture of hydrochloric acid and methanol (1:100). Shake well, filter. Accurately transfer 2 mL of the filtrate to a 10 mL volumetric flask, dilute with methanol to volume, shake well and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18 4.6×150 mm, 5 µm (993967-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-water (containing 0.34% potassium dihydrogen phosphate and 0.17% sodium dodecylsulphonate) (50:50)
- Detector wavelength: 346nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Qiju Dihuang Pills (*Qiju Dihuang Wan*) – 杞菊地黄丸

Sample source

Commercially available Qiju Dihuang Pills

Chemical reference substances

Loganin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 111640-200401)

Preparation of test solution

Grind the pills to a fine powder, accurately weigh 1 g in a stoppered conical flask, accurately add 25 mL of 50 % methanol, stopper tightly and weigh. Heat under reflux for 1 hour, allow to cool, weigh again, replenish the lost weight with 50 % methanol, shake well and filter. Accurately apply 10 mL of the filtrate to a neutral alumina column (100-200 mesh, 4 g, 1 cm in inner diameter), elute with 50 mL of 40 % methanol, collect the eluent, and evaporate to dryness. Dissolve the residue in 50 % methanol and accurately transfer to a 5 mL volumetric flask, dilute with 50 % methanol to volume, and shake well. Filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-methanol-0.1% phosphoric acid (10:5:85)
- Detector wavelength: 236 nm

Qipi Pills (*Qipi Wan*) – 启脾丸

Sample source

Commercially available Qipi Pills

Chemical reference substances

Ammonium glycyrrhizinate (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0731-9704)

Preparation of test solution

Cut the pills into pieces, mix well, accurately measure 0.2 g in a stoppered conical flask, accurately add 10 mL of the mobile phase, and weigh. Allow to stand overnight, treat ultrasonically for 30 minutes, allow to cool, weigh again, and replenish the lost weight with mobile phase. Mix well and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-0.2mol/L ammonium acetate- glacial acetic acid (62:38:1)
- Detector wavelength: 250 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Qiangjin Zhidai Pills (*Qiangjin Zhidai Wan (Shuiwan)*)

千金止带丸（水丸）

Sample source

Commercially available Qiangjin Zhidai Pills (Watered Pills)

Chemical reference substances

Paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110736-200220)

Preparation of test solution

Grind the pills to a fine powder, accurately weigh about 1 g in a stoppered conical flask, accurately add 25 mL of 30 % ethanol solution, stopper and accurately weigh. Treat ultrasonically for 30 minutes, cool, accurately weigh again, and replenish the lost weight with 30 % solution of methanol. Mix well, filter with a millipore membrane (0.45 μ m) and use successive filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6 \times 150 mm, 5 μ m (883975-902)
- Column temperature: 40 $^{\circ}$ C
- Mobile phase: methanol-water (12:88)
- Detector wavelength: 230 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 μ L

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r

Pharbitis Seed (*Semen Pharbitidis*) – 牽牛子

Sample source

Commercially available Pharbitis Seed

Chemical reference substances

1. Caffeic acid, 2. Caffeic acid acetate (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1. 110885-200102, 2. 111678-200401)

Preparation of test solution

Accurately weight 2 g of the powder in a Soxhlet extractor, extract with a quantity of petroleum ether (60-90 °C) under reflux for 2 hours, discard petroleum ether, and evaporate the residue to dryness. Extract the residue with a mixture of chloroform and methanol (3:1) for 6 hours, evaporate the extract to a small quantity, transfer to a 10 mL volumetric flask, wash the container with the same solvent, combine the washings in the same volumetric flask. Dilute to volume, and mix well.

Chromatographic conditions

- Column: ZORBAX XDB C18, 4.6×150 mm, 5 µm (993967-902)
- Column temperature: 25 °C

Qinlian Tablets (*Qinlian Pian*) – 芩连片

Sample source

Commercially available Qinlian Tablets

Chemical reference substances

Baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110715-200212)

Preparation of test solution

Grind the tablets to a fine powder, and accurately weigh 0.15 g in a 25 mL volumetric flask. Add 20 mL of 70 % ethanol, treat ultrasonically for 20 minutes, allow to cool, dilute to volume with 70 % ethanol, and mix well. Allow to stand, filter the supernatant through a millipore membrane (0.45 µm), and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 40 °C
- Mobile phase: methanol-4% glacial acetic acid (37:63)
- Detector wavelength: 277nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector

Ash Bark (*Cortex Fraxini*) – 秦皮

Sample source

Commercially available Ash Bark

Chemical reference substances

1. Aesculin, 2. Aesculetin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1. 110740-200104, 2. 110741-200105)

Preparation of test solution

Accurately weigh 0.5 g of the powder in a stoppered conical flask, accurately add 50 mL of methanol, weigh, heat under reflux on a water bath for 60 minutes, allow to cool, weigh again, replenish the lost weight with methanol, mix well. Filter through a millipore membrane (0.45 µm) and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX Eclipse Plus C18, 4.6×250 mm, 5 µm (959990-902)
- Column temperature: 40 °C
- Mobile phase: acetonitrile-0.1% phosphoric acid (14:86)
- Detector wavelength: 334 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Qingfei Yihuo Pills (*Qingfei Yihuo Wan*) – 清肺抑火丸

Sample source

Commercially available Qingfei Yihuo Pills

Chemical reference substances

Baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110715-200212)

Preparation of test solution

Grind the pills to a fine powder, accurately weigh 0.25 g, accurately add 50 mL of 70 % ethanol and weigh. Heat under reflux for 3 hours, cool, and weigh again. Replenish the lost weight with 70 % ethanol, mix well and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water-phosphoric acid (38:62:0.3)
- Detector wavelength: 280 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Orientvine Stem (*Caulis Sinomenii*) – 青风藤

Sample source

Commercially available Orientvine Stem

Chemical reference substances

Sinomenine (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110774-200206)

Preparation of test solution

Accurately weigh 0.5 g of the powder in a stoppered conical flask, accurately add 20 mL of 70 % ethanol, stopper tightly, weigh, treat ultrasonically for 20 minutes, allow to cool, weigh again and replenish the lost weight with 70 % ethanol, shake thoroughly, filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C8 4.6×250 mm, 5 µm (990967-902)
- Column temperature: 35 °C
- Mobile phase: methanol-phosphate BS (to 0.01 mol/L sodium hydrogen phosphate solution, monitor the pH value to 8.0 with 0.01 mol/L sodium dihydrogen phosphate solution, and monitor the pH value to 9.5 with 1 % triethylamine) (58:42)
- Detector wavelength: 262 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Qingguo Pills (*Qingguo Wan*) – 青果丸

Sample source

Commercially available Qingguo Pills

Chemical reference substances

Baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110715-200212)

Preparation of test solution

Cut a quantity of the pills into pieces, accurately weigh 1 g and grind well with 0.5 g of kieselguhr. Add 40 mL of 70 % ethanol, heat under reflux for 2 hours, cool, and filter. Wash the container and residue with a quantity of 70 % ethanol. Combine the washings and the filtrate in a 100 mL volumetric flask, dilute to volume with 70 % ethanol, mix well, filter, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.36% phosphoric acid (43:57)
- Detector wavelength: 280 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Qinghou Liyan Granules (*Qinghou Liyan Keli*) – 清喉利咽颗粒

Sample source

Commercially available Qinghou Liyan Granules

Chemical reference substances

Baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110715-200212)

Preparation of test solution

Grind the granules to a fine powder, accurately weigh 0.5 g in a 50 mL stoppered conical flask, accurately add 20 mL of water, weigh, treat ultrasonically for 2 hours, allow to cool, weigh again, replenish the lost weight with water, mix well. Accurately add 20 mL of ethanol, mix well, allow to stand overnight and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 30 °C
- Mobile phase: methanol-3.0% glacial acetic acid (43:57)
- Detector wavelength: 283nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r
Baicalin	8.535	23.827	52.24	1826.6	11057	1.03

Qinghouyan Mixture (*Qinghouyan Heji*) – 清喉咽合剂

Sample source

Commercially available Qinghouyan Mixture

Chemical reference substances

Baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110715-200212)

Preparation of test solution

Accurately measure 1 mL of the mixture in a 50 mL volumetric flask, add a quantity of methanol, treat ultrasonically for 20 minutes, allow to cool, dilute to volume with methanol and shake well. Accurately measure 10 mL in a 25 mL volumetric flask, dilute to volume with methanol and mix well. Filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-0.2% phosphoric acid (25:75)
- Detector wavelength: 278 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Qinglin Granules (*Qinglin Keli*) – 清淋颗粒

Sample source

Commercially available Qinglin Granules

Chemical reference substances

Geniposide (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110749-200309)

Preparation of test solution

Grind a quantity of the granules to a fine powder, accurately weigh 0.25 g in a stoppered conical flask. Accurately add 25 mL of methanol, stopper tightly, weigh and treat ultrasonically for 20 minutes. Allow to reach room temperature, weigh again and replenish the lost weight with methanol. Mix thoroughly, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 μ m (883975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-water (11:89)
- Detector wavelength: 238 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 μ L

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector

Qingning Pills (*Qingning Wan*) – 清宁丸

Sample source

Commercially available Qingning Pills

Chemical reference substances

1. Emodin, 2. Chrysophanol
(National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1. 110756-200210, 2. 110796-200309)

Preparation of test solution

Grind a quantity of the pills to a fine powder, accurately weigh 0.1 g in a conical flask, accurately add 25 mL of a mixture of hydrochloric acid and methanol (1:25) and weigh. Heat under reflux on a water bath for 2 hours, allow to cool, and replenish the lost weight with a mixture of hydrochloric acid and methanol (1:25). Mix well and filter. Accurately measure 5 mL of the filtrate in an evaporating dish, evaporate to dryness. Dissolve the residue in a quantity of methanol, transfer to a 5 mL volumetric flask, dilute to volume with methanol, mix well, filter through a millipore membrane (0.45 µm), and use the filtrate as the test solution.

Chromatographic conditions

- Column: Agilent TC-C18, 4.6×250 mm, 5 µm (518925-902)
- Column temperature: 30 °C
- Mobile phase: methanol-0.1% phosphoric acid (85:15)
- Detector wavelength: 254 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Qingxuan Pills (*Qingxuan Wan*) – 清眩丸

Sample source

Commercially available Qingxuan Pills

Chemical reference substances

Imperatorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110826-200307)

Preparation of test solution

Cut a quantity of pills into pieces, accurately weigh about 1 g in a stoppered conical flask. Accurately add 25 mL of methanol, stopper tightly and weigh, treat ultrasonically for 45 minutes. Allow to cool, weigh again, replenish the lost weight with methanol, mix well and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C8 4.6×150 mm, 5 µm (993967-902)
- Column temperature: 40 °C
- Mobile phase: methanol-water (55:45)

Mile Swertia Tablets (*Tabellae Swertiae Mileensis*) – 青叶胆片

Sample source

Commercially available Mile Swertia Tablets

Chemical reference substances

Swertiamain (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0785-200203)

Preparation of test solution

Remove the coatings of 30 tablets, grind to a fine powder, accurately weigh about 12 powdered tablets in a 100 mL volumetric flask, add 80 mL of methanol, allow to soak for 20 minutes, treat ultrasonically for 15 minutes, allow to cool, add methanol to volume, mix well and filter. Discard the initial filtrate, and use the successive filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-0.3% formic acid (14:86)
- Detector wavelength: 237 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r
Swertiamain	12.499	20.249	32.66	1115.1	8189	1.02

Qingyin Pills (*Qingyin Wan*) – 清音丸

Sample source

Commercially available Qingyin Pills

Chemical reference substances

Puerarin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110752-200209)

Preparation of test solution

Cut the pills into pieces, accurately weigh 1 g, grind with 0.5 g of kieselguhr, accurately add 10 mL of acetyl acetate, stopper tightly, and weigh. Treat ultrasonically for 30 minutes, allow to cool, weigh again, replenish the lost weight with acetyl acetate, shake well, centrifuge, filter the supernatant, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 μ m (880975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.5% acetic acid (22:78)
- Detector wavelength: 250 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 μ L

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r
Puerarin	7.307	20.768	35.20	1078.0	10665	1.02

Reyanning Granules (*Reyanning Keli*) – 热炎宁颗粒

Sample source

Commercially available Reyanning Granules

Chemical reference substances

Emodin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110756-200210)

Preparation of test solution

Grind the contents to a fine powder. Accurately weigh 2 g of the powder in a 50 mL stoppered conical flask, accurately add 25 mL of methanol, weigh. Treat ultrasonically for 30 minutes, allow to cool, and weigh again. Replenish the lost weight with methanol, mix well, and filter. Accurately measure 10 mL of the filtrate in a 50 mL round-bottom flask, evaporate the methanol in vacuum, add 10 mL of 2.5 mol/L solution of sulfuric acid, and treat ultrasonically for 5 minutes. Add 10 mL of chloroform, heat under reflux for 1 hour, cool, transfer to a separating funnel, wash the container with a quantity of chloroform, combine the washings in the same separating funnel, separate the chloroform layer, extract the water layer with two 10 mL quantities of chloroform, and combine the chloroform solutions. Dehydrate with a quantity of anhydrous sodium sulfate, wash the container and the filter paper with a quantity of chloroform, combine the washings with the chloroform extracts, and evaporate the chloroform in vacuum. Dissolve the residue in 10 mL of methanol, measured accurately, weigh, slightly heat in a water bath, allow to cool, and weigh again. Replenish the lost weight with methanol, mix well, and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: Hypersil ODS 4.6×250 mm, 5 μm (7991618-584)
- Column temperature: 26 °C
- Mobile phase: methanol-0.1% phosphoric acid (85:15)
- Detector wavelength: 254 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 μL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Renqing Mangjue Pills (*Renqing Mangjue*) – 仁青芒觉

Sample source

Commercially available Renqing Mangjue Pills

Chemical reference substances

Strychnine (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110705-200205)

Preparation of test solution

Accurately weigh 0.9 g of the powder in a stoppered conical flask, accurately add 50 mL of chloroform and 2 mL of concentrated ammonia TS, stopper tightly, and shake gently. Weigh, allow to stand for 24 hours, weigh again, replenish the lost weight with chloroform, mix well, and filter. Accurately measure 20 mL of the filtrate in a separating funnel, extract by shaking with five 20 mL quantities of sulfuric acid solution (3:100). Combine the extracts, adjust pH value to 9-10 with concentrated ammonia TS, extract with five 20 mL quantities of chloroform, combine the chloroform extracts, and evaporate to dryness in vacuum. Dissolve the residue in mobile phase, transfer to a 10 mL volumetric flask, dilute to volume and mix well. Filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.01mol/L potassium dihydrogen phosphate (27:73) (pH 2.15)
- Detector wavelength: 254nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Ginseng (*Radix et Rhizoma Ginseng*) – 人參

Sample source

Commercially available Ginseng

Chemical reference substances

1. Ginsenoside Rb1, 2. Ginsenoside Rg1, 3. Ginsenoside Re (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 2. 110703-200322, 3. 0754-9912)

Preparation of test solution

Accurately weigh 1 g of the powder in a Soxhlet extractor, add a quantity of chloroform, heat under reflux on a water bath for 3 hours, discard the chloroform solution, evaporate the solvent from the residue. Transfer the residue with the extractor to a 100 mL conical flask. Accurately add 50 mL n-butanol saturated with water, stopper tightly, allow to stand overnight, treat ultrasonically for 30 minutes and filter. Evaporate accurately 25 mL of the filtrate to dryness in an evaporating dish, dissolve the residue in methanol, transfer to a 5 mL volumetric flask, dilute with methanol to volume and mix well. Filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)

Renshen Jianpi Pills (*Renshen Jianpi Wan*) – 人參健脾丸

Sample source

Commercially available Renshen Jianpi Pills

Chemical reference substances

hesperidin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110721-200211)

Preparation of test solution

Cut a quantity of the pills into pieces, accurately weigh about 6 g, grind well with 6 g of kieselguhr to form a flake and cut into pieces. Transfer to a Soxhlet extractor, heat under reflux with 80 mL of petroleum ether (60-90 °C) for 3 hours. Discard the petroleum ether extract, evaporate the remaining solvent in the residue, add 80 mL of methanol, heat under reflux for 5 hours, allow to cool and filter. Transfer the filtrate to a 100 mL volumetric flask, wash the container with small quantities of methanol several times, filter the washings into the same flask, dilute with methanol to volume, and mix well as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water-acetic acid (35:61:4)
- Detector wavelength: 284 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r

Renshen Yangrong Pills (*Renshen Yangrong Wan*) – 人參養榮丸

Sample source

Commercially available Renshen Yangrong Pills

Chemical reference substances

Hesperidin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110721-200211)

Preparation of test solution

Cut the pills into pieces, accurately weigh 0.8 g in a stoppered conical flask, accurately add 50 mL of methanol, stopper tightly and weigh. Treat ultrasonically for 60 minutes, allow to cool, weigh again, replenish the lost weight with methanol, shake well, and filter through a millipore membrane (0.45 µm), use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.11% acetic acid (40:60)
- Detector wavelength: 238 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector
- System control through Agilent ChemStation revision B.01.01

Renshen Zaizao Pills (*Renshen Zaizao Wan*) – 人参再造丸

Sample source

Commercially available Renshen Zaizao Pills

Chemical reference substances

Berberine hydrochloride (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110713-200208)

Preparation of test solution

Cut the pills into pieces, mix well, accurately weigh 5 g in a stoppered conical flask, accurately add 50 mL of a mixture of hydrochloric acid and methanol (1:100), stopper tightly and weigh. Treat ultrasonically for 30 minutes, allow to cool, weigh again, replenish the lost weight with a mixture of hydrochloric acid and methanol (1:100), shake well and filter. Accurately measure 25 mL of the filtrate, concentrate to about 10 mL, and apply to a neutral alumina column. Elute with 25 mL of ethanol, and collect the eluent in a 50 mL volumetric flask, dilute with ethanol to volume, shake well, filter through a millipore membrane (0.45 μm) and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18 4.6 \times 150 mm, 5 μm (993967-902)
- Column temperature: 25 $^{\circ}\text{C}$
- Mobile phase: acetonitrile-0.05 mol/L potassium dihydrogen phosphate (28:72)
- Detector wavelength: 345 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 μL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Honeysuckle Stem (*Caulis Lonicerae Japonicae*) – 忍冬藤

Sample source

Commercially available Honeysuckle Stem (Zhejiang)

Chemical reference substances

Chlorogenic acid (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110753-200212)

Preparation of test solution

Accurately weigh 0.4 g of the powder in a stoppered conical flask, accurately add 10 mL of 50 % methanol, weigh, treat ultrasonically for 30 minutes, allow to cool, weigh again, replenish the lost weight with 50 % methanol, mix well and filter.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: acetonitrile-0.4% phosphoric acid (10:90)
- Detector wavelength: 327 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Cistanche Herb (*Herba Cistanches*) – 肉苁蓉

Sample source

Commercially available Desert-living Cistanche

Chemical reference substances

Echinacoside (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 111670-200401)

Preparation of test solution

Accurately weigh 1 g of the powder in a 100 mL amber volumetric flask. Accurately add 50 % methanol, stopper tightly, weigh and allow to soak for 30 minutes. Treat ultrasonically for 50 minutes (below 50 °C), allow to cool, weigh again, replenish the lost weight with 50 % methanol, mix well and filter, and store the filtrate in an amber flask.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.1% formic acid (26:74)
- Detector wavelength: 330 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Cassia Bark (*Cortex Cinnamomi*) – 肉桂

Sample source

Commercially available Cassia Bark

Chemical reference substances

Cinnamic aldehyde (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110710-200212)

Preparation of test solution

Accurately weigh 0.5 g of the powder in a stoppered conical flask, accurately add 25 mL of methanol and weigh. Treat ultrasonically for 10 minutes, allow to stand overnight, treat ultrasonically for 10 minutes, weigh again, replenish the lost weight with methanol, mix well and filter. Accurately measure 1 mL of the filtrate in a 25 mL volumetric flask, add methanol to volume, and mix well.

Chromatographic conditions

- Column: ZORBAX XDB C18 4.6×250 mm, 5 µm (990967-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-water (38:72)

Ruyi Jinhuang Powder (*Ruyi Jinhuang San*) – 如意金黃散

Sample source

Commercially available Ruyi Jinhuang Powder

Chemical reference substances

curcumin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110823-9802)

Preparation of test solution

Accurately measure 0.25 g of the powder in a stoppered conical flask, accurately add 10 mL of methanol, stopper tightly and weigh. Allow to stand for 1 hour, weigh again, and replenish the lost weight with methanol, centrifuge, and use the supernatant as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-isopropanol-0.5% acetic acid (19:25:56)
- Detector wavelength: 430 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Rukuaixiao Tablets (*Rukuaixiao Pian*) – 乳块消片

Sample source

Commercially available Rukuaixiao Tablets

Chemical reference substances

sodium danshensu (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110855-200203)

Preparation of test solution

Remove the coatings from 10 tablets and weigh accurately. Grind to a fine powder, accurately weigh 0.15 g in a centrifugal tube, add 2 mL of water and 0.75 g of neutral alumina (100-200 mesh), and mix well. Wash with two 10 ml quantities of water, centrifuge, discard the washings, and extract by stirring with three 4 ml quantities of 5 % oxalic acid. Centrifuge, combine the oxalic acid solutions in a 25 mL volumetric flask, and dilute to volume with 5 % oxalic acid. Mix well and filter through a millipore membrane (0.45 µm), use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-methanol-1.45% glacial acetic acid (0.5:9:91)
- Detector wavelength: 280 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector
- System control through Agilent ChemStation revision B.01.01

Sanbao Capsules (*Sanbao Jiaonang*) – 三宝胶囊

Sample source

Commercially available Sanbao Capsules

Chemical reference substances

Protocatechuic aldehyde (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110810-200205)

Preparation of test solution

Accurately weigh the contents of 20 capsules, mix well, accurately weigh 0.8 g in a stoppered conical flask, accurately add 20 mL of methanol, weigh. Heat under reflux for 1 hour, allow to cool, weigh again, replenish the lost weight with methanol, shake well and filter. Accurately measure 10 mL of the filtrate and evaporate to dryness. Dissolve the residue in 10 mL of water and adjust pH to 2 with dilute hydrochloric acid TS, extract with four 10 mL quantities of ether, combine the ether extracts, evaporate the ether and dissolve the residue in methanol, transfer to a 10 mL volumetric flask, add methanol to volume, shake well, filter through a millipore membrane (0.45 μ m) and use the filtrate as the test solution.

Chromatographic conditions

- Column: Agilent TC-C18, 4.6 \times 250 mm, 5 μ m (518925-902)
- Column temperature: 25 $^{\circ}$ C
- Mobile phase: 0.1% acetic acid-methanol (87:13)
- Detector wavelength: 279 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 μ L

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Sanjin Tablets (*Sanjin Pian*) – 三金片

Sample source

Commercially available Sanjin Tablets

Chemical reference substances

Madecassoside (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 1110893-200201)

Preparation of test solution

Remove the coatings from 30 tablets and grind to a fine powder. Accurately weigh 1.5 g of the powder in a stoppered conical flask, accurately add 50 mL of methanol, weigh. Treat ultrasonically for 45 minutes, allow to cool, weigh again, replenish the lost weight with methanol, mix well and filter. Accurately measure 25 mL of the filtrate, evaporate to dryness, dissolve the residue in 20 mL of water, and extract with three 15 mL quantities of ammonia TS. Evaporate the n-butanol extracts to dryness, dissolve the residue in methanol and transfer to a 5 mL volumetric flask, dilute with methanol to volume, mix well.

Chromatographic conditions

- Column: ZORBAX Extend C18 4.6×250 mm, 5 µm (770450-902)
- Column temperature: 40 °C
- Mobile phase: methanol-water (48:52)
- Evaporator tube temperature: 80 °C, Nebulizing temperature: 50 °C, Air flow rate: 1.5 SLM
- Flow rate: 1.0 mL/min
- Injection volume: 20 µL

Sangju Ganmao Tablets (*Sangju Ganmao Pian*) – 桑菊感冒片

Sample source

Commercially available Sangju Ganmao Tablets

Chemical reference substances

forsythin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110821-200305)

Preparation of test solution

Weigh accurately 20 tablets, removed sugar coats, pulverize to fine powder. Weigh accurately 2 g of the powder in a stopper conical flask, add accurately 25 ml of methanol, stopper tightly and weigh, ultrasonicate for 30 minutes, allow to cool, weigh again, replenish the lost weight with methanol, mix well and filter. Exactly measure 5 ml of the successive filtrate, evaporate to dryness, dissolve the residue in 20 ml of water, extract with five 20-ml quantities of chloroform, combine the chloroform extracts, evaporate to dryness, dissolve the residue in 50% methanol, and transfer to a 5 ml volumetric flask, dilute with 50% methanol to volume, shake well. Centrifuge, use the supernatant as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 μ m (883975-902)

Asiatic Cornelian Cherry Fruit (*Fructus Corni*) – 山茱萸

Sample source

Commercially available Asiatic
Cornelian Cherry Fruit

Chemical reference substances

Loganin (National Institute for the
Control of Pharmaceutical and
Biological Products, Batch number
111640-200401)

Preparation of test solution

Accurately weigh 0.1 g of the
powder in a stoppered conical
flask, accurately add 25 mL of 80
% methanol and weigh, heat under
reflux for 1 hour, cool and weigh
accurately again, replenish the lost
solvent with 80 % methanol, mix
well and filter, and use the filtrate
as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18
4.6×150 mm, 5 µm (993967-902)

Shaoshangling Tincture (*Shaoshangling Ding*) – 烧伤灵酊

Sample source

Commercially available Shaoshangling Tincture

Chemical reference substances

Emodin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110756-200210)

Preparation of test solution

Accurately measure 2 mL of the tincture in an evaporating dish, add 1 g of silica gel (60-160 mesh), evaporate to dryness on a warm water bath. Apply to a column packed with dry silica gel (2 g, 15 mm in inner diameter), elute in vacuum with 90 mL of a mixture of petroleum ether (60-90 °C), formate acetate and formic acid (100:100:2), collect the eluent, evaporate to dry, dissolve the residue in a quantity of methanol. Transfer to a 100 mL volumetric flask, dilute with methanol to volume and mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.1% phosphoric acid (70:30)
- Detector wavelength: 254 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Common Cnidium Fruit (*Fructus Cnidii*) – 蛇床子

Sample source

Commercially available Common Cnidium Fruit (Zhejiang province)

Chemical reference substances

Osthole (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110822-200305)

Preparation of test solution

Accurately weigh 0.1 g of the powder in a stoppered conical flask, accurately add 25 mL of dehydrated ethanol, accurately weigh, allow to stand for 2 hours and treat ultrasonically for 30 minutes, allow to cool and weigh again, replenish the lost weight with dehydrated ethanol and mix well. Accurately measure 5 mL of the supernatant in a 10 mL volumetric flask, dilute with dehydrated ethanol to volume and mix well. Filter with a millipore membrane (0.45 μ m) and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6 \times 150 mm, 5 μ m (883975-902)
- Column temperature: 35 $^{\circ}$ C
- Mobile phase: acetonitrile-water (65:35)
- Detector wavelength: 322 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 μ L

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Blackberrylily Rhizome (*Rhizoma Belamcandae*) – 射干

Sample source

Commercially available Blackberrylily Rhizome

Chemical reference substances

Irisfloreantin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 1557-200101)

Preparation of test solution

Accurately weigh 0.2 g of the powder in a stoppered conical flask, accurately add 50 mL of methanol and weigh. Heat under reflux for 1 hour, allow to cool and weigh again, replenish the lost weight with methanol, mix well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-0.2%phosphoric acid (52:48)
- Detector wavelength: 266 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Shenjing Zhike Pills (*Shenjing Zhike Wan*) – 参精止渴丸

Sample source

Commercially available Shenjing Zhike Pills

Chemical reference substances

Puerarin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110752-200209)

Preparation of test solution

Grind the pills to a fine powder, accurately weigh 1.1 g of the powder in a Soxhlet extractor, add a quantity of ether, heat under reflux for 1 hour. Discard the ether extract and evaporate the remaining solvent in the residue, add a quantity of methanol, heat under reflux for 3 hours. Transfer the extract, concentrate when necessary, to a 50 mL volumetric flask, dilute with methanol to volume and mix thoroughly.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 μ m (880975-902)
- Column temperature: 40 °C
- Mobile phase: methanol-25 mmol/L phosphoric acid (containing 0.18 % triethylamine) (20:80)
- Detector wavelength: 250 nm
- Flow rate: 1.0 mL/min
- Inject volume: 2 μ L

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Shenqi Wuweizi Tablets (*Shenqi Wuweizi Pian*) – 参芪五味子片

Sample source

Commercially available Shenqi Wuweizi Tablets

Chemical reference substances

Schisandrin A (National Institute for the Control of Pharmaceutical and Biological Products, Batch number (0764-200005))

Preparation of test solution

Remove the coatings from 20 tablets, grind to a fine powder. Accurately weigh 1 g in a stoppered conical flask, accurately add 25 mL of methanol, stopper tightly, and weigh. Treat ultrasonically for 20 minutes, allow to cool, weigh again, replenish the lost weight with methanol, mix well, centrifuge, and use the supernatant as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-water-acetic acid (64:35:1)
- Detector wavelength: 249 nm
- Flow rate: 1.0 mL/min
- Inject volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Shensu Pills (*Shensu Wan*) – 参苏丸

Sample source

Commercially available Shensu Pills

Chemical reference substances

Puerarin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110752-200209)

Preparation of test solution

Grind the pills to a fine powder, accurately weigh 2 g in a stoppered conical flask, accurately add 25 mL of dilute ethanol TS, stopper tightly and weigh. Treat ultrasonically for 30 minutes, allow to cool, weigh again, replenish the lost weight with dilute ethanol TS. Filter the supernatant and use the filtrate as the test solution..

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water (17:83)
- Detector wavelength: 250 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Shengxue Pills (*Shengxue Wan*) – 生血丸

Sample source

Commercially available Shengxue Pills

Chemical reference substances

Berberine hydrochloride (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110713-200208)

Preparation of test solution

Grind the pills to a fine powder, accurately weigh 3 g of the powder in a Soxhlet extractor, add 40 mL of a mixture of methanol and hydrochloric acid (100:1), allow to soak overnight, add a quantity of methano, and heat under reflux until the extract is colorless. Allow to cool, concentrate the methanol extracts and transfer to a 50 mL volumetric flask, add methanol to volume, mix well and filter. Use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18 4.6×250 mm, 5 µm (990967-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-(5 mmol/L sodium dihydrogen phosphate and 17 % sodium dodecylsulfonate) (50:50)
- Detector wavelength: 345 nm
- Flow rate: 1.0 mL/min
- Inject volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Berberine	3.380	10.95	43.43	709.0	10231	1.03

Shiquan Dabu Pills (*Shiquan Dabu Wan*) – 十全大补丸

Sample source

Commercially available Shiquan Dabu Pills

Chemical reference substances

Paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110736-200220)

Preparation of test solution

Grind the pills to a fine powder, accurately weigh 1.0 g of the powder in a stoppered conical flask, accurately add 25 mL of dilute ethanol TS, stopper tightly and weigh. Treat ultrasonically for 60 minutes, allow to cool, weigh again, replenish the lost weight with dilute ethanol TS, mix well and centrifuge. Use the filtrate of the supernatant as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: acetonitrile-water (16:84)
- Detector wavelength: 230 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Paeoniflorin		5.515	19.95	1200.4	7287	0.97

Shearer's Pyrrosia Leaf (*Folium Pyrrosiae*) – 石 韦

Sample source

Commercially available Shearer's Pyrrosia Leaf (Anhui)

Chemical reference substances

Chlorogenic acid (National Institute for the Control of Pharmaceutical and Biological Products, Batch number :110753-200212)

Preparation of test solution

Accurately weigh 0.08 g of the powder in a stoppered conical flask, accurately add 10 mL of 50 % methanol, weigh, treat ultrasonicate for 45 minutes, allow to cool, weigh again, compensate the lost weight with 50 % methanol, mix well, filter, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: acetonitrile-0.1 % phosphoric acid (11:89)
- Detector wavelength: 326 nm
- Flow rate: 1.0 mL/min
- Inject volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Chlorogenic acid	4.012	6.015	151.48	1525.9	8485	0.96

Shugan Hewei Pills (*Shugan Hewei Wan*) – 舒肝和胃丸

Sample source

Commercially available Shugan Hewei Pills

Chemical reference substances

Paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110736-200220)

Preparation of test solution

Cut the pills into pieces. Accurately weigh 0.75 g in a stoppered conical flask, accurately add 25 mL of dilute ethanol TS, stopper tightly, weigh and treat ultrasonically for 30 minutes. Allow to cool, weigh again and replenish the lost weight with dilute ethanol TS, mix well, centrifuge and filter the supernatant, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.05 mol/L potassium dihydrogen phosphate (14:86)
- Detector wavelength: 230 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r

Shugan Pills (*Shugan Wan*) – 舒肝丸

Sample source

Commercially available Shugan Pills

Chemical reference substances

Paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110736-200220)

Preparation of test solution

Grind the pills to a fine powder, accurately weigh 1 g, in a stoppered conical flask, accurately add 50 mL of dilute ethanol TS, stopper tightly, weigh and treat ultrasonically for 45 minutes. Allow to cool, weigh again and replenish the lost weight with dilute ethanol TS, mix well and filter. Accurately measure 5 mL of the filtrate and evaporate to dryness, dissolve the residue in 5 mL of water and apply to a GDX-201 macroporous resin column (1.0 cm in inner diameter and 12 cm in length). Elute with 100 mL of 30 % methanol, and collect the eluents. Evaporate to dryness, dissolve the residue in methanol, transfer to a 5 mL volumetric flask, dilute with methanol to volume, mix well and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-phosphate BS (0.05 mol/L disodium hydrogen phosphate:0.05 mol/L sodium dihydrogen phosphate = 1:5) (20:80)
- Detector wavelength: 230 nm
- Flow rate: 1.0 mL/min
- Inject volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Shuanghuanglian Granules (*Shuanghuanglian Keli*) – 双黄连颗粒

Sample source

Commercially available Shuanghuanglian Granules

Chemical reference substances

Baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 0715-200212)

Preparation of test solution

Grind the granules to a fine powder. Accurately weigh 0.5 g in a 50 mL volumetric flask, add a quantity of 50 % methanol, treat ultrasonically for 20 minutes, allow to reach room temperature, dilute with 50 % methanol to volume, shake well, filter. Accurately measure 2 mL of the filtrate in a 10 mL volumetric flask, dilute with 50 % methanol to volume and mix well. Filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18 4.6×150 mm, 5 µm (993967-902)
- Column temperature: 25 °C
- Mobile phase: methanol-2 % glacial acetic acid (50:50)
- Detector wavelength: 274 nm
- Flow rate: 1.0 mL/min

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Silybum Marianum Fruit (*Fructus Silybi*) – 水飞蓟

Sample source

Commercially available Fruit of Silybum Marianum

Chemical reference substances

Silybin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110856-200203)

Preparation of test solution

Accurately weigh 0.5 g of the powder in a stoppered conical flask, accurately add 50 mL of 75 % methanol, weigh and heat under reflux on a water bath for 30 minutes, allow to cool, weigh again and replenish the lost weight with 75 % methanol, mix well and allow to stand. Filter, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water-glacial acetic acid (48:52:1)

Sishen Pills (*Sishen Wan*) – 四神丸

Sample source

Commercially available Sishen Pills

Chemical reference substances

1. Psoralen, 2. Isopsoralen (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 1. 110739-200309, 2. 110738-200309)

Preparation of test solution

Grind the pills to a fine powder, accurately weigh 1 g in a stoppered conical flask, accurately add 100 mL of 70 % methanol, stopper tightly, and weigh. Treat ultrasonically for 20 minutes, allow to cool, weigh again, replenish the lost weight with 70 % methanol, mix well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18 4.6×250 mm, 5 µm (990967-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-water (33:67)
- Detector wavelength: 245 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector
- System control through Agilent ChemStation revision B.01.01

Siwu Mixture (*Siwu Heji*) – 四物合剂

Sample source

Commercially available Siwu Mixture

Chemical reference substances

Paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 0736-200220)

Preparation of test solution

Mix the mixture well, accurately measure 0.4 mL of the mixture in a 10 mL volumetric flask, dilute with water to volume, shake well, and filter.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-isopropanol-acetic acid-water (25:2:2:71)
- Detector wavelength: 230 nm
- Flow rate: 1.0 mL/min
- Inject volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Sizheng Pills (*Sizheng Wan*) – 四正丸

Sample source

Commercially available Sizheng Pills

Chemical reference substances

Hesperidin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110721-200211)

Preparation of test solution

Cut the pills into pieces, accurately weigh 2 g in a stoppered conical flask, accurately add 50 mL of methanol, stopper tightly and weigh, treat ultrasonically for 45 minutes. Allow to cool, weigh again, replenish the lost weight with methanol, mix well, filter through a millipore membrane (0.45 µm) and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 40 °C
- Mobile phase: methanol-0.5% acetic acid (39:61)
- Detector wavelength: 283 nm
- Flow rate: 1.0 mL/min
- Inject volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector

Songling Xuemaikang Capsules (*Songling Xuemaikang Jiaonang*)

松龄血脉康胶囊

Sample source

Commercially available Songling Xuemaikang Capsules

Chemical reference substances

Puerarin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110752-200209)

Preparation of test solution

Accurately weigh about 0.15 g of the mixed contents in a stoppered conical flask, accurately add 50 mL of 50 % ethanol, stopper tightly, weigh and treat ultrasonically for 30 minutes, allow to cool, weigh again, replenish the lost weight with 50 % ethanol, mix well and filter through a millipore membrane (0.45 μ m), use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6 \times 250 mm, 5 μ m (880975-902)
- Column temperature: 25 $^{\circ}$ C
- Mobile phase: methanol-4 % acetic acid (20:80)
- Detector wavelength: 250 nm
- Flow rate: 1.0 mL/min
- Inject volume: 5 μ L

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Buckeye Seed (*Semen Aesculi*) – 娑罗子

Sample source

Commercially available Buckeye Seed

Chemical reference substances

Sodium aescine (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 10346-0001)

Preparation of test solution

Accurately weigh 1 g of the powder in a Soxhlet extractor, heat under reflux in ether for 1 hour, then discard ether, and evaporate the ether to dryness. Transfer the residue and extractor to a stoppered conical flask, accurately add 50 mL of methanol, weigh, and treat ultrasonically for 30 minutes, allow to cool and weigh again, replenish the lost solvent with methanol and mix well, filter. Accurately measure 25 mL of the filtrate in an evaporating dish. Heat on a water bath at 40 °C and concentrate to suitable volume, transfer to a 10 mL volumetric flask, add methanol to volume, and mix well. Filter through millipore membrane (0.45 µm), and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-0.2% phosphoric acid (37:63)
- Detector wavelength: 220 nm
- Flow rate: 1.0 mL/min
- Inject volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Tiaojing Cuyun Pills (*Tiaojing Cuyun Wan*) – 调经促孕丸

Sample source

Commercially available Tiaojing Cuyun Pills

Chemical reference substances

paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110736-200220)

Preparation of test solution

Grind the pills to fine powder, accurately weigh 1.5 g in a Soxhlet extractor, add a quantity of ether, heat under reflux for 3 hours, discard the ether extract and evaporate the remaining solvent in the residue. Put the residue and the extractor in a stoppered conical flask, accurately add 50 mL of methanol, stopper tightly, and weigh accurately. Treat ultrasonically for 30 minutes, allow to cool, weigh again, replenish the lost weight with methanol, shake well and filter. Accurately measure 25 mL of the filtrate, and evaporate to dryness. Dissolve the residue in a quantity of water, apply to a D 101 macroporous resin column (1.5 cm in inner diameter, 12 cm in length), elute with water until the eluent is colorless, and then elute with 50 % ethanol. Discard the initial eluent, collect 100 mL of the successive eluent, evaporate to dryness, dissolve the residue in a quantity of methanol, transfer to a 25 mL volumetric flask, dilute with methanol to volume, and shake well. Filter through a millipore membrane (0.45 μm) and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6 \times 150 mm, 5 μm (883975-902)
- Column temperature: 35 $^{\circ}\text{C}$
- Mobile phase: methanol-water (26:74)
- Detector wavelength: 230 nm
- Flow rate: 1.0 mL/min
- Inject volume: 5 μL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Tongtian Mixture (*Tongtian Koufuye*) – 通天口服液

Sample source

Commercially available Tongtian Mixture

Chemical reference substances

paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110736-200220)

Preparation of test solution

Accurately measure 2 mL of the mixture in a 25 mL volumetric flask, dilute with 50 % ethanol to volume and mix well. Centrifuge, use the supernatant as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-water (30:70)
- Detector wavelength: 230 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Tongxinluo Capsules (*Tongxinluo Jiaonang*) – 通心络胶囊

Sample source

Commercially available Tongxinluo Capsules

Chemical reference substances

paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110736-200220)

Preparation of test solution

Grind the contents of the capsules to a fine powder, accurately weigh 0.1 g in a stoppered conical flask, add 10 mL of 70 % methanol, stopper tightly, weigh and treat ultrasonically for 50 minutes, allow to cool, weigh again, replenish the lost weight with methanol, shake well, and filter. Accurately measure 4 mL of the filtrate in a 10 mL volumetric flask, dilute with 70 % methanol to volume, shake well, filter through a millipore membrane (0.45 μ m) and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6 \times 150 mm, 5 μ m (883975-902)
- Column temperature: 35 $^{\circ}$ C
- Mobile phase: acetonitrile-water (12:88)
- Detector wavelength: 230 nm
- Flow rate: 1.0 mL/min

Tongxuan Lifei Pills (*Tongxuan Lifei Wan*) – 通宣理肺丸

Sample source

Commercially available Tongxuan Lifei Pills

Chemical reference substances

ephedrin hydrochloride (National Institute for the Control of Pharmaceutical and Biological Products)

Preparation of test solution

Grind the pills to fine powder, accurately weigh 2 g in a Soxhlet extractor, add 3 mL of concentrated ammonia TS, 10 mL of ethanol, and a quantity of ether, extract under reflux until the extract is colorless. Transfer the ether extract to an evaporating dish, wash the extractor and apparatus with ether, combine ether washings in the evaporating dish, and evaporate the ether. Dissolve the residue in a solution of hydrochloric acid in methanol (1:1000), and transfer to a 10 mL of volumetric flask, add a solution of hydrochloric acid in methanol (1:1000) to volume, mix well and filter, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX Bonus-RP 4.6×250 mm, 5 µm (880668-901)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-20 mmol/L potassium dihydrogen phosphate (pH 2.7) (3:97)
- Detector wavelength: 210 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Golden Larch Bark (*Cortex Pseudolaricis*) – 土荆皮

Sample source

Commercially available Golden Larch Bark

Chemical reference substances

pseudolaric acid (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110880-200202)

Preparation of test solution

Accurately weigh 0.2 g of the powder in a stopper conical flask, accurately add 25 mL of methanol, weigh, heat on a water bath for 1 hour, allow to cool, weigh again, replenish the lost weight with methanol, mix well, filter, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C8 4.6×150 mm, 5 µm (993967-906)
- Column temperature: 25 °C
- Mobile phase: methanol-1% glacial acetic acid (52:48)
- Detector wavelength: 260 nm
- Flow rate: 1.0 mL/min
- Inject volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Fimbriate Orostachys Herb (*Herba Orostachyis Fimbriati*) – 瓦松

Sample source

Commercially available Fimbriate Orostachys Herb

Chemical reference substances

1. Quercetin, 2. Kaempferol (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 1. 0081-9905, 2. 0864-9901)

Preparation of test solution

Accurately weigh 1 g of the fine powder in a stoppered conical flask, accurately add 50 mL of a mixture of methanol and 25 % hydrochloric acid solution (4:1), weigh, heat on a water bath for 1 hour, cool immediately, weigh again, replenish the lost weight with methanol, mix well, filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.5% phosphoric acid (46:54)
- Detector wavelength: 360 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Wanying Capsules (*Wanying Jiaonang*) – 万应胶囊

Sample source

Commercially available Wanying Capsules

Chemical reference substances

berberine hydrochloride (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110713-200208)

Preparation of test solution

Grind the contents of the capsules to fine powder, accurately weigh 0.3 g. Add 30 mL of a mixture of hydrochloric acid and 70 % ethanol (1:100), heat under reflux for 1 hour, allow to cool, filter, and transfer the filtrate to a 50 mL volumetric flask. Wash the container and the residue with a mixture of hydrochloric acid and 70 % ethanol (1:100) several times, combine the washings in the same flask, and dilute to volume with a mixture of hydrochloric acid and 70 % ethanol (1:100). Mix well, centrifuge, accurately measure 1 mL of the supernatant in a 10 mL volumetric flask, dilute to volume with the mobile phase, and shake well.

Chromatographic conditions

- Column: Reprosil Pur C18, 4.0×150 mm, 5 µm
- Column temperature: 25 °C
- Mobile phase: acetonitrile-33 mmol/L potassium dihydrogen phosphate (30:70)
- Detector wavelength: 265nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Weikangling Capsules (*Weikangling Jiaonang*) – 胃康灵胶囊

Sample source

Commercially available Weikangling Capsules

Chemical reference substances

paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110736-200220)

Preparation of test solution

Accurately weigh 0.3 g of the contents in a stoppered conical flask, accurately add 25 mL of dilute ethanol TS, stopper tightly and weigh. Treat ultrasonically for 30 minutes, allow to cool, weigh again, replenish the lost weight with dilute ethanol TS and mix well. Filter, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.2 mol/L ammonium acetate- glacial acetic acid (15:85)
- Detector wavelength: 230 nm
- Flow rate: 1.0 mL/min
- Inject volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Weishuning Granules (*Weishuning Keli*) – 胃舒宁颗粒

Sample source

Commercially available Weishuning Granules

Chemical reference substances

ammonium glycyrrhizinate (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 0731-9704)

Preparation of test solution

Grind a quantity of granules to a fine powder and mix thoroughly, accurately weigh 0.3 g in a stoppered conical flask, accurately add 25 mL of a mixture of methanol and 0.017 mol/L solution of phosphoric acid (65:35), stopper tightly and weigh, allow to soak for 1 hour, treat ultrasonically for 30 minutes, allow to cool, weigh again, replenish the lost the weight with the above mixture and mix well. Filter through a millipore membrane (0.45 µm), and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-0.2 % phosphoric acid (33:67)
- Detector wavelength: 250 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Wuji Baifeng Pills (*Wuji Baifeng Wan*) – 乌鸡白凤丸

Sample source

Commercially available Wuji Baifeng Pills

Chemical reference substances

paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110736-200220)

Preparation of test solution

Grind the pills to a fine powder, accurately weigh 2 g, accurately add 10 mL of 30 % ethanol, weigh, shake at intervals, allow to stand for 24 hours, treat ultrasonically for 30 minutes, allow to cool, weigh again, replenish the lost weight with 30 % ethanol, mix well and filter. Accurately measure 5 mL of the filtrate, apply to the column (1.5 cm in internal diameter; 12 cm in height) packed with D 101 macroporous adsorptive resins. Elute with 100 mL of 30 % ethanol, collect the eluent, evaporate to dryness, dissolve the residue in several 5 mL portions of water, transfer to a 25 mL volumetric flask, wash the containers with methanol several times in the same volumetric flask, dilute with methanol to volume and mix well. Filter through a millipore membrane (0.45 μm), and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6 \times 150 mm, 5 μm (883975-902)

American Ginseng (*Radix Panacis Quinquefolii*) – 西洋参

Sample source

Commercially available American Ginseng

Chemical reference substances

1. Ginsenoside Rb1, 2. Ginsenoside Rg1, 3. Ginsenoside Re (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 2. 110703-200322 3. 0754-9912)

Preparation of test solution

Accurately weigh 1 g of the powder in a stoppered conical flask, accurately add 50 mL of n-butanol saturated with water and weigh. Heat under reflux on a water bath for 1.5 hours, allow to cool and weigh again, replenish the lost solvent with n-butanol saturated with water, mix well and filter. Evaporate accurately 25 mL of the filtrate to dryness in an evaporating dish, dissolve the residue in 50 % methanol, transfer to a 10 mL volumetric flask, dilute with 50 % methanol to volume and mix well. Filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 40 °C
- Mobile phase: A: 0.1 % phosphoric acid, B: acetonitrile; 0-15 min, 19-20 %; 15-30 min, 20-35 %; 30-35 min, 35-55 %; 35-45 min, 55-60 %
- Detector wavelength: 203 nm
- Flow rate: 1.0 mL/min
- Inject volume: 3 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector
- System control through Agilent ChemStation revision B.01.01

Common Self-heal Fruit-Spike (*Spica Prunellae*) – 夏枯草

Sample source

Commercially available Common Selfheal Fruit-Spike

Chemical reference substances

Ursolic acid (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 10742-200212)

Preparation of test solution

Accurately weigh 2 g of the powder in a Soxhlet extractor, add a quantity of ether and soak overnight, heat under reflux for 6 hours, evaporate the solvent. Dissolve the residue in anhydrous ethanol, transfer to a 10 mL volumetric flask, and dilute to volume with anhydrous ethanol. Measure accurately 1 mL to a 10 mL volumetric flask, dilute with anhydrous ethanol to volume and mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 50 °C
- Mobile phase: acetonitrile-1.4 % phosphoric acid (72:28)
- Detector wavelength: 210 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Ursolic acid	6.249	18.123	13.77	298.4	16225	0.95

Xiatianwu Tablets (*Xiatianwu Pian*) – 夏天无片

Sample source

Commercially available Xiatianwu Tablets

Chemical reference substances

Protopine (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110853-200201)

Preparation of test solution

Remove the coatings of 10 tablets and grind to a fine powder, accurately weigh 0.6 g in a stoppered conical flask, accurately add 50 mL of 50 % methanol, and weigh. Heat under reflux for 1 hour, allow to cool, weigh again, replenish the lost weight with 50 % methanol, and mix well. Filter, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-water (containing 3 % glacial acetic acid and 0.8 % triethylamine) (21:79)
- Detector wavelength: 289nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector
- System control through Agilent ChemStation revision B.01.01

Decumbent Corydalis Rhizome (*Rhizoma Corydalis Decumbentis*)

仙 茅

Sample source

Commercially available Decumbent Corydalis Rhizome

Chemical reference substances

Curculigoside (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110771-200203)

Preparation of test solution

Accurately weigh 1 g of the powder in a stoppered conical flask, accurately add 50 mL of methanol and weigh. Heat under reflux for 2 hours, allow to cool, and weigh again, replenish the lost weight with methanol, mix well and filter. Evaporate accurately 20 mL of the filtrate to dryness, dissolve the residue in methanol, transfer to a 10 mL volumetric flask, dilute with methanol to volume and mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-0.1 % phosphoric acid (20:80)
- Detector wavelength: 285 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r
Curculigoside	7.817	10.580	9.57	154.0	9927	0.98

Xiangsha Liujun Pills (*Xiangsha Liujun Wan*) – 香砂六君丸

Sample source

Commercially available Xiangsha Liujun Pills

Chemical reference substances

Hesperidin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110721-200211)

Preparation of test solution

Accurately weigh 10 g of the pills, grind to a fine powder, accurately weigh 0.25 g in a 25 mL volumetric flask, add a quantity of methanol, allow to stand for 2 hours, treat ultrasonically for 1 hour, allow to cool, dilute with methanol to volume, shake well. Filter through a millipore membrane (0.45 µm), use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-0.2% phosphoric acid (26:74)
- Detector wavelength: 284 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector
- System control through Agilent ChemStation revision B.01.01

Xiangsha Yangwei Pills (*Xiangsha Yangwei Wan*) – 香砂养胃丸

Sample source

Commercially available Xiangsha Yangwei Pills

Chemical reference substances

1. Magnolol, 2. Honokiol (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 1.0729-200308, 2.730-9204)

Preparation of test solution

Grind a quantity of the pills to a fine powder, accurately weigh 2.5 g of the powder in a Soxhlet extractor, heat under reflux with a quantity of methanol for 3 hours and evaporate the extract to dryness. Dissolve the residue in methanol, transfer to a 25 mL volumetric flask, dilute with methanol to volume. Mix well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water-glacial acetic acid (60:38:2)
- Detector wavelength: 294 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector

Xiangsha Zhizhu Pills (*Xiangsha Zhizhu Wan*) – 香砂枳术丸

Sample source

Commercially available Xiangsha Zhizhu Pills

Chemical reference substances

Hesperidin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110721-200211)

Preparation of test solution

Grind a quantity of the pills to a fine powder, accurately weigh 0.3 g, accurately add 50 mL of methanol, heat under reflux on a water bath for 1 hour, allow to cool, weigh again, replenish the lost weight with methanol, mix well, filter. Accurately measure 5 mL of the filtrate in a 25 mL volumetric flask, dilute with methanol to volume, and mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 20 °C
- Mobile phase: acetonitrile-0.3 % phosphoric acid (20:80)
- Detector wavelength: 283 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector

Hesperidin	5.056	15.14	29.96	594.8	13803	1.04

Dahurian Rhododendron Syrup (*Syrups Rhododendri Daurici*)

消咳喘糖浆

Sample source

Commercially available Dahurian Rhododendron Syrup

Chemical reference substances

Farrerol (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110850-200203)

Preparation of test solution

Accurately measure 1.0 mL of the syrup in a 10 mL volumetric flask, dilute with methanol to volume, mix well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-water (60:40)
- Detector wavelength: 295 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Components	k'	Ret Time (min)	Height (mAU)	Area (mAU*s)	n	USP T _r
Farrerol	4.815	6.978	15.94	181.6	9002	0.96

Xiaomi Suppositories (*Xiaomi Shuan*) – 消糜栓

Sample source

Commercially available Xiaomi Suppositories

Chemical reference substances

Ginsenoside Re (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 0754-9912)

Preparation of test solution

Cut the suppositories into pieces. Accurately weight 3.0 g of the pieces in a stoppered conical flask. Accurately add 50 mL of n-butanol saturated with water and weigh. Heat under reflux for 1 hour, allow to cool. Weigh again and replenish the lost weight with above solution, mix well and filter. Accurately measure 25 mL of the filtrate in a separator funnel, wash with two 25 mL quantities of ammonia TS saturated with n-butanol and then wash with 25 mL of water saturated with n-butanol. Evaporate the n-butanol extract to dryness, dissolve the residue in an appropriate amount of methanol, and transfer to a 5 mL volumetric flask. Dilute with methanol to volume, mix well, allow to stand for 15 minutes below 0 °C, filter immediately. Use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18 4.6×150 mm, 5 µm (993967-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-0.05 % phosphoric acid (20:80)
- Detector wavelength: 203 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Ginsenoside Re		19.834	11.31	372.5	8392	0.98

Xiaoshuan Tongluo Capsules (*Xiaoshuan Tongluo Jiaonang*)

消栓通络胶囊

Sample source

Commercially available Xiaoshuan Tongluo Capsules

Chemical reference substances

Ginsenoside Rg1 (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110703-200322)

Preparation of test solution

Grind the contents of the capsules to a fine powder. Accurately weigh 2 g of the powder in a stoppered conical flask, accurately add 50 mL of methanol, weigh, heat under reflux for 2 hours, allow to cool and weigh again. Replenish the lost weight with methanol, mix well, and filter. Accurately measure 25 mL of the filtrate and evaporate to dryness. Dissolve the residue in 30 mL of water, extract with two 20 mL quantities of ether, discard the ether extract, extract with four 20 mL quantities of n-butanol saturated with water, combine the n-butanol extracts, wash with two 30 mL quantities of ammonia TS, and wash with two 20 mL quantities of water saturated with n-butanol. Evaporate n-butanol to dryness, dissolve the residue with methanol in a 10 mL volumetric flask, dilute with methanol to volume, mix well, filter through a millipore membrane (0.45 μm), use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18 4.6 \times 150 mm, 5 μm (993967-902)
- Column temperature: 25 $^{\circ}\text{C}$
- Mobile phase: acetonitrile-0.05 % phosphoric acid (20.5:79.5)
- Detector wavelength: 203 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 μL

Xiaoshuan Tongluo Tablets (*Xiaoshuang Tongluo Pian*)

消栓通络片

Sample source

Commercially available Xiaoshuan Tongluo Tablets

Chemical reference substances

Ginsenoside Rg1 (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110703-200322)

Preparation of test solution

Remove the coatings from 20 tablets and grind to a fine powder, accurately weigh 2 g of the powder, accurately add 50 mL of methanol, weigh, heat under reflux for 3 hours, allow to cool, weigh again, replenish the lost weight, mix well, and filter. Accurately measure 25 mL of the filtrate, evaporate to dryness, dissolve the residue in 20 mL of water in a separator, extract with 30, 30, 20 and 20 mL quantities of n-butanol saturated with water by shaking, combine the n-butanol extracts. Wash twice each with 25 mL of 1 % solution of sodium hydroxide, then wash with two 25 mL quantities of water saturated with n-butanol, evaporate the n-butanol extracts to dryness, dissolve the residue in methanol in a 25 mL volumetric flask, dilute with methanol to volume, mix well, filter through a millipore membrane (0.45 μ m), and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18 4.6 \times 150 mm, 5 μ m (993967-902)
- Column temperature: 25 $^{\circ}$ C

Xiaoyin Tablets (*Xiaoyin Pian*) – 消银片

Sample source

Commercially available Xiaoyin Tablets

Chemical reference substances

Matrine (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110805-200306)

Preparation of test solution

Accurately weigh 30 tablets, remove the coatings and grind to a fine powder, accurately weigh 3.5 g in a stoppered conical flask, add 1 mL of concentrated ammonia TS and 30 mL of chloroform, stopper tightly, shake thoroughly and allow to stand overnight. Filter, wash the flask and residue three times with 15 mL of chloroform. Combine the filtrate and washings, evaporate to dryness. Dissolve the residue in methanol. Transfer to a 25 mL volumetric flask, dilute to volume and mix well. Filter through a millipore membrane (0.45 µm) and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX Bonus-RP, 4.6×250 mm, 5 µm (880668-901)
- Column temperature: 35 °C
- Mobile phase: acetonitrile-0.1 % phosphoric acid (85:15) (pH 7.5)
- Detector wavelength: 220 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Xiaochaihu Granules (*Xiaochaihu Keli*) – 小柴胡颗粒

Sample source

Commercially available Xiaochaihu Granules

Chemical reference substances

Baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110715-200212)

Preparation of test solution

Grind the granules to a fine powder. Accurately weigh 0.6 g of the powder in a 10 mL volumetric flask, accurately add 7 mL of ethanol. Treat ultrasonically for 30 minutes, allow to cool, weigh again, replenish the lost weight with 70 % ethanol, mix well, filter, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-0.36 % phosphoric acid (44:56)
- Detector wavelength: 315 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Xiao'er Baibu Zhike Syrup (*Xiao'er Baibu Zhike Tangjiang*)

小儿百部止咳糖浆

Sample source

Commercially available Xiao'er Baibu Zhike Syrup

Chemical reference substances

Baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110715-200212)

Preparation of test solution

Accurately measure 2.0 mL of the syrup to a 100 mL volumetric flask, dissolve and dilute to volume with water, mix well. Accurately measure 10 mL to a 50 mL volumetric flask, dilute to volume with 65 % methanol and mix well, filter, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.2 % phosphoric acid (45:55)
- Detector wavelength: 276nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

Xiao'er Huashi Pills (*Xiao'er Huashi Wan*) – 小儿化食丸

Sample source

Commercially available Xiao'er Huashi Pills

Chemical reference substances

emodin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110756-200210)

Preparation of test solution

Cut the pills into pieces, accurately weigh 6 g, mix well with an equal quantity of kieselguhr, accurately weigh 2 g to a conical flask, accurately add 25 mL methanol, weigh, heat under reflux for 1 hour, allow to cool, weigh again, replenish the lost weight with methanol, mix well, and filter. Accurately measure 10 mL of the filtrate to a round-bottomed flask, evaporate the methanol on a water bath, add 20 mL of a solution of 2.5 mol/L sulfuric acid, treat ultrasonically for 10 minutes to dissolve, heat on a water bath for 1 hour, cool immediately, extract with four 25 mL quantities of ether, combine the ether extracts, wash with 15 mL of water, discard the washings, evaporate the ether on low temperature to dryness, dissolve the residue in a quantity of methanol in a 25 mL volumetric flask, dilute with methanol to volume, and mix well. Filter through a millipore membrane (0.45 μm), use the filtrate as the test solution.

Chromatographic conditions

- Column: Hypersil ODS, 4.6 \times 250 mm, 5 μm (7991618-584)
- Column temperature: 35 $^{\circ}\text{C}$
- Mobile phase: methanol-0.05 % phosphoric acid (80:20)
- Detector wavelength: 289 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 μL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector

Xiao'er Kechuan Granules (*Xiao'er Kechuan Keli*) – 小儿咳喘颗粒

Sample source

Commercially available Xiao'er Kechuan Granules

Chemical reference substances

ephedrin hydrochloride (National Institute for the Control of Pharmaceutical and Biological Products)

Preparation of test solution

Grind 1 package of the granules to a fine powder, accurately weigh 2.0 g, add 120 mL of 5 mol/L sodium hydroxide and shake well. Add 7.5 g of sodium chloride, treat ultrasonically for 10 minutes, distill, transfer 95 mL of the distillate to a 100 mL volumetric flask, containing 5 mL of 0.5 mol/L hydrochloric acid, add water to volume, and shake well. Accurately transfer 10 mL to a 25 mL volumetric flask, add 1 mL of periodic acid (0.25 g in 10mL) and 2.5 mL of 0.25 mol/L sodium hydroxide, shake well, allow to stand for 30 minutes, adjust to pH 7 with 0.5 mol/L hydrochloric acid, add methanol to volume, shake well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water (58:42)

Xiao'er Qingre Tablets (*Xiao'er Qingre Pian*) – 小儿清热片

Sample source

Commercially available Xiao'er Qingre Tablets

Chemical reference substances

Geniposide (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110749-200309)

Preparation of test solution

Remove the coatings from 20 tablets and grind to a fine powder, accurately weigh 0.5 g of the powder, accurately add 50 mL of methanol, treat ultrasonically for 30 minutes, allow to cool, weigh again, replenish the lost weight with methanol, mix well, and filter. Accurately measure 10 mL of the filtrate in a 25 mL volumetric flask, dilute with methanol to volume, and mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C

Xiao'er Qingre Zhike Mixture (*Xiao'er Qingre Zhike Koufuye*)

小儿清热止咳口服液

Sample source

Commercially available Xiao'er Qingre Zhike Mixture

Chemical reference substances

Ephedrine hydrochloride (National Institute for the Control of Pharmaceutical and Biological Products)

Preparation of test solution

Accurately measure 5 mL, add 10 mL of water and 0.5 mL of concentrated ammonia TS, extract with 30, 30, 20, 20 and 20 mL quantities of ether, combine the ether extracts, add 2 mL of a mixture of hydrochloric acid and ethanol (1:20), mix well, evaporate the solvents to dryness at low temperature, dissolve the residue in 5 mL of ethanol in a 25 mL volumetric flask, dilute with 0.1 mol/L solution of hydrochloric acid to volume, and mix well.

Chromatographic conditions

- Column: Reprosil Pur C18 4.0×250 mm, 5 μm
- Column temperature: 25 °C
- Mobile phase: acetonitrile-0.1 % phosphoric acid (containing 0.1 % triethylamine) (4:96)
- Detector wavelength: 275 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 μL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Xiaojianzhong Granules (*Xiaojianzhong Keli*) – 小建中颗粒

Sample source

Commercially available Xiaojianzhong Granules

Chemical reference substances

Paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110736-200220)

Preparation of test solution

Grind the granules to a fine powder, accurately weigh about 0.25 g of the powder in a stoppered conical flask, accurately add 25 mL of dilute ethanol TS, stopper tightly and weigh. Treat ultrasonically for 30 minutes, allow to cool, weigh again, and replenish the lost weight with dilute ethanol TS. Mix well, allow to stand, filter the supernatant, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-water (17:83)
- Detector wavelength: 230 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Xiaoqinglong Mixture (*Xiaoqinglong Heji*) – 小青龙合剂

Sample source

Commercially available Xiaoqinglong Mixture

Chemical reference substances

Paeoflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110736-200220)

Preparation of test solution

Shake the mixture well, accurately measure 3 mL of the mixture in a 25 mL volumetric flask, dilute with methanol to volume, mix well, and filter.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-2 % acetic acid (containing 0.1 % isopropanol) (25:75)
- Detector wavelength: 230 nm
- Flow rate: 1.0 mL/min
- Injection volume: 2 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Xinqin Granules (*Xinqin Keli*) – 辛芩颗粒

Sample source

Commercially available Xinqin Granules

Chemical reference substances

Baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110715-200212)

Preparation of test solution

Grind the granules to fine a powder, accurately weigh 0.3 g of the powder in a stoppered conical flask, accurately add 50 mL of 70 % ethanol, stopper tightly, weigh, treat ultrasonically for 30 minutes, allow to cool, weigh again, replenish the lost weight with 70 % ethanol and mix thoroughly. Filter, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 30 °C
- Mobile phase: methanol-0.36 % phosphoric acid (45:55)
- Detector wavelength: 280 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Xinqingning Tablets (*Tabellae Rhei Preparata*) – 新清宁片

Sample source

Commercially available Xinqingning Tablets

Chemical reference substances

1. Chrysophanol, 2. Emodin
(National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 1.0796-200309, 2. 0756-200210)

Preparation of test solution

Accurately weight 20 tablets, remove the coatings and grind to a fine powder. Accurately weigh 0.1 g of the powder in a stoppered conical flask, accurately add 50 mL of methanol, stopper tightly and weigh. Heat under reflux for 1.5 hours, cool, weigh again, replenish the lost weight with methanol, mix well and filter. Accurately measure 25 mL of the filtrate, evaporate the filtrate to dryness, dissolve the residue in 27 mL of hydrochloric acid solution (2:27), add 20 mL of chloroform, heat under reflux for 30 minutes, cool immediately, transfer to a separating funnel, wash the container with a quantity of chloroform, combine the washings in the separating funnel, separate the chloroform layer, extract the water solution with one 15 mL and two 10 mL quantities of chloroform, combine the chloroform extracts, add a quantity of anhydrous sodium sulfate. Evaporate the chloroform extracts to dryness, dissolve the residue in 2 mL of ethyl acetate, and transfer to a 10 mL volumetric flask, add methanol to volume, mix well, and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-methanol-0.1 % phosphoric acid (35:37:28)
- Detector wavelength: 254 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Xintong Mixture (*Xintong Koufuye*) – 心通口服液

Sample source

Commercially available Xintong Mixture

Chemical reference substances

Puerarin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110752-200209)

Preparation of test solution

Accurately measure 5 mL of the mixture, transfer to a 50 mL volumetric flask, dilute with acetone to volume and mix well. Centrifuge, accurately measure 5 mL of the supernatant liquid, transfer to a 50 mL volumetric flask, dilute with 30 % methanol to volume and mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water (21:79)
- Detector wavelength: 250 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Xuhan Weitong Granules (*Xuhan Weitong Keli*) – 虚寒胃痛颗粒

Sample source

Commercially available Xuhan Weitong Granules

Chemical reference substances

Paeoniflorin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110736-200220)

Preparation of test solution

Grind a quantity of granules to a fine powder. Accurately weigh 0.1 g of the powder in a 10 mL volumetric flask and add 8 mL of water. Treat ultrasonically for 30 minutes, allow to cool, dilute with water to volume and mix well. Filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-0.02 %/L potassium dihydrogen phosphate (28:72)
- Detector wavelength: 230 nm
- Flow rate: 1.0 mL/min

Paniculate Swallowwort Root

(*Radix et Rhizoma Cynanchi Paniculati*) – 徐长卿

Sample source

Commercially available Paniculate Swallowwort Root (Jiangsu province)

Chemical reference substances

Paeonol (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110822-200205)

Preparation of test solution

Accurately weigh 0.5 g of the powder in a 100 mL stoppered conical flask, accurately add 50 mL of methanol and weigh. Treat ultrasonically for 30 minutes, allow to cool and weigh again, replenish the lost solvent with methanol, mix well and filter. Accurately measure 1 mL of the filtrate in a 10 mL volumetric flask, dilute with methanol to volume and mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 μm (883975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-water (45:55)

Himalayan Teasel Root (*Radix Dipsaci*) – 续断

Sample source

Commercially available Himalayan Teasel Root

Chemical reference substances

Asperosaponin IV (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 111685-200401)

Preparation of test solution

Accurately weigh 0.5 g of the powder in a stoppered conical flask, accurately add 25 mL of methanol, stopper tightly and weigh. Treat ultrasonically for 30 minutes, allow to cool and weigh again, replenish the lost solvent with methanol, mix well and filter. Accurately measure 5 mL of the filtrate in a 50 mL volumetric flask, dilute with the mobile phase to volume and mix well.

Chromatographic conditions

- Column: ZORBAX XDB C8 4.6×150 mm, 5 µm (993967-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-water (30:70)

Xueshuan Xinmaining Capsule (*Xueshuan Xinmaining Jiaonang*)

血栓心脉宁胶囊

Sample source

Commercially available Xueshuan Xinmaining Capsules

Chemical reference substances

Rutin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 100080-200306)

Preparation of test solution

Mix the content of the capsules well, accurately weigh 0.5 g in a 50 mL volumetric flask. Add 45 mL of methanol, stopper tightly, treat ultrasonically for 30 minutes, allow to cool, add methanol to volume, mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-1.82 % glacial acetic acid (40:60)

Yatong Yili Pills (*Yatong Yili Wan*) – 牙痛一粒丸

Sample source

Commercially available Yatong Yili Pills

Chemical reference substances

1. Cinobufagin, 2. Bufogenin
(National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 1. 110803-200203, 2. 110718-200207)

Preparation of test solution

Grind the pills to a fine powder, accurately weigh 75 mg of the powder in a stoppered conical flask, accurately add 5 mL of methanol, stopper tightly, and weigh. Treat ultrasonically for 30 minutes, allow to cool, weigh again, replenish the lost weight with methanol and mix well. Filter through a millipore membrane (0.45 µm) and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: acetonitrile-water (45:55)
- Detector wavelength: 296 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Yanhusuo (*Rhizoma Corydalis*) – 延胡索

Sample source

Commercially available Yanhusuo

Chemical reference substances

Tetrahydropalmatine (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 0726-200208)

Preparation of test solution

Accurately weigh 0.5 g of the powder in a flat-bottomed flask, accurately add 50 mL of a mixture of strong ammonia TS and methanol (1:20), weigh, allow to soak for 1 hour and then heat under reflux for 1 hour, allow to cool and weigh again, replenish the lost solvent with the above mixture, mix well and filter. Evaporate accurately 25 mL of the successive filtrate to dryness, dissolve the residue in methanol, transfer to a 5 mL volumetric flask, dilute with methanol to volume and mix well. Filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.1 % phosphoric acid (adjust to pH 6.5 with triethylamine) (55:45)
- Detector wavelength: 280 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Yinianjin Powder (*Yinianjin*) – 一捻金

Sample source

Commercially available Yinianjin Powder

Chemical reference substances

Emodin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110756-200210)

Preparation of test solution

Grind the powder to a fine powder and mix thoroughly, accurately weigh 0.8 g in a stoppered conical flask, accurately add 20 mL of methanol, stopper tightly and weigh. Heat under reflux for 1 hour, allow to cool, weigh again, and replenish the lost weight with methanol. Mix well, filter, accurately measure 5 mL of the filtrate in a 100 mL round-bottomed flask and evaporate the solvent. Add 20 mL of 2.5 mol/L solution of sulfuric acid to the residue, treat ultrasonically for 10 minutes, heat on a water bath for 1 hour and cool immediately. Extract with four 25 mL quantities of ether, combine the ether extracts, wash with 15 mL of water and discard the washings. Evaporate the ether at a low temperature, dissolve the residue with methanol, transfer to a 25 mL volumetric flask, dilute with methanol to volume and mix well. Filter through a millipore membrane (0.45 μ m), use the filtrate as the test solution.

Chromatographic conditions

- Column: Hypersil ODS, 4.6 x 250 mm, 5 mm (7991618-584)
- Column temperature: 25 °C
- Mobile phase: methanol-0.05 % phosphoric acid (80:20)
- Detector wavelength: 289 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 μ L

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Yiqing Granules (*Yiqing Keli*) – 一清颗粒

Sample source

Commercially available Yiqing Granules

Chemical reference substances

Baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110715-200212)

Preparation of test solution

Grind the granules to a fine powder and mix thoroughly. Accurately weigh 0.75 g of the powder in a 100 mL volumetric flask. Add 10 mL of methanol and treat ultrasonically for 10 minutes, allow to cool, dilute with water to volume, mix well, centrifuge and use the supernatant as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.2 mol/L sodium dihydrogen phosphate (adjust pH with phosphoric acid to 2.7) (42:58)
- Detector wavelength: 275 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

Yiganning Granules (*Yiganning Keli*) – 乙肝宁颗粒

Sample source

Commercially available Yiganning Granules

Chemical reference substances

Astragaloside IV (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 0781-9807)

Preparation of test solution

Grind the granules to a fine powder, accurately weigh 5 g and dissolve in 20 mL of water. Extract with four 20 mL quantities of n-butanol saturated with water, combine the n-butanol extracts, wash with two 20 mL quantities of ammonia TS, and wash again with two 20 mL quantities of water saturated with n-butanol. Separate the n-butanol layer, evaporate to dryness, dissolve the residue in a quantity of methanol, transfer to a 5 mL volumetric flask, dilute to volume with methanol. Mix well, filter, and use the filtrate as the solution.

Chromatographic conditions

- Column: ZORBAX Extend C18 4.6×250 mm, 5 µm (770450-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-water (35:65)
- Evaporator tube temperature: 80 °C, Nebulizing temperature: 50 °C, Air flow rate: 1.5 mL/min
- Flow rate: 1.0 mL/min

Chromatographic system

Yiqi Yangxue Mixture (*Yiqi Yangxue Koufuye*) – 益气养血口服液

Sample source

Commercially available Yiqi Yangxue Mixture

Chemical reference substances

Icariine (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 0737-9910)

Preparation of test solution

Accurately measure 3 mL of the mixture in a 10 mL volumetric flask, add a quantity of methanol, treat ultrasonically for 30 minutes, allow to cool, dilute with methanol to volume, mix well, filter the supernatant through a millipore membrane (0.45 µm) and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18 4.6×250 mm, 5 µm (990967-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-0.05 % phosphoric acid (26:74)

Yinhuang Mixture (*Yinhuang Koufuye*) – 银黄口服液

Sample source

Commercially available Yinhuang Mixture

Chemical reference substances

Baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110715-200212)

Preparation of test solution

Accurately measure 0.2 mL of the mixture in a 10 mL volumetric flask, dilute with water to volume and mix well. Accurately measure 1.0 mL in a 10 mL volumetric flask, dilute with 50 % methanol to volume, mix well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: methanol-water-phosphoric acid (50:50:0.2)
- Detector wavelength: 274 nm
- Flow rate: 1.0 mL/min

Yinhuang Mixture (*Yinhuang Koufuye*) – 银黄口服液

Sample source

Commercially available Yinhuang Mixture

Chemical reference substances

Chlorogenic acid (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110753-200212)

Preparation of test solution

Accurately measure 0.2 mL of the mixture in a 10 mL amber volumetric flask, dilute with 50 % methanol to volume, mix well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 35 °C
- Mobile phase: acetonitrile-0.4 % phosphoric acid (10:90)
- Detector wavelength: 327 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Yinqiao Jiedu Capsules (*Yinqiao Jiedu Jiaonang*) – 银翘解毒胶囊

Sample source

Commercially available Yinqiao Jiedu Capsules

Chemical reference substances

Chlorogenic acid (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110753-200212)

Preparation of test solution

Grind the contents of the capsules to a fine powder, accurately weigh 0.25 g in a 50 mL amber volumetric flask, accurately add 40 mL of 50 % methanol, treat ultrasonically for 30 minutes, allow to cool, dilute with 50 % methanol to volume, shake well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water-glacial acetic acid-triethylamine (18:85:1:0.3)
- Detector wavelength: 324 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Ginkgo Leaf (*Folium Ginkgo*) – 银杏叶

Sample source

Commercially available Ginkgo Leaf (Pizhou, Jiangsu province)

Chemical reference substances

1. Quercetin, 2. Kaempferol, 3. Isorhamnetin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 1. 0081-9905, 2. 0864-9901)

Preparation of test solution

Accurately weigh 1 g of the powder in a Soxhlet extractor, add chloroform and heat under reflux for 2 hours. Discard the chloroform solution, evaporate the residue to dryness, add methanol, heat under reflux for 4 hours and evaporate the extract to dryness. Dissolve the residue in 25 mL of a mixture of methanol and 25 % hydrochloric acid (4:1), heat under reflux for 30 minutes, allow to cool, transfer to a 50 mL volumetric flask, add methanol to volume and mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.4 % phosphoric acid (45:55)
- Detector wavelength: 360 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Ginkgo Leaf (*Folium Ginkgo*) – 银杏叶

Sample source

Commercially available Ginkgo Leaf (Pizhou, Jiangsu province)

Chemical reference substances

Ginkgolide A, Ginkgolide B, Ginkgolide C, and Bilobalide (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 0862-200004, 110863-200305, 110864-200304, 110865-200404)

Preparation of test solution

Accurately weigh 1.5 g of the powder in a Soxhlet extractor, add petroleum ether (30-60 °C) and heat under reflux on a water bath at 70 °C for 1 hour. Discard the petroleum ether solution, evaporate the residue and the extractor to dryness at 60 °C in an oven, add methanol, heat under reflux for 6 hours, evaporate the extract to dryness, dissolve the residue in methanol, transfer accurately to a 10 mL volumetric flask, treat ultrasonically for 30 minutes, allow to cool, add methanol to volume, mix well, and allow to stand.

Accurately measure 5 mL of the supernatant and apply to an acidic alumina column, elute with 25 mL of methanol, collect the eluent, evaporate to dryness, dissolve the residue in 5 mL of methanol, transfer to a 10 mL volumetric flask, add 4.5 mL of water, treat ultrasonically for 30 minutes, cool, add methanol to volume, mix well and filter.

Chromatographic conditions

- Column: ZORBAX Extend C18 4.6×250 mm, 5 µm (770450-902)
- Column temperature: 25 °C
- Mobile phase: methanol-tetrahydrofuran-water (25:10:65)
- Evaporator tube temperature: 80 °C, Nebulizing temperature: 50 °C, Air flow rate: 1.2SLM

Ginkgo Tablets (*Tabellae Folium Ginkgo*) – 银杏叶片

Sample source

Commercially available Ginkgo Tablets

Chemical reference substances

1. Quercetin, 2. Kaempferol, 3. Isorhamnetin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 1. 0081-9905, 2. 0864-9901)

Preparation of test solution

Accurately weigh 10 tablets, remove the coatings and grind to a fine powder. Accurately weigh 0.4 g of the powder in a stoppered conical flask, accurately add 20 mL of methanol, stopper tightly, weigh and treat ultrasonically for 20 minutes, allow to cool, weigh again, replenish the lost weight with methanol, mix well and filter. Accurately measure 5 mL of the filtrate in a 100 mL conical flask, add 10 mL of methanol, 5 mL of 25 % solution of hydrochloride acid, mix well, heat under reflux on a water bath for 30 minutes, cool immediately to room temperature, transfer to a 50 mL volumetric flask, dilute with methanol to volume, mix well and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-0.4 % phosphoric acid (45:55)

Yupingfeng Mixture (*Yupingfeng Koufuye*) – 玉屏风口服液

Sample source

Commercially available Yupingfeng Mixture

Chemical reference substances

Astragaloside IV (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 0781-9807)

Preparation of test solution

Accurately measure 20 mL of the mixture, extract with five 25 mL quantities of n-butanol saturated with water, combine the extracts and wash with three 20 mL quantities of ammonia TS. Evaporate the solvent, dissolve the residue in methanol, transfer to a 10 mL volumetric flask and dilute with methanol to volume. Mix well, centrifuge, and use the supernatant as the test solution.

Chromatographic conditions

- Column: ZORBAX Extend C18, 4.6×250 mm, 5 µm (770450-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-water (35:65)
- Evaporator tube temperature: 80 °C, Nebulizing temperature: 50 °C, Air flow rate: 1.5SLM
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 35900 A/D converter
- ELSD PL-ELS 1000
- System control through Agilent ChemStation revision B.01.01

Yueju Pills (*Yueju Wan*) – 越鞠丸

Sample source

Commercially available Yueju Pills

Chemical reference substances

Geniposide (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110749-200309)

Preparation of test solution

Grind a quantity of the pills to a fine powder. Accurately weigh 0.05 g in a stoppered conical flask, accurately add 25 mL of 50 % methanol, stopper tightly and weigh. Treat ultrasonically for 30 minutes, allow to cool, weigh again and replenish the lost weight with 50 % methanol. Mix well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 40 °C
- Mobile phase: acetonitrile-water-phosphoric acid (9:91:0.1)
- Detector wavelength: 240 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Zaizao Shengxue Tablets (*Zaizao Shengxue Pian*) – 再造生血片

Sample source

Commercially available Zaizao Shengxue Tablets

Chemical reference substances

1. Psoralen, 2. Isopsoralen (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 1. 110739-200309, 2. 110738-200309)

Preparation of test solution

Remove the coatings from 20 tablets grind to a fine powder. Accurately weigh about 1 g of the powder in a stoppered conical flask. Accurately add 25 mL of methanol, stopper tightly and weigh accurately. Treat ultrasonically for 30 minutes, allowed to cool, weigh again, replenish the lost weight with methanol, mix well and filter. Accurately measure 1 mL of the filtrate in a 10 mL volumetric flask, add methanol to volume, mix well and filter, and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-0.125 % phosphoric acid (30:70)
- Detector wavelength: 247 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Zangliang Pills (*Zangliang Wan*) – 脏连丸

Sample source

Commercially available Zangliang Pills

Chemical reference substances

Baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110715-200212)

Preparation of test solution

Grind the pills to a fine powder. Accurately weigh 0.25 g in a stoppered conical flask, accurately add 50 mL of methanol, weigh, and heat under reflux for 1 hour. Allow to cool, weigh again, replenish the lost weight with methanol and mix well. Centrifuge and use the supernatant as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883995-902)
- Column temperature: 25 °C
- Mobile phase: methanol-2 % glacial acetic acid (45:55)
- Detector wavelength: 280 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Thunberg Fritillary Bulb (*Bulbus Fritillariae Thunbergii*) – 浙贝母

Sample source

Commercially available Thunberg Fritillary Bulb

Chemical reference substances

Peimine, Peinine

Preparation of test solution

Accurately weigh 2 g of the powder in a flask, add 4 mL of strong ammonia TS and soak for 1 hour. Accurately add 40 mL of a mixture of chloroform and methanol (4:1), weigh, heat under reflux on a water bath at 80 °C for 2 hours, allow to cool and weigh again, replenish the lost solvent with the above mixture and filter. Accurately measure 10 mL of the filtrate and evaporate to dryness in an evaporating dish. Dissolve the residue with methanol, transfer to a 2 mL volumetric flask, dilute with methanol to volume and mix well.

Chromatographic conditions

- Column: ZORBAX XDB C18 4.6×250 mm, 5 µm (990967-902)
- Column temperature: 40 °C
- Mobile phase: acetonitrile-3 % aqueous diethylamine solution (88:12)
- Evaporator tube temperature: 80°C, Nebulizing temperature: 50°C, Air flow rate: 1.5SLM
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Zhenkening Syrup (*Zhenkening Tangjiang*) – 镇咳宁糖浆

Sample source

Commercially available Zhenkening Syrup

Chemical reference substances

Ephedrin hydrochloride (National Institute for the Control of Pharmaceutical and Biological Products)

Preparation of test solution

Accurately weigh 2.5 g of the syrup in a 25 mL volumetric flask, dilute with a 0.01 mol/L solution of hydrochloric acid to volume and mix well. Filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: Reprosil C18 Pur 4.0×250 mm, 5 µm
- Column temperature: 25 °C
- Mobile phase: acetonitrile-20 mmol/L potassium dihydrogen phosphate (pH 3.0) (5:95)
- Detector wavelength: 210 nm
- Flow rate: 1.0 mL/min
- Injection volume: 2 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Zhennaoning Capsules (*Zhennaoning Jiaonang*) – 镇脑宁胶囊

Sample source

Commercially available Zhennaoning Capsules

Chemical reference substances

Puerarin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110752-200209)

Preparation of test solution

Mix the contents of the capsules well, accurately weigh 1 g, grind together with 1 g of kieselguhr, transfer to a Soxhlet extractor, add a quantity of petroleum ether (60-90 °C), heat under reflux on a water bath for 4 hours. Discard the petroleum ether extract and evaporate the remaining solvent in the residue. Transfer the residue with the extractor to a stoppered conical flask and accurately add 50 mL of 30 % ethanol, stopper tightly and weigh. Treat ultrasonically for 40 minutes, allow to cool, weigh again, replenish the lost weight with 30 % ethanol, shake well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water (25:75)
- Detector wavelength: 250 nm
- Flow rate: 1.0 mL/min

Zhenggu Tincture (*Zhenggu Shui*) – 正骨水

Sample source

Commercially available Zhenggu Tincture

Chemical reference substances

Paeonol (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 0708-200205)

Preparation of test solution

Accurately measure 10 mL of the tincture in a 25 mL volumetric flask, dilute with ethanol to volume and mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-water-triethylamine -phosphoric acid (28:72:0.1:0.1)
- Detector wavelength: 274 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Zhibai Dihuang Pills (*Zhibai Dihuang Wan*) – 知柏地黄丸

Sample source

Commercially available Zhibai Dihuang Pills

Chemical reference substances

Paeonol (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 0708-9704)

Preparation of test solution

Cut the pills into pieces, accurately weigh 0.4 g in a stoppered conical flask, accurately add 50 mL of 50 % methanol, stopper tightly and weigh. Treat ultrasonically for 45 minutes, allow to cool, weigh again, replenish the lost weight with 50 % methanol, shake well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water (70:30)

Zhibai Dihuang Pills (*Zhibai Dihuang Wan*) – 知柏地黄丸

Sample source

Commercially available Zhibai Dihuang Pills

Chemical reference substances

Loganin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 1111640-200205)

Preparation of test solution

Cut the pills into pieces, accurately weigh 0.7 g in a stoppered conical flask, accurately add 25 mL of 50 % methanol and weigh. Treat ultrasonically for 15 minutes. Heat under reflux for 1 hour, allow to cool, weigh again, replenish the lost weight with 50 % methanol, shake well and filter. Accurately apply 10 mL of the filtrate to a column packed with neutral alumina (100-200 mesh, 4 g, 1 cm in inner diameter), elute with 50 mL of 40 % methanol, collect the eluents, evaporate to dryness and dissolve the residue in 50 % methanol. Transfer to a 5 mL volumetric flask, dilute with 50 % methanol to volume, shake well, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C

Common Anemarrhena Rhizome (*Rhizoma Anemarrhenae*) – 知母

Sample source

Commercially available Common Anemarrhena Rhizome

Chemical reference substances

Sarsasapogenin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 744-8701)

Preparation of test solution

Accurately weigh 0.5 g of the powder in a stoppered conical flask, accurately add 25 mL of ethanol, weigh and allow to soak overnight. Treat ultrasonically for 40 minutes, allow to cool and weigh again, replenish the lost weight with ethanol and mix well. Evaporate accurately 10 mL of the filtrate to dryness, add 10 mL of water and 1 mL of hydrochloric acid, heat under reflux for 2 hours, allow to cool, add a 40 % solution of sodium hydroxide drop-wise, shaking after each drop, until to the color of the solution changes suddenly from orange-yellow to orange-red. Extract with two 30 mL quantities of chloroform, combine the extracts and evaporate to dryness. Dissolve the residue in methanol, transfer to a 10 mL volumetric flask, dilute to volume with methanol and mix well.

Chromatographic conditions

- Column: ZORBAX XDB C18 4.6×250 mm, 5 µm (990967-902)
- Column temperature: 35 °C
- Mobile phase: methanol-water (95:5)

Immature Orange Fruit (*Fructus Aurantii Immaturus*) – 枳实

Sample source

Commercially available Immature Orange Fruit

Chemical reference substances

Synephrine (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110727-200306)

Preparation of test solution

Accurately weigh 1 g of the powder in a stoppered conical flask, add 50 mL of methanol, weigh accurately, heat under reflux for 1.5 hours, allow to cool, weigh again, replenish the lost weight with methanol, mix well and filter. Accurately measure 10 mL of the filtrate and evaporate to dryness. Dissolve the residue in 10 mL of water, mix well, apply to a column (1.5 cm ID) packed with polyamide (60-90 mesh, 2.5 g). Elute with 25 mL of water and collect the eluent, transfer to a 25 mL volumetric flask. Dilute with water to volume and mix well. Filter through a millipore membrane (0.45 μ m) and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C8, 4.6 \times 150 mm, 5 μ m (993967-906)
- Column temperature: 30 $^{\circ}$ C
- Mobile phase: methanol-aqueous mono potassium phosphate solution (0.06 % mono potassium phosphate + 0.1 % sodium dodecyl sulfate + 0.1 % glacial acetic acid) (50:50)
- Detector wavelength: 275 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 μ L

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser

Zhitong Huazheng Capsules (*Zhitong Huazheng Jiaonang*)

止痛化徵胶囊

Sample source

Commercially available Zhitong Huazheng Capsules

Chemical reference substances

sodium danshensu (National Institute for the Control of Pharmaceutical and Biological Products, Batch number: 110855-200203)

Preparation of test solution

Grind the contents of the capsules to a fine powder, accurately weigh 1 g in a stoppered conical flask, accurately add 50 mL of a solution of hydrochloric acid (1:50), weigh, treat ultrasonically for 30 minutes, allow to cool and weigh again. Replenish the lost weight with a solution of hydrochloric acid (1:50), add 5 g of sodium chloride, stir well and centrifuge. Transfer accurately 25 mL of the supernatant to a separating funnel, extract by shaking with one 50 ml, one 30 ml, and two 20 ml quantities of ethyl acetate. Combine the ethyl acetate extracts, evaporate to dryness on a water bath, dissolve the residue in 50 % methanol, transfer to a 10 mL volumetric flask and dilute to volume and mix well. Filter through a millipore membrane (0.45 µm) and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 30 °C
- Mobile phase: methanol-water-dimethyl- formamide-glacial acetic acid (1:95.5:1: 2.5)

Glabrous Sarcandra Tablets (*Tabellae Sarcandra glabra*)

肿节风片

Sample source

Commercially available Glabrous Sarcandra Tablets

Chemical reference substances

Isofraxidin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0837-200203)

Preparation of test solution

Accurately weigh 10 tablets, remove the coatings and grind to a fine powder, accurately weigh 50 mg of the powder in a stoppered conical flask, accurately add 25 mL of methanol, stopper tightly, weigh and treat ultrasonically for 40 minutes. Allow to cool, weigh again, replenish the lost weight with methanol, mix well and filter, use the filtrate as the test solution.

Chromatographic conditions

- Column: Agilent TC-C18, 4.6×250 mm, 5 µm (518925-902)
- Column temperature: 40 °C
- Mobile phase: acetonitrile-0.1 % phosphoric acid (17:83)
- Detector wavelength: 344 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Zhonghua Dieda Pills (*Zhonghua Dieda Wan*) – 中华跌打丸

Sample source

Commercially available Zhonghua Dieda Pills

Chemical reference substances

Geniposide (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110749-200309)

Preparation of test solution

Cut the pills into pieces and accurately weigh 3 g. Accurately add 25 mL of methanol, weigh accurately, heat under reflux on a water bath for 30 minutes, allow to cool, weigh again, and replenish the lost weight with methanol. Shaking thoroughly, filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 40 °C
- Mobile phase: acetonitrile-water (9:91)
- Detector wavelength: 238nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector

Zhongfeng Huichun Pills (*Zhongfeng Huichun Wan*) – 中风回春丸

Sample source

Commercially available Zhongfeng Huichun Pills

Chemical reference substances

Sodium danshensu (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110855-200203)

Preparation of test solution

Grind a quantity of pills to a fine powder, accurately weigh 0.4 g of the powder in a stoppered conical flask, accurately add 25 mL of 50 % methanol, stopper tightly, weigh, treat ultrasonically for 30 minutes, allow to cool, replenish the lost weight with 50 % methanol, shake well, centrifuge, filter the supernatant through a millipore membrane (0.45 μm) and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6 \times 250 mm, 5 μm (880975-902)
- Column temperature: 25 $^{\circ}\text{C}$
- Mobile phase: methanol-1.5 % glacial acetic acid (4.5:95.5)
- Detector wavelength: 280 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 μL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series diode-array detector

Shuanghuanglian Injection (*Zhusheyong Shuanghuanglian*)

注射用双黄连（冻干）

Sample source

Commercially available Shuanghuanglian for Injection

Chemical reference substances

Baicalin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110715-200212)

Preparation of test solution

Accurately weight 10 mg of the contents, add a quantity of 50 % methanol, treat ultrasonically for 20 minutes to dissolve. This gives a solution containing about 0.2 mg/mL as the test solution.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 μ m (883975-902)
- Column temperature: 25 $^{\circ}$ C
- Mobile phase: methanol-0.15 % glacial acetic acid (24.8:75.2)
- Detector wavelength: 278nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 μ L

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Shuanghuanglian Injection (*Zhusheyong Shuanghuanglian*)

注射用双黄连（冻干）

Sample source

Commercially available Shuanghuanglian for Injection

Chemical reference substances

Forsythin (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110821-200305)

Preparation of test solution

Accurately weigh 0.1 g, dissolve in 5 mL of a 65 % solution of ethanol, apply to a column (1 cm in inner diameter), packed with neutral alumina (100-200 mesh, 5 g), elute with 65 % ethanol, collect the eluent in a 25 mL volumetric flask, dilute with 65 % ethanol to volume and mix well.

Chromatographic conditions

- Column: ZORBAX XDB C18, 4.6×150 mm, 5 μ m (993967-902)
- Column temperature: 25 °C
- Mobile phase: acetonitrile-0.05 % phosphoric acid (19.5:80.5)
- Detector wavelength: 203 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 μ L

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Shuanghuanglian Injection (*Zhusheyong Shuanghuanglian*)

注射用双黄连（冻干）

Sample source

Commercially available Shuanghuanglian for Injection

Chemical reference substances

Chlorogenic acid (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110753-200212)

Preparation of test solution

Accurately weigh 60 mg in a 50 mL amber volumetric flask, dissolve and dilute to volume with water, and mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water (containing 1.2 % glacial acetic acid and 0.25 % triethylamine (24.8:75.2))
- Detector wavelength: 324 nm
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Zhuanggu Shenjin Capsules (*Zhuanggu Shenjin Jiaonang*)

壮骨伸筋胶囊

Sample source

Commercially available Zhuanggu Shenjin Capsules

Chemical reference substances

Icariine (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 0737-9910)

Preparation of test solution

Grind the contents of the capsules to a fine powder and mix well. Accurately weigh 0.5 g of the powder in a Soxhlet extractor, heat under reflux with 40 mL of chloroform for 2 hours, discard the chloroform solution. Evaporate the residue to dryness, add 40 mL of methanol, heat under reflux for 4 hours. Evaporate the extract, moisten the residue with a quantity of methanol, dissolve in 2 mL of water, apply to a column of macroporous absorbency resins D101, elute with 100 mL of water, 100 mL of 30 % ethanol and 50 mL of 70 % ethanol at the speed of 3 mL/min. Collect the eluent of 70 % ethanol and evaporate to dryness. Dissolve the residue in methanol in a 5 mL volumetric flask and dilute to volume, mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×150 mm, 5 µm (883975-902)
- Column temperature: 25 °C
- Mobile phase: methanol-water (54:46)
- Detector wavelength: 270 nm
- Flow rate: 1.0 mL/min
- Injection volume: 2 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Tatarian Aster Root (*Radix et Rhizoma Asteris*) – 紫菀

Sample source

Commercially available Tatarian Aster Root

Chemical reference substances

Shionone (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 111581-200403)

Preparation of test solution

Accurately weigh 1 g of the powder in a stoppered conical flask, accurately add 20 mL of methanol and weigh. Allow to soak for 1 hour at 40 °C, treat ultrasonically for 15 minutes, allow to cool and weigh again, replenish the lost solvent with methanol and mix well.

Chromatographic conditions

- Column: ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Column temperature: 40 °C
- Mobile phase: acetonitrile-water (13:87)
- Detector wavelength: 200 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler

Zuojin Pills (Zuojin Wan) – 左金丸

Sample source

Commercially available Zuojin Pills

Chemical reference substances

Berberine hydrochloride (National Institute for the Control of Pharmaceutical and Biological Products, Batch number 110713-200209)

Preparation of test solution

Grind a quantity of the pills to a fine powder, accurately weigh 1.0 g in a stoppered conical flask, accurately add 100 mL of a mixture of hydrochloric acid and methanol (1:100) and weigh. Allow to soak for 1 hour and then heat under reflux for 1 hour, allow to cool, weigh again, replenish the lost weight with a mixture of hydrochloric acid and methanol (1:100) and shake well. Filter and use the filtrate as the test solution.

Chromatographic conditions

- Column: ZORBAX XDB C18, 4.6×150 mm, 5 µm (993967-902)
- Column temperature: 40 °C
- Mobile phase: acetonitrile-0.05 mol/L potassium dihydrogen phosphate (adjust pH with phosphoric acid to 3.06) (20:80)
- Detector wavelength: 350 nm
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment

Amoxicillin and Clavulanate Potassium Tablets

Amoxicillin (130409-200208) Clavulanic acid (130429-200203) – Method number WA087
阿莫西林克拉维酸钾片片

Assay

Test solution: Grind 10 tablets to a fine powder, dissolve an accurately weighed quantity of the powdered tablets (equivalent to about the average weight of one tablet) in water in a 200 mL volumetric flask, dilute to volume, mix well and filter. Transfer 2 mL of the filtrate, accurately measured, to a 10 mL volumetric flask, dilute with water to volume, mix well and use as the test solution.

Reference solution: Dissolve a quantity of amoxicillin CRS and clavulanic acid CRS in water and use as the reference solution. The concentration should be equivalent to the test solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)

Salicylic acid	9.53	2.3	11543	9.5	1.07

Aspirin Enteric-Microencapsulated Capsules – 阿司匹林肠溶胶囊

Aspirin (100113-200302) Salicylic acid (100106-200303) – Method number WA080

Assay

Test solution: Accurately weigh a quantity of the contents, equivalent to about 0.1 g of aspirin, in a 100 mL volumetric flask, dilute with a solution of 1 % glacial acetic acid in anhydrous methanol to volume, mix well and filter. Use the filtrate as the test solution.

Reference solution: Dissolve an accurately weighed quantity of salicylic acid CRS with in a solution of 1 % glacial acetic acid in anhydrous methanol to produce a solution of 30 µg/mL and use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: 1 % glacial acetic acid solution : methanol = 55:45
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 280 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

The chromatogram of the reference solution ---HPLC2\WA080\004-0301

The chromatogram of the test solution --- HPLC2\ WA080\005-0401

Salicylic acid	9.53	2.3	11543	9.5	1.07

Aspirin Effervescent Tablets – 阿司匹林泡腾片

Aspirin (100113-200302) – Method number WA268

Assay

Test solution: Accurately weigh 10 tablets and grind to a fine powder. Accurately weigh a quantity of the powder equivalent to about 25 mg of aspirin in a 100 mL volumetric flask, add 50 mL of a mixture of acetonitrile-methanol-formic acid (40:59:1), treat ultrasonically to dissolve the aspirin, mix well, filter and use as the test solution.

Reference solution: Dissolve an accurately weighed quantity of aspirin CRS in a mixture of acetonitrile-methanol-formic acid (40:59:1) to produce the solution of 0.5 mg/mL and use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)
- Mobile phase: acetonitrile: methanol: 0.01 mol/L potassium dihydrogen phosphate (containing 0.275 % of triethylamine) (adjust pH to 3.3 with phosphoric acid) =10:30:60
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 280 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Sodium Ferulate – 阿魏酸钠

Sodium Ferulate – Method number WA088

Assay

Test solution: Dissolve a quantity of the substance being examined in mobile phase to produce a solution of 0.7 mg/mL and use as the test solution.

Reference solution: Dilute an accurately measured quantity of test solution with mobile phase to produce a solution of 7 µg/mL and use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: water : methanol : acetic acid = 69:30:1.5
- Flow rate: 1.0 mL/min

Aciclovir – 阿昔洛韦

Aciclovir (630-200001) – Method number WA160

Assay

Test solution: Dissolve about 50 mg, accurately weighed, in 5 mL of 0.4 % sodium hydroxide solution in a 250 mL volumetric flask, dilute with water to volume, mix well and use as the test solution.

Reference solution: Dissolve 10 mg of guanine CRS in a 0.4 % sodium hydroxide solution in a 100 mL volumetric flask, dilute to volume and mix well. Measure accurately 2 mL in a 100 mL volumetric flask, dilute to volume with water, mix well and use as the reference solution.

Chromatographic conditions

- Column : Agilent ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: methanol:water=10:90
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C

Estazolam – 艾司唑仑

Estazolam (1219-0102) – Method number WR024

Assay

Test solution: Dissolve a quantity in mobile phase to produce a solution of 0.2 mg/mL and use as the test solution.

Reference solution: Dilute an accurately measured quantity of the test solution with mobile phase to produce a solution of 2 µg/mL and use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)
- Mobile phase: water:methanol=35:65
- Flow rate: 1.0 mL/min
- Injection volume: 20 µL
- Column temperature: 30 °C
- Detector wavelength: 223 nm

Omeprazole Enteric-coated Capsules – 奥美拉唑肠溶胶囊

Omeprazole – Method number WA201

Assay

Test solution: Accurately weigh the contents of 20 capsules and grind to a fine powder. Accurately weigh a quantity, equivalent to about 20 mg of omeprazole, in a 100 mL volumetric flask, add 20 mL of ethanol and about 60 mL of phosphate BS (pH 11.0), treat ultrasonically to dissolve the omeprazole, dilute with phosphate BS (pH 11.0) to volume, mix well and filter. Accurately measure 5 mL of the filtrate in a 50 mL volumetric flask, dilute with water to volume, mix well and use as the test solution.

Reference solution: Repeat the procedure using omeprazole CRS to produce the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX XDB-C8 4.6×150 mm, 5 µm (993967-906)
- Mobile phase: 0.01 mol/L disodium hydrogen phosphate solution (adjust pH to 7.6 with phosphoric acid):acetonitrile=77: 23
- Flow rate: 1.0 mL/min

Betamethasone Sodium Phosphate Injection

Betamethasone Sodium Phosphate (10016-0011) – Method number WR084
倍他米松磷酸钠注射液

Assay

Internal standard solution: dissolve a quantity of ethyl p-hydroxybenzoate in methanol to produce a solution of 0.1mg per ml, mix well.

Test solution: Transfer 2 mL of the injection fluid, accurately measured, to a 50 mL volumetric flask, dilute with water to volume, mix well, accurately measure 5 mL in a 25 mL volumetric flask, accurately add 5 mL of internal standard solution, dilute with water to volume, mix well and use as the test solution.

Reference solution: Dissolve a quantity of betamethasone sodium phosphate CRS, accurately weighed, in water to produce a solution of about 0.21 mg/mL, calculated on the anhydrous basis. Accurately measure 5 mL each of the solution and the internal standard solution in a 25 mL volumetric flask, dilute with water to volume, mix well and use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: methanol -0.05M potassium dihydrogen phosphate solution (55:45)

Betamethasone Ointment – 倍他米松软膏

Betamethasone (0118-9502) – Method number WR083

Assay

Test solution: Dissolve a quantity of the substance, equivalent to about 1 mg of betamethasone, accurately weighed, in 50 ml of methanol and mix for 30 seconds at 9500 rpm with a homogenizer, filter through a millipore membrane (0.45 µm), discard the initial 5 mL of the filtrate, use the successive filtrate as the test solution.

Reference solution: Dissolve a quantity of betamethasone CRS, accurately weighed, in the mobile phase to produce a solution of 20 µg/ml and use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB C18 4.6X250 mm, 5 µm (880975-902)
- Mobile phase: methanol-water=58:42
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 240 nm

Piracetam Capsules – 吡拉西坦胶囊

Piracetam (100386-200301) – Method number WA072

Assay

Test solution: Accurately weigh and dissolve a quantity of the well-mixed contents, equivalent to about 0.1 g of piracetam, in mobile phase in a 100 mL volumetric flask, shake to dissolve the piracetam and dilute to volume, mix well and filter, accurately transfer 5 mL of the filtrate to a 50 mL volumetric flask and dilute with mobile phase to volume, mix well. Use the resulting solution as the test solution.

Reference solution: Repeat the procedure using piracetam CRS to produce the reference solution.

Chromatographic conditions

- Column: Agilent Hypersil ODS-C18 4.6×250 mm, 5 µm (7991618-584)
- Mobile phase: methanol : water =10:90

Testosterone Propionate – 丙酸睾酮

Testosterone Propionate (0008-9404) – Method number WA006

Assay

Internal standard solution: Dissolve a quantity of nandrolone phenylpropionate CRS, accurately weighed, in methanol to produce a solution of 1.6 mg/mL.

Test solution: Dissolve a quantity of testosterone propionate CRS in methanol to produce a solution of 1 mg/mL, use as the test solution.

Reference solution: Transfer 1 ml of the test solution, accurately measured, into a 100 mL volumetric flask, dilute with methanol to volume and mix well, use as the reference solution.

Dissolve a quantity of the substance, accurately weighed, in methanol in a 25 mL volumetric flask and dilute to volume, mix well. Accurately measure and transfer 5 mL each of this solution and the internal standard solution to a 25 mL volumetric flask, dilute with methanol to volume, mix well and use for the system suitability test.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: methanol : water = 90 : 10

Clobetasol Propionate – 丙酸氯倍他索

Clobetasol Propionate (10302-0001) – Method number WR005

Assay

Internal standard solution: Add methanol to a quantity of fluocinonide to produce a solution of 0.15 mg/mL.

Reference solution: Dissolve an accurately weighed quantity of clobetasol propionate CRS in methanol and dilute to volume to produce a solution of 0.2 mg/mL. Accurately measure 5 mL of this solution and 5 mL of the internal standard solution in 50 mL volumetric flask, dilute to volume with methanol, mix well.

Test solution: Accurately weigh a quantity equivalent to about 1 mg of clobetasol propionate in a 50 mL volumetric flask, accurately add 5 mL of internal standard solution. Add 30 mL of methanol, heat in a water bath at 60 °C for 5 minutes, with intermittent stirring until the cream is completely dissolved, allow to cool, dilute to volume with methanol, mix well, cool in ice-water bath for more than 2 hours, filter immediately and cool to room temperature. Use the filtrate as test solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)

Bulleyaconitine A Oral Solution – 草乌甲素口服液

Bulleyaconitine A – Method number WA136

Assay

Test solution: Dilute an accurately measured quantity of the substance with mobile phase to produce a solution of 20 µg/mL as the test solution.

Reference solution: Dissolve and dilute an accurately weighed quantity of bulleyaconitine A CRS with mobile phase to produce a solution of 20 µg/mL as the reference solution.

Chromatographic conditions

- Column : Agilent ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)
- Mobile phase: acetonitrile : 0.2 % triethylamine solution (adjust pH to 3.1±0.1 with phosphoric acid) = 40:60
- Flow rate: 1.0 mL/min
- Injection volume: 20 µL
- Column temperature: 30 °C
- Detector wavelength: 260 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Potassium Dehydroandrograpolid Succinate – 穿琥宁

Potassium dehydroandrograpolid succinate (111598-200301) – Method number WA131

Assay

Test solution: Dissolve an accurately measured quantity of the substance in mobile phase to produce a solution of 0.4 mg/mL as the test solution.

Reference solution: Dilute an accurately measured quantity of the test solution with mobile phase to produce a solution of 8 µg/mL as the reference solution.

Chromatographic conditions

- Column : Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: methanol : 0.05 % potassium dihydrogen phosphate solution (adjust to pH 2.5±0.05 to with phosphoric acid) = 65:35
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 251 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Estradiol – 雌二醇

Estradiol (10182-0103) – Method number WR125

Assay

Test solution: Dissolve an accurately measured quantity of the substance in mobile phase to produce a solution of 1 mg/mL as the test solution.

Reference solution: Dilute an accurately measured quantity of the test solution with mobile phase to produce a solution of 10 µg/mL as the reference solution.

Dissolve a quantity of estradiol and estrone in mobile phase to produce a solution of 0.1 mg/mL each for the system suitability test.

Chromatographic conditions

- Column: Agilent ZORBAX Bonus-RP, 4.6×250 mm, 5 µm (880668-901)
- Mobile phase: acetonitrile:water=55:45
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 220 nm

Chromatographic system

Estradiol Sustained-release Patch – 雌二醇缓释贴片

Estradiol (10182-0103) – Method number WA222

Assay

Test solution: Remove the protective liner from one patch and put in a 100 mL volumetric flask, allow the patch to soak in 5 mL of ethyl acetate for 30 minutes, place the volumetric flask in an ultrasonic bath for 15 minutes to dissolve the estradiol, allow to cool to room temperature, dilute with methanol to volume, mix well and filter, use the filtrate as the test solution.

Reference solution: Dissolve an accurately weighed quantity of estradiol CRS in methanol to produce a reference solution of about 25 µg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX Bonus-RP, 4.6×250 mm, 5 µm (880668-901)
- Mobile phase: methanol:water=75:25
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Dexamethasone Acetate – 醋酸地塞米松

Hydrocortisone acetate (10013-0106) Dexamethasone acetate (100122-200304) –
Method number WR127

Assay

Test solution: Dissolve about 25 mg of the substance in 17 mL methanol in a 25 mL volumetric flask, dilute with sodium acetate solution (pH 4.5) to volume, mix well and use as the test solution.

Reference solution: Dissolve about 10 mg of hydrocortisone acetate with 7 mL of methanol in a 10 mL volumetric flask and dilute with sodium acetate solution (pH 4.5) to volume, mix well. Accurately measure 1 mL each of the resulting solution and test solution in a 100 mL volumetric flask, dilute with mobile phase to volume, mix well and use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18, 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: methanol : tetrahydrofuran : sodium acetate solution (dissolve 10.2 g of sodium acetate in water and dilute to 1000 mL, mix well, adjust pH to 4.5±0.05 with glacial acetic acid) = 30:10:60
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 242 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series thermostated column compartment

Dexamethasone Acetate Tablets – 醋酸地塞米松片

Dexamethasone acetate (100122-200304) – Method number WR128

Assay

Test solution; Accurately weigh 20 tablets and grind to a fine powder. To an accurately weighed quantity, equivalent to about 2.5 mg of dexamethasone acetate, add a quantity of mobile phase in a 50 mL volumetric flask, treat ultrasonically for 30 minutes until the dexamethasone acetate dissolves. Dilute with mobile phase to volume, shake well and filter, use the filtrate as the test solution.

Reference solution: Dissolve a quantity of dexamethasone acetate CRS in mobile phase to produce a solution of 50 µg/mL as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX Eclipse XDB C18 4.6×250 mm, 5 µm (990967-902)
- Mobile phase: methanol:water = 70:30
- Flow rate: 1.0 mL/min

Dexamethasone Acetate Ointment – 醋酸地塞米松软膏

Dexamethasone acetate (100122-200304) – Method number WR129

Assay

Test solution: Dissolve an accurately weighed quantity of the cream, equivalent to about 0.5mg of dexamethasone acetate, in 50 mL of methanol, mix for 30 seconds at 9500 rpm with a homogenizer, put in an ice-water bath for 1 hour, filter through a millipore membrane (0.45 µm), discard the first 5 mL and use the successive filtrate as the test solution.

Reference solution: Dissolve an accurately weighed quantity of dexamethasone acetate CRS in methanol and dilute to produce a solution of 10 µg/mL as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX Eclipse XDB C18 4.6×250 mm, 5 µm (990967-902)
- Mobile phase: methanol:water = 70:30
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C

Megestrol Acetate Tablets – 醋酸甲地孕酮片

Megestrol acetate (10171-0102) – Method number WA224

Assay

Test solution: Accurately weigh 20 tablets and grind to a fine powder. To an accurately weighed quantity, equivalent to about 1 mg of megestrol acetate, add a quantity of methanol in a 50 mL volumetric flask, and treat ultrasonically until the megestrol acetate dissolves, dilute with methanol to volume, mix well and centrifuge, use the supernatant as the test solution.

Reference solution: Dissolve an accurately weighed quantity of megestrol acetate CRS in methanol to produce a solution of about 20 µg/mL as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: water:methanol = 20:80
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 288 nm

Chromatographic system

Cortisone Acetate – 醋酸可的松

Cortisone acetate (100123-200303) Hydrocortisone acetate (10013-0106) – Method number WR126

Assay

Test solution: Accurately weigh about 10 mg in a 10 mL volumetric flask, add a quantity of acetonitrile, shake to dissolve the cortisone acetate and dilute to volume, mix well and use as the test solution.

Reference solution: Dilute an accurately measured quantity of the test solution with acetonitrile to produce a solution of 10 µg/mL as the reference solution.

Dissolve an accurately weighed quantity of cortisone acetate CRS and hydrocortisone acetate CRS in acetonitrile to produce a mixture of 10 µg/mL each for the system suitability test.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: acetonitrile:water = 45:55
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 254 nm

Chromatographic system

Rifampicin for Eye Use – 滴眼用利福平

Rifampicin (130496-2000010)

Rifampicin quinone (130413-200303) – Method number WA221

Assay

Test solution: Accurately weigh a quantity of the substance and grind to a fine powder. To an accurately weighed quantity of the powder add 30 ml of a mixture of acetonitrile-water (6:4) in a 50 mL volumetric flask, treat ultrasonically for 2 minutes to dissolve the rifampicin, dilute to volume, mix well and filter. Accurately transfer 5 mL of the filtrate to a 25 mL volumetric flask, dilute with a mixture of acetonitrile-water (6:4) to volume and mix well.

Dissolve a quantity of rifampicin CRS and rifampicin quinine CRS in a mixture of acetonitrile-water (6:4) to produce a solution of 0.08 mg/mL for the system suitability test.

Chromatographic conditions

- Column: Agilent ZORBAX XDB-C8 4.6×150 mm, 5 µm (993967-906)
- Mobile phase: 75 mM potassium dihydrogen phosphate : 1 M citric acid : methanol : acetonitrile = 40:4:28:28

Dexamethasone Sodium Phosphate Eye Drops

Dexamethasone sodium phosphate (10016-0011) – Method number WR153
地塞米松磷酸钠滴眼液

Assay

Test solution: Accurately measure a quantity of the substance and dilute with mobile phase to produce a solution of 50 µg/mL as the test solution.

Reference solution: Dissolve an accurately weighed quantity of dexamethasone CRS in mobile phase to produce a solution of 50 µg/mL as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm, (880975-902)
- Mobile phase: methanol : acetonitrile : triethylamine solution (dilute 7.5 mL of triethylamine with water to 1000 mL, adjust pH to 3.0±0.5 with phosphoric acid) = 40:20:40
- Flow rate: 1.0 mL/min
- Injection volume: 20 µL
- Column temperature: 30 °C
- Detector wavelength: 242 nm

Chromatographic system

Diazepam – 地西洋

Diazepam – Method number WR029

Assay

Test solution: Dissolve an accurately weighed quantity of diazepam in methanol to produce a solution of 0.45 mg/mL as the test solution.

Reference solution: Accurately measure 1 mL of the test solution in a 100 mL volumetric flask and dilute with methanol to volume, mix well and use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: methanol-water=80:20
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 254 nm

Scopolamine Butylbromide Injection – 丁溴东莨菪碱注射液

Scopolamine butylbromide (0130-9501) – Method number WR001

Assay

Test solution: Accurately measure a quantity of the injection fluid, dilute with mobile phase to produce a solution of 0.5 mg/mL, mix well and use as the test solution.

Reference solution: Dissolve an accurately weighed quantity of scopolamine butylbromide CRS in mobile phase to produce a solution of 0.5 mg/mL as the reference solution.

Chromatographic conditions

- Column : Agilent ZORBAX SB-Phenyl 4.6x250mm, 5 μ m (880975-912)
- Mobile phase: 0.008 mol/L sodium laurylsulfate in a mixture of 0.004 % phosphoric acid solution : acetonitrile =40:60
- Flow rate: 1.0 mL/min
- Injection volume: 10 μ L
- Column temperature: 30 $^{\circ}$ C
- Detector wavelength: 210 nm

Paracetamol Drops – 对乙酰氨基酚滴剂

Paracetamol (100018-200107) Theophylline (100121-199903) – Method number WA016

Assay

Internal standard solution: Dissolve a quantity of theophylline CRS in water to produce a solution of 1.0 mg/mL, mix well.

Test solution: Dissolve an accurately measured quantity of the substance in water to produce a solution of 0.6 mg/mL. Accurately measured 5 mL each of this solution and the internal standard solution in a 50 mL volumetric flask, dilute with water to volume, mix well and use as the test solution.

Reference solution: Repeat the procedure using paracetamol CRS dried to constant weight at 105 °C and use as the reference solution.

Chromatographic conditions:

- Column: Agilent ZORBAX XDB-C18 4.6×250 mm, 5 µm (990967-902)
- Mobile phase: methanol : 0.05 mol/L ammonium acetate solution = 15:85
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 257 nm

Chromatographic system

Paracetamol Granules – 对乙酰氨基酚颗粒

4-Aminophenol (ACROS) Paracetamol (100018-200107)– Method number WA017

Assay

Test solution: Accurately weigh a quantity of the well-mixed contents, equivalent to about 100 mg of paracetamol, in a 10 mL volumetric flask, add a quantity of mobile phase and shake to dissolve the paracetamol, dilute with mobile phase to volume and shake well. Filter and use the filtrate as the test solution.

Reference solution: Prepare a solution of 10 µg of 4-aminophenol CRS per mL in mobile phase as the reference solution.

Chromatographic conditions:

- Column: Agilent ZORBAX XDB-C18 4.6×250 mm, 5 µm (990967-902)
- Mobile phase: methanol : 0.05 mol/L ammonium acetate solution = 15:85
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C

Paracetamol Effervescent Tablets – 对乙酰氨基酚泡腾片

Paracetamol (100018-200107) – Method number WA015

Assay

Test solution: Accurately weigh 10 tablets and grind to a fine powder. Accurately weigh a quantity of the powder, equivalent to about 25 mg of paracetamol, in a 50 mL volumetric flask, dilute with mobile phase to volume, mix well. Filter and accurately transfer 10 mL of the filtrate to a 50 mL volumetric flask, dilute with mobile phase to volume, mix well and use as the test solution.

Reference solution: Repeat the procedure using paracetamol CRS and use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)
- Mobile phase: phosphate BS (pH 4.5) (dissolve 15.04 g sodium dihydrogen phosphate and 0.0627 g disodium hydrogen phosphate in 1000 mL of water, adjust pH to 4.5) : methanol = 80:20

Paracetamol and Caffeine Tablets – 酚咖片

Paracetamol (100018-200107) Caffeine,

Benzoic acid (100419-200301) – Method number WA312

Assay

Internal standard solution: dissolve a quantity of benzoic acid with methanol to produce a solution of 3.5 mg/mL, mix well.

Reference solution: To an accurately weighed quantity of paracetamol CRS and caffeine CRS dried to constant weight at 105 °C, add a mixture of methanol-glacial acetic acid (95:5) in a volumetric flask to produce a solution of 0.25 mg of paracetamol and 0.03 mg of caffeine per mL. Accurately measure 20 mL of the resulting solution and 5 mL of internal standard solution in a 50 mL volumetric flask, dilute with a mixture of methanol-glacial acetic acid (95:5) to volume, mix well and use as the reference solution.

Test solution: Accurately weigh 40 tablets and grind to a fine powder. Accurately weigh a quantity of the powder, equivalent to about 0.25 g of paracetamol, in a 100 mL volumetric flask, add about 75 mL of a mixture of methanol-glacial acetic acid (95:5), shake for 30 minutes, dilute with the mixture to volume, mix well and filter. Accurately measure 2 mL of the filtrate and 5 mL of internal standard solution in a 50 mL volumetric flask, dilute with the mixture of methanol-glacial acetic acid (95:5) to volume, mix well and use as the test solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)
- Mobile phase: methanol : water : glacial acetic acid = 28:69:3
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 275 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series thermostated column compartment

Fluconazole Tablets – 氟康唑片

Fluconazole (100314-0101) – Method number WA277

Assay

Test solution: Accurately weigh 10 tablets and grind to a fine powder. To an accurately weighed quantity, equivalent to about 50 mg of fluconazole, add a quantity of mobile phase in a 100 mL volumetric flask, treat ultrasonically to dissolve the fluconazole, dilute to volume, mix well, filter and use the filtrate as the test solution.

Reference solution: Dissolve an accurately weighed quantity of fluconazole CRS with mobile phase to produce a solution of 0.5 mg/mL as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX XDB-C18 4.6×250 mm, 5 µm (990967-902)
- Mobile phase: 0.05 mol/L potassium dihydrogen phosphate (adjust pH to 7.0 with sodium hydroxide) : methanol = 55:45
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 261 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Fluconazole and Sodium Chloride Injection – 氟康唑氯化钠注射液

Fluconazole (100314-0101) – Method number WA334

Assay

Test solution: Accurately measure a quantity of the substance and dilute with mobile phase to produce a solution of about 0.5 mg/mL as the test solution.

Reference solution: Dissolve an accurately weighed quantity of fluconazole CRS in mobile phase to produce a reference solution of 0.5 mg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX XDB C18 4.6X250 mm, 5 µm (990967-906)
- Mobile phase: methanol : phosphate BS (dissolve 6.8 g of potassium dihydrogen phosphate in a quantity of water, adjust pH to 7.0 with 0.1 mol/L sodium hydroxide solution, dilute to 1000 mL) = 45:55
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 260 nm

Chromatographic system

Fleroxacin – 氟罗沙星

Fleroxacin (130458-200301) – Method number WA127

Assay

Test solution: Dissolve a quantity of the substance in mobile phase to produce the test solution containing 2.0 mg/mL.

Reference solution: Dissolve an accurately measured quantity of test solution in mobile phase to produce a reference solution of 20 µg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm, (880975-902)
- Mobile phase: triethylamine phosphate solution (add 5 mL of triethylamine and 7 mL of phosphoric acid to water, and dilute to volume of 1000 mL) : acetonitrile = 85:15
- Flow rate: 1.0 mL/min
- Injection volume: 20 µL
- Column temperature: 30 °C
- Detector wavelength: 286 nm

Chromatographic system

Fleroxacin Capsules – 氟罗沙星胶囊

Fleroxacin (130458-200301) – Method number WA129

Assay

Test solution: Transfer an accurately weighed quantity of the mixed contents of the capsules, equivalent to about 100 mg of fleroxacin, to a 100 mL volumetric flask, add a quantity of mobile phase to dissolve, dilute to volume, mix well and filter. Accurately measure 5 mL of the filtrate in a 100 mL volumetric flask, dilute with mobile phase to volume, mix well and use as the test solution.

Reference solution: Accurately weigh about 50 mg of fleroxacin CRS in a 50 mL volumetric flask and dissolve in mobile phase, dilute to volume. Measure accurately 5 mL of the solution in a 100 mL volumetric flask, dilute to volume and use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm, (880975-902)
- Mobile phase: triethylamine phosphate solution (add 5 mL of triethylamine and 7 mL of phosphoric acid to water, and dilute to volume of 1000 mL) : acetonitrile = 85:15
- Flow rate: 1.0 mL/min
- Injection volume: 20 µL

Coenzyme Q₁₀ Capsules – 辅酶Q10胶丸

Coenzyme Q₁₀ (140611-200102) – Method number WA196

Assay

Test solution: Protect from light throughout the procedure. Split open 10 pills carefully. Add a quantity of dehydrated ethanol to the well-mixed contents, heat in a 50 °C water bath to dissolve the coenzyme Q₁₀, allow to cool. Dilute with dehydrated ethanol to produce a solution containing 0.2 mg of coenzyme Q10 per mL, mix well and use as the test solution.

Reference solution: Dilute a quantity of coenzyme Q₁₀ CRS with dehydrate ethanol to produce a solution of 0.2 mg/mL, mix well and use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: ethanol : methanol = 2:1
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature : 35 °C

Compound Diphenoxylate Tablets - Diphenoxylate

Diphenoxylate (ARCOS) – Method number WA116

复方地芬诺酯片-地芬诺酯-地芬诺酯

Assay

Test solution: Accurately weigh 50 tablets and grind to a fine powder. Dissolve an accurately weighed quantity of the powdered tablets, equivalent to about 2.5 mg of diphenoxylate hydrochloride, in a quantity of the mobile phase in 50 mL volumetric flask, shake well. Dilute with the mobile phase to volume, mix well, filter and use the filtrate as the test solution.

Reference solution: Dilute an accurately weighed quantity of diphenoxylate hydrochloride CRS dried to constant weight at 105 °C with mobile phase to produce a reference solution of 50 µg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)
- Mobile phase: triethylamine phosphoric acid solution (add 4 mL of triethylamine add 500 mL of water and 1.8 mL of phosphoric acid, dilute to 1000 mL with water, mix well) : acetonitrile = 50:50, adjust the pH value to 3.10±0.2
- Flow rate : 1.0 mL/min

Compound Dexamethasone Acetate Cream – 复方地塞米松乳膏

Dexamethasone (100122-200304) – Method number WA118

Assay

Internal standard solution: dissolve a quantity of methyltestosterone CRS in methanol to produce a solution of 0.20 mg/mL.

Reference solution: Accurately weigh about 13 mg of dexamethasone acetate CRS in a 50 mL volumetric flask, dissolve and dilute with methanol to volume, mix well. Accurately measure 5 mL of this solution and the internal standard solution in a 50 mL volumetric flask, dilute with methanol to volume, mix well and use as the reference solution.

Test solution: Accurately weigh about 1.8 g of the substance in a 50 mL volumetric flask, add a quantity of methanol. Heat in a water bath at 80 °C until dissolved, allow to cool to room temperature. Accurately add 5 mL of the internal standard solution and dilute with methanol to volume. Mix well and keep in ice bath for 2 hours, filter immediately and use the filtrate as the test solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (990967-902)
- Mobile phase: methanol:water = 70:30

Compound Glycyrrhiza Oral Solution – 复方甘草口服溶液

Morphine – Method number WA282

Assay

Test solution: Using a column packed with octadecylsilane bonded silica gel, wash the column with 15 mL of a mixture of methanol-water (3:1) followed by 5 mL of water, then wash the column with an ammonia solution of about pH 9 until the eluent has about pH 9. Treat a quantity ultrasonically for 10 minutes and mix well. Accurately apply 0.5 mL to the washed column, add drop-wise a quantity ammonia TS to adjust the solution in the column to about pH 9, mix well, rinse with 20 mL of water when no more solvent elutes. Elute with 5 % acetic acid solution, collect the eluent in a 5 mL volumetric flask to volume, mix well and use as the test solution.

Reference solution: Dissolve and dilute an accurately weighed quantity of morphine CRS in a 5 % acetic acid solution to produce the reference solution of 0.01 mg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX Eclipse XDB-C8 4.6×150mm, 5 µm (993967-906)
- Mobile phase: 0.05 mol/L potassium dihydrogen phosphate:0.0025 mol/L sodium heptanesulfonate solution:acetonitrile=18:18:5

Compound Sulfamethoxazole oral suspension

Sulfamethoxazole (100025-199503), Trimethoprim (100031-200304) – Method number WA121
复方磺胺甲噁唑口服混悬液

Assay

Test solution

measure accurately 5 mL of the well-mixed suspension to a 100 mL volumetric flask with a “to contain” pipette, wash the inner wall of pipette with several portions of methanol, and transfer the washings to the same flask, add a quantity of methanol and shake to dissolve, dilute to volume with methanol, mix well and filter. Measure accurately 2 mL of the successive filtrate into 50 mL volumetric flask or 25 mL volumetric flask, dilute with the mobile phase to volume and mix well.

Reference solution

dissolve an accurately weighed quantity of sulfamethoxazole CRS and trimethoprim CRS with a quantity of methanol and dilute with the mobile phase to produce a solution of 0.16 mg of sulfamethoxazole and 0.032 mg of trimethoprim per mL.

Chromatographic conditions

- Column : Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: acetonitrile:0.1 % triethylamine (pH 6.30)= 20:80

Reference solution: Dissolve an accurately weighed quantity of sulfamethoxazole CRS and trimethoprim CRS with a quantity of methanol and dilute with mobile phase to produce a reference solution of 0.16 mg of sulfamethoxazole and 0.032 mg of trimethoprim per mL.

Chromatographic conditions

- Column : Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: acetonitrile:0.1 % triethylamine (pH 6.30) = 20:80
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 240 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Trimethoprim	7.88	598.1	13396	5.9	1.20

Compound Ketoconazole Cream – 复方酮康唑乳膏

Ketoconazole (0294-9801)

Clobetasol Propionate (10302-0001) – Method number WA285

Assay

Test solution: Accurately weigh about 4 g of cream and add a quantity of anhydrous ethanol. Heat in a water bath at 80 °C to dissolve the ketoconazole and clobetasol propionate, transfer thoroughly to a 50 mL volumetric flask with anhydrous ethanol, allow to cool to room temperature, dilute to volume with anhydrous ethanol and mix well. Cool in an ice bath for at least 2 hours. Filter rapidly, allow the filtrate to stand at room temperature for 15 minutes and use as the test solution.

Reference solution: Accurately weigh a quantity of ketoconazole CRS and clobetasol propionate CRS, add anhydrous ethanol to produce a reference solution of 0.8 mg of ketoconazole CRS and 20 µg of clobetasol propionate CRS per mL.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: methanol:water=74:26
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 239nm

Chromatographic system

Glycerol and Fructose Injection – 甘油果糖注射液

Glycerol Fructose (100231-200303) Sodium Chloride – Method number WA020

Assay

Internal standard solution: Accurately measure 15 mL of 1, 2-propylene glycol in a 100 mL volumetric flask, dilute to volume with mobile phase and mix well.

Test solution:

Accurately measure 5 mL of the injection fluid and 10 mL of internal standard solution in a 100 mL volumetric flask, dilute to volume with mobile phase, mix well and use as the test solution.

Reference solution: Dissolve accurately weighed quantities of sodium chloride CRS, fructose CRS and glycerol CRS in water, dilute with the mobile phase to produce a reference solution of 9, 50 and 100 mg per mL, respectively.

Chromatographic conditions

- Column: packed with strong cation-exchange resin consisting of sulfonated cross-lined styrene-divinylbenzene copolymer in the hydrogen form (HC-75H+)
- Mobile phase: 0.04 mol/L phosphoric acid solution
- Flow rate: 0.4 mL/min
- Injection volume: 10 µL
- Column temperature: 50 °C
- Detector wavelength: 200 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series thermostatted column compartment
- Agilent 1200 Series variable wavelength detector

Glipizide – 格列吡嗪

Glipizide (100281-0001) – Method number WA144

Assay

Test solution: Accurately weigh about 25 mg of the substance in a 50 mL volumetric flask, dissolve, in 25 mL of methanol, dilute with 0.1 mol/L sodium dihydrogen phosphate solution to volume, mix well and use as the test solution.

Reference solution: Accurately measure 1 mL of test solution in a 100 mL volumetric flask, dilute with mobile phase to volume, mix well and use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX XDB-C18 4.6×250 mm, 5 µm (990967-902)
- Mobile phase: 0.1 mol/L sodium dihydrogen phosphate solution (adjust pH to 6.00±0.05 with 2.0 mol/L sodium hydroxide):methanol = 60:40
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Glipizide Capsules – 格列吡嗪胶囊

Glipizide (100281-0001) – Method number WA146

Assay

Test solution: Accurately weigh 20 capsules and mix the contents of the capsules well. Accurately weigh a quantity, equivalent to about 5mg of glipizide, in a 100 mL volumetric flask, add 50 mL of methanol, treat ultrasonically for 15 minutes to dissolve the glipizide, dilute with 0.1 mol/L sodium dihydrogen phosphate solution to volume, shake well, filter and use the filtrate as the test solution.

Reference solution: Accurately weigh about 25 mg of glipizide CRS in a 50 mL volumetric flask, add a quantity of methanol, shake thoroughly to dissolve the glipizide, dilute to volume with methanol and mix well. Accurately measure 5 mL in another 50 mL volumetric flask, add 20 mL methanol and dilute with 0.1 mol/L sodium dihydrogen phosphate solution to volume, mix well and use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX XDB-C18 4.6×250 mm, 5 µm (990967-902)
- Mobile phase: 0.1 mol/L sodium dihydrogen phosphate solution (adjust pH to 6.00±0.05 with 2.0 mol/L sodium hydroxide):methanol = 60:40
- Flow rate: 1.0 mL/min

Halcinonide – 哈西奈德

Halcinonide (10146-9502)– Method number WR075

Assay

Test solution: Accurately weigh about 12.5 mg of the substance in a 25ml volumetric flask, add 19 mL of methanol to dissolve the halcinonide, dilute with water to volume, mix well and use as the test solution.

Reference solution: Accurately measure 1 mL of the test solution in a 100 mL volumetric flask, dilute with mobile phase to volume, mix well use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: methanol-water = 76:24
- Flow rate: 1.0 mL/min
- Injection volume: 20 µL
- Column temperature: 30 °C
- Detector wavelength: 240 nm

Chromatographic system

Halcinonide Membrane – 哈西奈德涂膜剂

Halcinonide (10146-9502) – Method number WA113

Assay

Test solution: Dissolve a quantity of membrane, equivalent to about 2.5 mg of halcinonide, in mobile phase in a 100 mL volumetric flask, dilute with the mobile phase to volume, mix well and use as the test solution.

Reference solution: Accurately weigh about 25 mg of halcinonide CRS in a 100 mL volumetric flask, dissolve in 74 mL of methanol, dilute with water to volume, mix well. Accurately measure 5 mL of the solution in a 50 mL volumetric flask, dilute with mobile phase to volume, mix well and use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: methanol : water =74:26

Erythromycin – 红霉素

Erythromycin (130307-200215) – Method number WR032

Assay

Test solution: Dissolve an accurately weighed quantity in methanol, dilute with a mixture of phosphate BS (pH 7.0) and methanol (15:1) to produce a test solution containing 4 mg/mL.

Reference solution: Dissolve an accurately weighed quantity in methanol, dilute with a mixture of phosphate BS (pH 7.0) and methanol (15:1) to produce a reference solution containing 0.4 mg/mL.

- Mobile phase: 0.2 mol/L ammonium phosphate BS (to 1.15 g of ammonium dihydrogen phosphate add 50 mL of water, adjust pH to 6.5 with triethylamine)-0.2 mol/L tetramethylammonium hydroxide solution (to 14.6 mL of 25 % tetramethylammonium hydroxide add 100 mL of water, adjust pH to 6.5 with phosphoric acid, dilute with water to 200 mL) -acetonitrile-water (5:20:40:35)

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: see assay
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Erythromycin Enteric-coated Tablets – 红霉素肠溶片

Erythromycin (130307-200215) – Method number WR033

Assay

Test solution: Remove the coatings from 20 tablets and grind to a fine powder. Accurately weigh a quantity of the powder, equivalent to about 0.1 g of erythromycin A, add 5 mL of methanol to dissolve the erythromycin, dilute with a mixture of phosphate BS (pH 7.0) and methanol (15:1) to produce a test solution of 4 mg/mL.

Reference solution: Repeat the procedure using erythromycin CRS to produce the reference solution.

- Mobile phase: 0.2 mol/L ammonium phosphate BS (to 1.15 g of ammonium dihydrogen phosphate add 50 mL of water, adjust pH to 6.5 with triethylamine)-0.2 mol/L tetramethylammonium hydroxide solution (to 14.6 mL of 25 % tetramethylammonium hydroxide add 100 mL of water, adjust pH to 6.5 with phosphoric acid, dilute with water to 200 mL) -acetonitrile-water (5:20:30:45)

Chromatographic conditions

- Column: ZORBAX Eclipse Plus C18 4.6×250 mm, 5 µm (959990-902)

Cyclosporine Oral Solution – 环孢素口服溶液

Cyclosporine (30495-200202)– Method number WR066

Assay

Test solution: Dissolve an accurately weighed quantity in a mixture of methanol-chloroform (4:1) to produce the test solution of 1 mg/mL.

Reference solution: Repeat the procedure using cyclosporine CRS to produce the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: acetonitrile-water-phosphoric acid (46:54:0.25)
- Flow rate: 1.0 mL/min
- Injection volume: 3 µL
- Column temperature: 30 °C
- Detector wavelength: 210 nm

Inosine Capsules – 肌昔胶囊

Inosine – Method number WA054

Assay

Test solution: Grind the contents of the capsules to a fine powder. Accurately weigh a quantity of the powder, equivalent to about 0.1g of inosine, in a 100 mL volumetric flask, add about 70 mL of water, shake thoroughly to dissolve the inosine, dilute with water to volume and mix well. Filter and accurately measure 2 mL of the filtrate in a 100 mL volumetric flask, dilute with water to volume, mix well and use as the test solution.

Reference solution: Repeat the procedure using inosine CRS to produce the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)
- Mobile phase: water : methanol =90:10
- Flow rate: 1.0 mL/min

Pefloxacin Mesylate Capsules – 甲磺酸培氟沙星胶囊

Pefloxacin (130459-200301) – Method number WA031

Assay

Test solution: Protect from light throughout the procedure. Mix the contents of the capsules, accurately weigh a quantity of the contents, equivalent to about 100 mg of pefloxacin, in a 200 mL volumetric flask, add a quantity of 0.1 mol/L hydrochloride acid to dissolve the pefloxacin, dilute to volume, mix well and filter. Dilute an accurately measured quantity of the filtrate with water to produce a test solution of 20 µg of pefloxacin per mL.

Reference solution: Dissolve an accurately weighed quantity of pefloxacin CRS in water and dilute to produce a reference solution of 20 µg of pefloxacin per mL.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: 0.04 mol/L potassium dihydrogen phosphate: acetonitrile:0.05 mol/L tetrabutylammonium bromide(adjust pH to 2.5 with phosphoric acid) = 80:10:10
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 277 nm

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

The chromatogram of the reference solution---HPLC1\WA031\001-0101

The chromatogram of the test solution--- HPLC1\WA031\002-0201

Pefloxacin Mesylate Tablets – 甲磺酸培氟沙星片

Pefloxacin (130459-200301) – Method number WA029

Assay

Test solution: Protect from light throughout the procedure. Remove the coatings from 20 tablets and grind to a fine powder. Accurately weigh a quantity of powder, equivalent to about 100 mg of pefloxacin, in a 200 mL volumetric flask, add 0.1 mol/L hydrochloride acid and dilute to volume, mix well and filter. Accurately measure a quantity of the filtrate to produce a test solution of 20 µg of pefloxacin per mL.

Reference solution: Dissolve an accurately weighed quantity of pefloxacin CRS in water and dilute to produce a reference solution of 20 µg of pefloxacin per mL.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: 0.04 mol/L potassium dihydrogen phosphate: acetonitrile: 0.05 mol/L tetrabutylammonium bromide (adjust pH to 2.5 with phosphoric acid) = 80:10:10

Pefloxacin Mesylate Injection – 甲磺酸培氟沙星注射液

Pefloxacin (130459-200301) – Method number WA030

Assay

Test solution: Protect from light throughout the procedure. Dilute an accurately measured quantity of the injection fluid with water to produce a test solution of 20 µg of pefloxacin per mL.

Reference solution: Repeat the procedure using an accurately weighed quantity of pefloxacin CRS to produce the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: 0.04 mol/L potassium dihydrogen phosphate: acetonitrile:0.05 mol/L tetrabutylammonium bromide (adjust pH to 2.5 with phosphoric acid) = 80:10:10

Metronidazole – 甲硝唑

Metronidazole (100191-200305) 2-methyl-5-nitroimidazole (ARCOS) – Method number WA021

Assay

Test solution: Accurately weigh about 100 mg, dissolve in methanol, dilute to 100 ml and mix well. Accurately measure a quantity, dilute with mobile phase to produce a test solution of 0.1 mg/mL.

Reference solution: Dissolve an accurately weigh quantity of about 25 mg of 2-methyl-5-nitroimidazole CRS in methanol, dilute to 100 mL and mix well. Accurately measure a quantity and dilute with mobile phase to produce a reference solution of 1 µg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX XDB-C18 4.6×250 mm, 5 µm (990967-902)
- Mobile phase: methanol : water = 20:80
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 300 nm

Chromatographic system

- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Metronidazole Capsules – 甲硝唑胶囊

2-methyl-5-nitroimidazole (ARCOS) – Method number WA026

Assay

Test solution: Grind the contents to a fine powder and mix well. Accurately weigh quantity of the powder, equivalent to about 0.2g metronidazole, in a 100 mL volumetric flask, add a quantity water, shake to dissolve the metronidazole, dilute with water to volume and shake well. Filter and transfer 5 mL of filtrate in a 100 mL volumetric flask, dilute with water, shake well and use as the test solution.

Reference solution: Dissolve an accurately weighed quantity of about 25 mg of 2-methyl-5-nitroimidazole in methanol, dilute to 100 mL and mix well. Accurately measure a quantity and dilute with water to produce a reference solution of 1 µg/mL.

Chromatographic conditions

Metronidazole Suppositories – 甲硝唑栓

2-methyl-5-nitroimidazole (ARCOS) – Method number WA025

Assay

Test solution: Accurately weigh 10 suppositories and cut into pieces. Dissolve an accurately weighed quantity, equivalent to about 0.1g of metronidazole, with a quantity of mobile phase in 100 mL volumetric flask on a water bath of 70 °C, shake to dissolve the metronidazole. Allow to cool, dilute with mobile phase and mix well. Put in an ice bath for 1.5 hours, filter and transfer 5 mL of the filtrate to a 50 mL volumetric flask. Dilute with water to volume, mix well and use as the test solution.

Reference solution: Dissolve an accurately weighed quantity of about 25 mg of 2-methyl-5-nitroimidazole in methanol, dilute to 100 mL and mix well. Accurately measure a quantity and dilute with water to produce a reference solution of 1 µg/mL.

Codeine Phosphate and Platycodon Tablets – 可待因桔梗片

Codeine phosphate (171203-200303) – Method number WA241

Assay

Test solution: Accurately weigh 20 tablets and grind to a fine powder. Accurately weigh a quantity of the powder, equivalent to about 12 mg of codeine phosphate, in a 50 mL volumetric flask, add 2.5 mL of water and treat ultrasonically until dissolved. Add a quantity of methanol, treat ultrasonically for 10 minutes to dissolve the codeine phosphate, allow to cool, dilute with methanol to volume, shake thoroughly and filter. Accurately measure 2 mL of the filtrate in a 10 mL volumetric flask, dilute with mobile phase to volume, mix well and use as the test solution.

Reference solution: Dissolve an accurately weighed quantity of codeine phosphate CRS in mobile phase to produce a reference solution of about 48 µg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)
- Mobile phase: acetonitrile : 0.05 mol/L potassium dihydrogen phosphate (adjust pH to 3.0 with phosphoric acid) = 15:85

The chromatogram of the test solution--- HPLC2WR158N005-0501

Constituents (Test solution)	Ret Time (min)	Area (mAU*s)	N	Rs	USP T _r
Impurity1	3.25	7250	6984	/	1.11
Clarithromycin	6.92	1091.1	3864	12.3	/
Impurity2	10.03	24.5	9863	7.3	0.94

Clarithromycin Granules – 克拉霉素颗粒

Clarithromycin (30356-200403) – Method number WA255

Assay

Test solution: Grind to a fine powder, accurately weigh a quantity of the powder, equivalent to about 0.35 mg of clarithromycin, in a 1 mL volumetric flask, dilute with mobile phase to volume, mix well and use as the test solution.

Reference solution: Repeat the procedure using clarithromycin CRS to produce the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX Bonus-RP 4.6×250 mm, 5 µm (880668-901)
- Mobile phase: acetonitrile: phosphate BS (dissolve 9.11 g potassium dihydrogen phosphate in water, and dilute with water to 1000 mL, add 2 mL of triethylamine, adjust pH to 5.5 with phosphoric acid) = 40:60
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 45 °C
- Detector wavelength: 210 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Clarithromycin Tablets – 克拉霉素片

Clarithromycin (30356-200403) – Method number WR158

Assay

Test solution: Accurately weigh 10 tablets and grind to a fine powder. Dissolve an accurately weighed quantity of the powder in mobile phase and dilute to produce a solution of 0.35 mg/mL. Filter and use the filtrate as the test solution.

Reference solution: Repeat the procedure using clarithromycin CRS to produce the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX XDB-C18 4.6×250 mm, 5 µm (990967-902)
- Mobile phase: acetonitrile: phosphate BS(dissolve 9.11 g of potassium dihydrogen phosphate in water and dilute to 1000 mL, add 2 mL of triethylamine, adjust pH to 5.5 with phosphoric acid) = 40:60
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL

Clarithromycin Tablets – 克拉霉素片

Clarithromycin (30356-200403) – Method number WR158

Assay

Test solution: Grind the tablets to a fine powder. Dissolve an accurately weighed quantity of the powder in mobile phase and dilute to produce a solution of 1 mg/mL. Filter and use the filtrate as the test solution.

Reference solution: Accurately measure 0.5 mL of the test solution in a 10 mL volumetric flask, dilute with mobile phase to volume, mix well and use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX XDB-C18 4.6×250 mm, 5 µm (990967-902)
- Mobile phase: acetonitrile: phosphate BS(dissolve 9.11 g of potassium dihydrogen phosphate in water and dilute to 1000 mL, add 2 mL of triethylamine, adjust pH to 5.5 with phosphoric acid) = 40:60
- Flow rate: 1.0 mL/min
- Injection volume: 20 µL
- Column temperature: 45 °C
- Detector wavelength: 210 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series thermostated column compartment

Clotrimazole Oral Pellices – 克霉唑口腔药膜

Clotrimazole (100037-200306) – Method number WR160

Assay

Test solution: Accurately weigh 20 tablets and grind to a fine powder. Accurately weigh a quantity of the powder, equivalent to about 12.5 mg of clotrimazole, in a 25 mL volumetric flask, add a quantity of methanol, treat ultrasonically for 10 minutes until the clotrimazole dissolves, allow to cool to room temperature, dilute with methanol to volume, shake well, filter and use the filtrate as the test solution.

Reference solution: Repeat the procedure using clotrimazole CRS to produce the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX Extend C18 4.6×250 mm, 5 µm (770450-902)
- Mobile phase: phosphate solution (dissolve 4.35 g of dipotassium hydrogen phosphate, dilute to 1000 mL with water):methanol = 20:80
- Flow rate: 1.0 mL/min Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 254 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Clotrimazole	7.43	566.3	9221	/	1.15

Clotrimazole Solution – 克霉唑溶液

Clotrimazole (100037-200306) – Method number WR161

Assay

Test solution: Accurately measure 2 mL of the solution in a 50 mL volumetric flask and dilute with methanol to volume, shake well and use as the test solution.

Reference solution: Dissolve an accurately weighed quantity of clotrimazole CRS in methanol to produce a reference solution of 0.6 mg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX Extend C18 4.6×250 mm, 5 µm (770450-902)
- Mobile phase: phosphate solution (dissolve 4.35 g of dipotassium hydrogen phosphate, dilute to 1000 mL with water):methanol = 20:80
- Flow rate: 1.0 mL/min

Clotrimazole Ointment – 克霉唑软膏

Clotrimazole (100037-200306) – Method number WA058

Assay

Test solution: Mix the cream well. Accurately weigh a quantity of the cream, equivalent to about 12.5 mg of clotrimazole, into a 25 mL volumetric flask, add a quantity of methanol, heat on a water bath at 50 °C, shake until the clotrimazole dissolves, allow to cool to room temperature, dilute with methanol to volume, shake well, put in an ice-water bath for 2 hours, filter immediately, allow to reach room temperature and use the filtrate as the test solution.

Reference solution: Repeat the procedure using clotrimazole CRS to produce the reference solution.

Chromatographic conditions

- Column : Agilent ZORBAX Extend-C18 4.6×250 mm, 5 µm (770450-902)
- Mobile phase: phosphate solution (dissolve 4.35 g dipotassium hydrogen phosphate and dilute to 1000 mL with water): methanol = 20:80

Ribavirin – 利巴韦林

Ribavirin (629-200202) – Method number WR034

Assay

Test solution: Dissolve a quantity in mobile phase to produce a test solution of 0.4 mg/mL.

Reference solution: Dissolve a quantity in mobile phase to produce a reference solution of 4 µg/mL.

Chromatographic conditions

- Column: packed with hydrogen cation- exchange resin HC-75H+
- Mobile phase: water (adjust pH to 2.5±0.1 with dilute sulfate acid)
- Flow rate: 0.4 mL/min
- Injection volume: 20 µL
- Column temperature: 80 °C
- Detector wavelength: 207 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser

Ribavirin Injection – 利巴韦林注射液

Ribavirin (629-200202) – Method number WR037

Assay

Test solution: Dilute an accurately measured quantity with mobile phase to produce the test solution containing 50 µg/mL.

Reference solution: Repeat the procedure using ribavirin CRS dried to constant weight at 105 °C to produce the reference solution.

Chromatographic conditions

- Column: packed with hydrogen cation- exchange resin
- Mobile phase: water (adjust pH to 2.5±0.1 with dilute sulfate acid)
- Flow rate: 0.4 mL/min
- Injection volume: 20 µL
- Column temperature: 80 °C
- Detector wavelength: 207 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series thermostated column compartment

Ribavirin Injection – 利巴韦林注射液

Ribavirin (629-200202) – Method number WR037

Assay

Test solution: Dilute an accurately measured quantity of the injection fluid with mobile phase to produce the test solution containing 0.4 mg/mL.

Reference solution: Dilute an accurately measured quantity of the injection fluid with mobile phase to produce the reference solution containing 4 µg/mL.

Chromatographic conditions

- Column: packed with hydrogen cation-exchange resin HC-75H+
- Mobile phase: water (adjust pH to 2.5±0.1 with dilute sulfate acid)
- Flow rate: 0.4 mL/min
- Injection volume: 20 µL
- Column temperature: 80 °C
- Detector wavelength: 207 nm

Rifampicin – 利福平

Rifampicin (130496-2000010) – Method number WR162

Assay

Test solution: Dissolve an accurately weighed quantity of the substance in acetonitrile to produce the test solution of 1 mg/mL.

Reference solution: Dissolve an accurately weighed quantity of rifampicin CRS in acetonitrile to produce the reference solution of 0.01 mg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX XDB-C8 4.6×150mm, 5 µm (993967-906)
- Mobile phase: 75 mM potassium dihydrogen phosphate: 1 M citric acid : methanol : acetonitrile = 40:4:28:28
- Flow rate: 1.0 mL/min Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 254 nm

Chromatographic system

Rifampicin Capsules – 利福平胶囊

Rifampicin (130496-2000010) – Method number WR041

Assay

Test solution: Accurately weigh a quantity of well-mixed contents, equivalent to about 80 mg of rifampicin, add acetonitrile to produce a solution of 0.8 mg/mL. Filter through a millipore membrane (0.45 µm), accurately measure a quantity of the filtrate in a mixture of acetonitrile-water (1:1) to produce the test solution of 0.08 mg/mL.

Reference solution: Produce the reference solution using a quantity of rifampicin CRS, in which concentration is equivalent to the test solution.

Chromatographic conditions

- Column: Agilent ZORBAX XDB-C8 4.6×150mm, 5 µm (993967-906)
- Mobile phase: 75 mM potassium dihydrogen phosphate: 1 M citric acid:methanol: acetonitrile = 40:4:28:28
- Flow rate: 1.0 mL/min

Benproperine Phosphate Granules – 磷酸苯丙哌林颗粒

Benproperine Phosphate (0237-9701) – Method number WA228

Assay

Test solution: Grind the contents to a fine powder and mix well. Accurately weigh a quantity of the powder, equivalent to about 20 mg of benproperine phosphate, in a 50 mL volumetric flask, dissolve the benproperine phosphate in 20 mL of water, add 2.5 mL of 2 % sodium hydroxide solution, shake for 1 minute until a white precipitate is produced, add 10 ml of 4 % phosphoric acid solution to make the precipitate disappear, dilute with water to volume, mix well, filter and use the filtrate as the test solution.

Reference solution: Repeat the procedure using benproperine phosphate CRS to produce the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)
- Mobile phase: methanol: 0.1 M ammonium acetate BS (dissolve 7.7 g of ammonium acetate in 800 mL of water, adjust pH to 3.3 with glacial acetic acid, add water to 1000 mL) = 65:35
- Flow rate: 1.0 mL/min
- Injection volume: 5 µL
- Column temperature: 30 °C
- Detector wavelength: 270 nm

Benproperine Phosphate Oral Solution – 磷酸苯丙哌林口服液

Benproperine Phosphate (0237-9701) – Method number WA227

Assay

Test solution: Accurately measure 2 mL of the solution in a 100mL volumetric flask, dilute with a mixture of methanol-water (70:30) to volume and mix well. Accurately measure 5 mL in a 50 mL volumetric flask, dilute with a mixture of methanol-water (70:30) to volume, mix well and use as the test solution.

Reference solution: Dilute a quantity of benproperine phosphate CRS with a mixture of methanol-water (70:30) to produce the reference solution containing 0.4 mg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)
- Mobile phase: methanol: 0.1 M ammonium acetate BS (dissolve 7.7 g of ammonium acetate in 800 mL of water, adjust pH to 3.3 with glacial acetic acid, add water to 1000 mL) = 65:35

Salbutamol Sulfate Sustained-release Capsules

Salbutamol sulfate (10328-0002) – Method number WA322

硫酸沙丁胺醇缓释胶囊

Assay

Test solution: Grind the contents to a fine powder. Accurately weigh a quantity of the powder, equivalent to about 8 mg of salbutamol, in a 100 mL volumetric flask, add a quantity of 0.1 mol/L dilute hydrochloric acid, treat ultrasonically for 15 minutes to dissolve the salbutamol sulfate, allow to cool, dilute with 0.1 mol/L dilute hydrochloric acid to volume, mix well, filter and use the filtrate as the test solution.

Reference solution: Repeat the procedure using salbutamol sulfate CRS to produce the reference solution of 80 µg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)
- Mobile phase: methanol:0.005 mol/L ammonium biphosphate solution (pH=3.0) = 20:80

Compound Miconazole Nitrate Cream – 咪康唑氯倍他索乳膏

Miconazole nitrate (10213-9903)

Clobetasol propionate (10302-0001) – Method number WA276

Assay

Internal standard solution: Measure 0.4 mL of dibutyl phthalate in a 100 mL volumetric flask, dilute with methanol to volume, mix well and use as internal standard solution.

Test solution: Accurately weigh about 2.5 g in a beaker, accurately add 1 mL of internal standard solution. Add 20 mL of methanol, heat in a water bath at 80 °C, stirring occasionally until the cream is completely dissolved, cool on an ice-water bath until the base is completely frozen, filter and extract with 15 and 10 ml of methanol, combine the filtrate and washings in a 50 ml volumetric flask, add methanol to volume and mix well. Freeze for 2 hours, filter immediately and use the filtrate as the test solution.

Reference solution: Produce a reference solution of 1 mg of miconazole nitrate and 25 µg of clobetasol propionate per mL using miconazole nitrate CRS and clobetasol propionate CRS.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: 0.5 % ammonium acetate solution: acetonitrile: methanol = 24:38:38
- Flow rate: 1.0 mL/ min

Naproxen and Codeine Phosphate Tablets – 萘普待因片

Naproxen (100198-0002) Codeine phosphate (171203-200303) – Method number WA195

Assay

Test solution: Accurately weigh 20 tablets and grind to a fine powder. Accurately weigh a quantity of powder, equivalent to about 150 mg naproxen and 15 mg codeine phosphate respectively, in a 50 mL volumetric flask, add a quantity of 75 % methanol solution, treat ultrasonically for 10 minutes, dilute with 75 % methanol solution to volume, shake thoroughly and filter. Accurately measure 3 mL of the filtrate in a 10 mL volumetric flask, dilute with 75 % methanol solution to volume, mix well and use as the test solution.

Reference solution: Dissolve an accurately weighed quantity of naproxen CRS and codeine phosphate CRS in 75 % methanol solution to produce the reference solution of 0.9 mg naproxen and 0.09 mg codeine phosphate per mL.

Chromatographic conditions

- Column: Agilent ZORBAX Eclipse XDB C8 4.6×150mm, 5 µm (993967-906)
- Mobile phase: 0.05 mol/L potassium dihydrogen phosphate: methanol:tetrahydrofuran = 45:55:0.4
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C

Assay

Test solution: Protect from light throughout the procedure. Accurately weigh a quantity of the substance, equivalent to about 50 mg of naproxen, in a 50ml volumetric flask, melt by warming on a water bath, cool to room temperature, dilute with methanol to volume, heat on a water bath at 50-60 °C and shake well. Allow to stand for 10 minutes and cool to room temperature. After freezing in refrigerator (-18 °C) for 1 hour, filter immediately, discard the initial filtrate and cool to room temperature. Accurately measure 25 mL of the successive filtrate in a 50 mL volumetric flask, dilute with mobile phase to volume, mix well, filter and use the filtrate as the test solution.

Reference solution: Dissolve a quantity of 6-methoxy-2-acetonaphthone CRS in mobile phase to produce a reference solution of the known impurity of 50 µg/mL. Accurately measure 1 mL each of test solution and of the reference solution of the impurity in a 100 mL volumetric flask, dilute with mobile phase to volume, mix well and use as the reference solution, containing 5 mg naproxen and 0.5 mg 6-methoxy-2-acetonaphthone CRS per mL.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: methanol-0.01 mol/L potassium dihydrogen phosphate solution (75:25) (adjust pH to 3.0 with phosphoric acid)
- Flow rate: 1.0 mL/ min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 240 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Nimodipine Dispersible Tablets – 尼莫地平分散片

Nimodipine (10270-0002) – Method number WA247

Assay

Test solution: Accurately weigh 20 tablets and grind to a fine powder. Accurately weigh a quantity of the powder, equivalent to about 10 mg of nimodipine, in a 50 mL volumetric flask, add a quantity of mobile phase, treat ultrasonically to dissolve the nimodipine, dilute to volume, mix well and filter. Accurately measure 5 mL of the filtrate in a 50 mL volumetric flask, dilute with mobile phase to volume, mix well and use as the test solution.

Reference solution: Dissolve an accurately weighed quantity of nimodipine CRS in mobile phase to produce the reference solution of 20 µg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)

Phenoxymethylpenicillin Potassium – 青霉素V钾

Benzylpenicillin K (0437-9501)

Phenoxymethylpenicillin potassium (0437-9501) – Method number WR071

Assay

Test solution: Dissolve an accurately weighed quantity of the substance in phosphate BS (to 125 mL of 0.2 mol/L potassium dihydrogen phosphate solution, add 250 mL water, mix well, adjust pH to 6.5 with sodium hydroxide, dilute with water to 500 mL) and dilute to produce the test solution of 2.5 mg of phenoxymethylpenicillin potassium per mL.

Reference solution: Transfer 1 mL of the test solution to a 100 mL volumetric flask, add phosphate BS (prepared as described above) to volume, mix well and use as the reference solution. Dissolve 10 mg each of benzylpenicillin K CRS and phenoxymethylpenicillin potassium CRS in phosphate solution in a 10 mL volumetric flask, dilute to volume, mix well and use for the system suitability test.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: water-acetonitrile-acetic acid = 60:40:1
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 268 nm

Phenoxymethylpenicillin Potassium Tablets – 青霉素V钾片

Phenoxymethylpenicillin Potassium (0437-9501) – Method number WR072

Assay

Test solution: Accurately weigh 10 tablets and grind to a fine powder. Accurately weigh a quantity of the powder, equivalent to about 50 mg of phenoxymethylpenicillin, in a 50 mL volumetric flask, add phosphate solution (to 125 mL of 0.2 mol/L potassium dihydrogen phosphate solution, add 250 mL water, mix well, adjust pH to 6.5 with sodium hydroxide, dilute with water to 500 mL) to volume and mix well, filter and use the filtrate as the test solution.

Reference solution: Produce a reference solution using phenoxymethylpenicillin potassium CRS, in which the concentration is equivalent to the test solution.

Chromatographic conditions

Triamcinolone Acetonide and Econazole Nitrate Cream

Triamcinolone acetonide (100055-200302)

曲安奈德益康唑乳膏

Assay

Internal standard solution: dissolve a quantity of ethyl p-hydroxybenzoate in methanol to produce a solution of 4.4 mg/mL, mix well.

Test solution: Accurately weigh about 1.25 g in a 25 mL volumetric flask, add 2 mL of tetrahydrofuran, shake for 1 minute, accurately add 5 mL of internal standard solution, dilute with methanol to volume, mix well, filter and use the filtrate as the test solution.

Reference solution: Accurately weigh about 15.6 mg triamcinolone acetonide CRS and 31.2 mg benzoic acid CRS in a 25 mL volumetric flask, dilute with methanol to volume and mix well. Accurately weigh about 12.5 mg of econazole nitrate CRS, accurately add 2 mL of the solution prepared above, 5 mL of internal standard solution and 2 mL of tetrahydrofuran, dilute with methanol to 25 mL, mix well and use as the reference solution.

• Mobile phase:

Huperzine A Tablets – 石杉碱甲片

Huperzine-A (100243-200401) – Method number WA033

Assay

Test solution: Accurately weigh 20 tablets and grind to a fine powder. Accurately weigh a quantity of the powder, equivalent to about 0.1 mg of huperzine A, in a 10 mL volumetric flask, add a quantity of 0.01 mol/L hydrochloric acid solution and treat ultrasonically to dissolve the huperzine A, dilute with 0.01 mol/L hydrochloric acid solution to volume, shake thoroughly, filter and use the filtrate as the test solution.

Reference solution: Repeat the procedure using huperzine A CRS to produce the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)
- Mobile phase: acetonitrile:phosphate buffer (dissolve potassium dihydrogen phosphate 2.72 g in 1000 mL of water, adjust to pH 2.5 with phosphoric acid) = 14:86
- Flow rate: 1.0 mL/ min

Tinidazole Capsules – 替硝唑胶囊

Tinidazole (10336-0001) – Method number WA208

Assay

Test solution: Accurately weigh a quantity of the powdered and well-mixed contents, equivalent to about 30 mg of tinidazole in a 25 mL volumetric flask, add a quantity of mobile phase and shake to dissolve the tinidazole. Dilute to volume with mobile phase, mix well and filter. Accurately measure 5 mL of the filtrate, in a 50 mL volumetric flask, dilute to volume with mobile phase, mix well and use as the test solution.

Reference solution: Repeat the procedure using tinidazole CRS to produce the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX XDB-C18 4.6×250 mm, 5 µm (990967-902)
- Mobile phase: 0.05 mol/L potassium dihydrogen phosphate (adjust pH to 3.5 with phosphoric acid) - methanol (75:25)
- Flow rate: 1.0 mL/min

Cefalexin Tablets – 头孢氨苄片

Cefalexin (130408-200209) – Method number WR147

Assay

Test solution: Dissolve a quantity of the powder in mobile phase to produce a solution of 0.4 mg/mL, filter and use the filtrate as the test solution.

Reference solution: Dilute an accurately measured quantity of the test solution with mobile phase to produce the reference solution of 4 µg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)
- Mobile phase: water:methanol: 3.86 % sodium acetate solution: 4 % acetic acid solution = 742:240:15: 3
- Flow rate: 1.0 mL/ min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 254 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Cefdinir – 头孢地尼胶囊

Cefdinir (130502-200401) – Method number WA012

Assay

Test solution: Accurately weigh a quantity of the well-mixed contents, equivalent to about 50 mg of cefdinir, in a 250 mL amber volumetric flask, dissolve in phosphate BS (pH 7.0), dilute to volume with the mobile phase, mix well, filter and use the filtrate as the test solution.

Reference solution: Repeat the procedure using cefdinir CRS to produce the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX Eclipse XDB-C18 4.6×250 mm, 5 µm (990967-902)
- Mobile phase: 0.4 ml of 0.1 mol/L disodium edetate solution in the mixture of 0.25 % tetramethylammonium hydroxide solution (adjust pH value to 5.5 with phosphoric acid)-acetonitrile-methanol (900:60:40).
- Column temperature: 40 °C
- Detector wavelength: 254 nm
- Flow rate: 1.0 mL/ min
- Injection volume: 10 µL

Cefdinir – 头孢地尼

Cefdinir (130502-200401) – Method number WA011

Assay

Test solution: Dissolve a quantity of the substance in phosphate BS (pH 7.0) and dilute with mobile phase to produce the test solution of 1.5 mg/mL.

Reference solution: Accurately measure 1 mL in a 100 mL volumetric flask, dilute to volume with mobile phase, mix well and use as the reference solution. Dissolve a quantity cefdinir CRS in phosphate BS (pH 7.0), and dilute with mobile phase to produce a solution of 1.5 mg/mL, heat in a water bath for 30 minutes, allow to cool and use for the system suitability test.

- Mobile phase:
A: 0.4 mL of 0.1 mol/L disodium edetate solution in 1000 mL of 0.25 % tetramethylammonium hydroxide solution (adjust pH value to 5.5 with phosphoric acid)
B: 0.4 mL of 0.1 mol/L disodium edetate solution in the mixture of 0.25 % tetramethylammonium hydroxide solution (adjust pH value to 5.5 with phosphoric acid) - acetonitrile - methanol (500:300:200)
Gradient: 0 min, 95 %A;

Cefuroxime Axetil Capsules – 头孢呋辛酯胶囊

Cefuroxime Axetil (0492-200001) – Method number WR011

Assay

Test solution: Dissolve an accurately weighed quantity of the finely powdered and well-mixed contents, equivalent to about 125 mg of cefuroxime, in 25 mL of methanol by shaking intensively. Dilute with mobile phase to 100 mL, mix well and filter. Transfer 5 mL of the filtrate to a 25 mL volumetric flask, dilute with mobile phase to volume and use as the test solution.

Reference solution: Repeat the procedure using cefuroxime axetil CRS to produce the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: 0.2 mol/L ammonium dihydrogen phosphate solution-methanol (50:50).
- Flow rate: 1.0 mL/min

Cefradine – 头孢拉定

Cefradine (130427-200306) – Method number WR140

Assay

Test solution: Dissolve a quantity in mobile phase to produce the test solution of 1 mg/mL.

Reference solution: Dissolve a quantity in mobile phase to produce the reference solution of 5 µg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: water: methanol: 3.86 % sodium acetate solution: 4 % solution of acetic acid = 1564:400:30:6
- Flow rate: 1.0 mL/ min
- Injection volume: 20 µL
- Column temperature: 30 °C
- Detector wavelength: 254/220 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Cefathiamidine – 头孢硫脒

Cefathiamidine (130523-200201) – Method number WA014

Assay

Test solution: Add mobile phase to a quantity of the substance to produce the test solution of 0.5 mg/mL.

Reference solution: Dilute an accurately measured quantity of the test solution with mobile phase to produce the reference solution containing 5 µg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: BS (dissolve 2.76 g of anhydrous disodium hydrogen phosphate and 1.29 g of citric acid in 1000 ml of water) : acetonitrile = 80:20
- Flow rate: 1.0 mL/ min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 254 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler

Cefazolin Sodium – 头孢唑林钠

Cefazolin Sodium (0421-9603) – Method number WR013

Assay

Test solution: Accurately weigh about 50mg of the substance in a 20 mL volumetric flask, dissolve in mobile phase, dilute to volume, mix well and use as the test solution.

Reference solution: Accurately measure 1 mL of the test solution in a 100 mL volumetric flask, dilute to volume with mobile phase, mix well and use as the reference solution. Dissolve about 10 mg in 10 mL of 0.2 % sodium hydroxide solution. Allow to stand for 15-30 minutes. Accurately measure 1 mL of the solution and dilute to 20 mL with mobile phase. Mix well and use for system suitability test.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6×50mm, 5 µm (880975-902)
- Mobile phase: A: 1.454 % disodium hydrogen phosphate and 0.353 % potassium dihydrogen phosphate B: acetonitrile

Tretinoin Cream – 维A酸乳膏

Tretinoin (100307-200201) – Method number WA189

Assay

Test solution: Accurately weigh a quantity of the cream, equivalent to about 1 mg of tretinoin, in a small beaker, add 15 mL of isopropanol and shake well. Transfer with separate portions of methanol to a 100 mL volumetric flask, treat ultrasonically for 10 minutes, allow to cool to room temperature, dilute with methanol to volume, shake well, filter and use the filtrate as the test solution.

Reference solution: Accurately weigh about 10 mg of tretinoin CRS in a 100 mL volumetric flask, dissolve in 10 mL isopropanol, dilute with methanol to volume and mix well. Accurately measure 5 mL of the solution in a 50 mL volumetric flask, dilute with methanol to volume, mix well and use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: methanol : 0.2 % glacial acetic acid = 90:10

Vitamin B6 Tablets – 维生素B6片

Pyridoxine Hydrochloride (0116-9801) – Method number WA191

Assay

Test solution: Accurately weigh 20 tablets and grind to a fine powder. Accurately weigh a quantity of the powder, equivalent to about 100 mg of vitamin B6, in a 100 mL volumetric flask, add a quantity of mobile phase, treat ultrasonically to dissolve the vitamin B6, dilute to volume with mobile phase, mix well and filter. Accurately measure 5 mL of the filtrate in 50 mL volumetric flask, dilute to volume with mobile phase, mix well and use as the test solution.

Reference solution: Repeat the procedure using pyridoxine hydrochloride CRS to produce the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: methanol:0.02 %sodium pentylsulfonate (adjust pH to 3.0 with glacial acetic acid) = 15:85
- Flow rate: 1.0 mL/ min
- Injection volume: 10 µL
- Column temperature: 30 °C

Nitroglycerin Aerosol – 硝酸甘油气雾剂

Nitroglycerin (100236-200401) – Method number WA211

Assay

Test solution: Punch a hole in the aluminum cover of the container and insert an injection needle with dry rubber tubing into the container (do not allow to come in contact with the surface of the liquid). Put the other end of the rubber tubing in a 100 mL volumetric flask containing 50 mL of mobile phase, allow the propellant to expel completely, remove the aluminum cover. Transfer the residual content to the 100 mL volumetric flask. Wash the aluminum cover and the container with mobile phase, add the washings to the same volumetric flask, dilute with mobile phase to volume, mix well, filter and use the filtrate as the test solution.

Reference solution: Dilute an accurately weighed quantity of nitroglycerin CRS with mobile phase to produce the reference solution of 0.1 mg/mL.

Chromatographic conditions

- Column: ZORBAX SB C18
4.6×250 mm, 5 µm (880975-902)
- Mobile phase:
acetonitrile:water = 50:50

Ondansetron Hydrochloride – 盐酸昂丹司琼

Ondansetron hydrochloride (100559-200301) – Method number WA168

Assay

Test solution: Dissolve an accurately weighed quantity of the substance in mobile phase to produce the test solution of 0.5 mg/mL.

Reference solution: Accurately measure a quantity of the test solution in a 100 mL volumetric flask, dilute with mobile phase to volume, mix well and use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX XDB-CN 4.6×150 mm, 5 µm (993967-905)
- Mobile phase: 0.02M sodium dihydrogen phosphate (pH 5.4): acetonitrile = 60:40
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 216 nm

Diphenhydramine Hydrochloride Tablets – 盐酸苯海拉明片

Diphenhydramine Hydrochloride (100066-199705) – Method number WA171

Assay

Test solution: Accurately weigh 20 tablets, removed the coatings and grind to a fine powder. Accurately weigh a quantity, equivalent to about 50 mg of diphenhydramine hydrochloride, in a 100 mL volumetric flask, dissolve and dilute with water to volume, mix well, filter and use the filtrate as the test solution.

Reference solution: Dissolve an accurately weighed quantity of diphenhydramine hydrochloride CRS in water to produce the reference solution of 0.5 mg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX XDB-CN 4.6×150 mm, 5 µm (993967-905)
- Mobile phase: acetonitrile: water: triethylamine (adjust pH to 6.5 by glacial acetic acid) = 50:50:0.5
- Flow rate: 1.0 mL/min
- Injection volume: 20 µL
- Column temperature: 30 °C
- Detector wavelength: 258 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser

Metformin Hydrochloride – 盐酸二甲双胍

Metformin hydrochloride (100206-200302),

Dicyanodiamide (ACROS) – Method number WR087

Assay

Test solution: Accurately weigh a quantity of the substance, add a quantity of the mobile phase, treat ultrasonically to dissolve the metformin hydrochloride and dilute with mobile phase to produce the test solution of about 0.5 mg/mL.

Reference solution: Dissolve an accurately weighed quantity of dicyanodiamide CRS in water to produce the reference solution for dicyanodiamide of about 0.1 mg/mL. Accurately measure 0.5 mL each of the test solution and reference solution in a 100 mL volumetric flask, dilute with mobile phase to volume, mix well and use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX 300-SCX 4.6×250 mm, 5 µm (880952-704)
- Mobile phase: 2.3 % ammonium dihydrogen phosphate solution (adjust pH to 3.5 with phosphoric acid)
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 40 °C
- Detector wavelength: 218 nm

Chromatographic system

Valacyclovir Hydrochloride – 盐酸伐昔洛韦

Valacyclovir (100754-200401), Aciclovir (630-200001) – Method number WA295

Assay

Test solution: Accurately weigh about 50 mg in a 100 mL volumetric flask, add a volume of 0.02 mol/L potassium dihydrogen phosphate solution to dissolve, dilute to volume and mix well. Accurately measure a quantity of the solution, dilute with the mobile phase and mix well to produce the test solution of 20 µg/mL.

Reference solution: Accurately weigh about 15 mg of aciclovir CRS in a 250 mL volumetric flask, add 5 mL of 0.1 mol/L sodium hydroxide solution to dissolve the aciclovir, dilute with water to volume and mix well. Accurately measure 1 mL of the solution in a 200 mL volumetric flask, accurately add 1 mL of the test solution, dilute with mobile phase to volume, mix well and use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)
- Mobile phase: methanol:potassium dihydrogen phosphate=20:80

Flunarizine Hydrochloride Capsules – 盐酸氟桂利嗪胶囊

Flunarizine hydrochloride (130451-200302) – Method number WR098

Assay

Test solution: Accurately weigh a quantity of the well-mixed contents of the capsules, equivalent to about 10 mg of flunarizine, in a 100 mL volumetric flask, add 10 mL of ethanol, shake thoroughly to dissolve the flunarizine hydrochloride. Dilute with hydrochloric acid solution (dilute 24 mL of dilute hydrochloric acid with water to 1000 mL) to volume, mix well and filter. Discard the initial filtrate and accurately measure 5 mL of the successive filtrate in a 50 mL volumetric flask, dilute with the hydrochloric acid solution to volume, mix well and use as the test solution.

Reference solution: Dissolve an accurately weighed quantity of flunarizine hydrochloride CRS dried to constant weight at 105 °C with 10 mL of ethanol, shake well, dilute with the hydrochloric acid solution to produce the reference solution of 12 µg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm 880975-902)

Granisetron Hydrochloride Injection – 盐酸格拉司琼注射液

Granisetron hydrochloride (10058-200301) – Method number WA175

Assay

Test solution: Accurately measure a quantity of the injection fluid and dilute with mobile phase to produce the test solution of about 60 µg of granisetron per mL.

Reference solution: Repeat the procedure using granisetron hydrochloride CRS to produce the reference solution (the conversion factor between granisetron and granisetron hydrochloride is 0.8955).

Chromatographic conditions

- Column: Agilent ZORBAX XDB-CN 4.6×150 mm, 5 µm (993967-905)
- Mobile phase: 0.05 M sodium acetate BS (containing 0.25 % vol./vol. triethylamine, adjust pH to 6.0 with glacial acetic acid); methanol = 50:50
- Flow rate: 1.0 mL/min
- Injection volume: 20 µL

Ciprofloxacin Hydrochloride – 盐酸环丙沙星

Ciprofloxacin (130451-200302) – Method number WR096

Assay

Test solution: Dissolve a quantity of the substance to produce the test solution containing 0.4 mg/mL.

Reference solution: Dissolve a quantity of the substance to produce the reference solution containing 4 µg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm 880975-902)
- Mobile phase: 0.05 mol/L citric acid solution: acetonitrile = 85:15 (adjust pH to 3.5 with triethylamine)
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 277 nm

Chromatographic system

Clonidine Hydrochloride Tablets – 盐酸可乐定片

Clonidine hydrochloride (10071-9905) – Method number WR091

Assay

Test solution: Accurately weigh 20 tablets and grind to a fine powder. Accurately weigh a quantity of the powder, equivalent to about 0.15 mg of clonidine hydrochloride, in a 50 mL volumetric flask, dissolve in a quantity of mobile phase, shake thoroughly for 30 minutes. Dilute with mobile phase to volume, filter through a millipore membrane (0.45 µm) and use the filtrate as the test solution.

Reference solution: Dilute an accurately weighed quantity of clonidine hydrochloride CRS with mobile phase to produce the reference solution of 3 µg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX XDB-C8 4.6×250 mm, 5 µm (990967-906)
- Mobile phase: 0.22 % sodium octanesulfonate: methanol: phosphoric acid (500:500:1) adjust pH to 3.0 with 1mol/L sodium hydroxide or phosphoric acid)
- Flow rate: 1.0 mL/min
- Injection volume: 50 µL
- Column temperature: 30 °C
- Detector wavelength: 220 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler

Ranitidine Hydrochloride – 盐酸雷尼替丁

Ranitidine hydrochloride (10163-0004) – Method number WR100N

Assay

Internal standard solution: Dissolve a quantity of indomethacin in methanol to produce the internal standard solution of about 0.3 mg/mL.

Test solution: Dissolve an accurately weighed quantity of ranitidine hydrochloride in 50 % methanol solution to produce an intermediate solution of 0.15 mg/mL. Accurately measure 2 mL each of the intermediate solution and the internal standard solution in a 50 mL volumetric flask, dilute with 50 % ethanol solution to volume, mix well and use as the test solution.

Reference solution: Repeat the procedure using ranitidine hydrochloride CRS to produce the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX Bonus-RP, 4.6x250mm, 5 µm (880688-901)
- Mobile phase: 0.1 mol/L ammonium acetate solution: methanol = 70:30
- Flow rate: 1.0 mL/min
- Injection volume: 20 µL
- Column temperature: 30 °C
- Detector wavelength: 320 nm

Minocycline Hydrochloride – 盐酸米诺环素

Minocycline hydrochloride (130514-200401) – Method number WA299

Assay

Test solution: Protect from light throughout the procedure. Dissolve a quantity of the substance in water to produce the test solution of 0.5 mg/mL.

Reference solution: Dilute an accurately measured quantity of the test solution with mobile phase to produce the reference solution of 5 µg/mL. Accurately weigh 10 mg of minocycline hydrochloride CRS in a 25 mL volumetric flask, add 5 mL of water to dissolve the minocycline hydrochloride, heat in boiling water bath for 60 minutes, allow to cool, dilute with water to volume, mix well and use for the system suitability test.

Chromatographic conditions

- Column: Agilent ZORBAX Eclipse XDB-C8 4.6×250 mm, 5 µm (993967-906)
- Mobile phase: 0.2 mol/L ammonium acetate solution: N,N-dimethylformamide: tetrahydrofuran = 600:398:2 (with 0.01 mol/L disodium edetate)
- Flow rate: 1.0 mL/min

盐酸曲马多缓释片

Assay

Test solution: Dissolve a quantity of the powdered tablets in mobile phase. Heat in a hot water bath and shake to dissolve the tramadol hydrochloride. Allow to cool to room temperature, dilute with mobile phase to produce a solution of 2 mg of tramadol hydrochloride per mL, mix well, filter through a millipore membrane (0.45 µm) and use the filtrate as the test solution.

Reference solution: Dilute a quantity of Z-tramadol hydrochloride CRS with mobile phase to produce the reference solution of 0.2 mg/mL. Accurately measure 1 mL of the test solution and 3 mL of the reference solution in a 100 mL volumetric flask, dilute with mobile phase to volume, mix well and use for the system suitability test.

Chromatographic conditions

- Column: Agilent ZORBAX Bonus-RP 4.6×250 mm, 5 µm (880668-901)
- Mobile phase: acetic acid-sodium acetate BS (pH 4.5) : methanol = 65:35
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C

Ofloxacin and Sodium Chloride Injection

Ofloxacin (130454-200202) – Method number WR086

氧氟沙星氯化钠注射液

Assay

Test solution: Accurately measure 15 mL in a 25 mL volumetric flask, dilute with 0.1mol/L hydrochloric acid solution to volume, and mix well. Accurately measure 2 ml in a 20 mL volumetric flask, dilute with 0.1mol/L hydrochloric acid solution to volume, mix well and use as the test solution.

Reference solution: Dissolve an accurately weighed quantity of ofloxacin CRS in 0.1 mol/L hydrochloric acid solution to produce the reference solution of 0.12 mg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX XDB-C18 4.6×250 mm, 5 µm (990967-902)
- Mobile phase: ammonium acetate sodium perchlorate solution (dissolve 4.0 g of ammonium acetate and 7.0 g of sodium perchlorate in 1300 mL of water, mix well, adjust pH to 2.2 with phosphoric acid) : acetonitrile = 75:25
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 293 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Ofloxacin Tablets – 氧氟沙星片

Ofloxacin (130454-200202) – Method number WR188

Assay

Test solution: Accurately weigh 10 tablets and grind to a fine powder. Dissolve an accurately weighed quantity of the powder, equivalent to about 0.12 g of ofloxacin, in a 100 mL volumetric flask, dissolve and dilute to volume with 0.1 mol/L hydrochloride solution, mix well and filter. Accurately measure 5 mL of the filtrate in a 50 mL volumetric flask, dilute with 0.1 mol/L hydrochloride solution to volume, mix well and use as the test solution.

Reference solution: Dissolve an accurately weighed quantity of ofloxacin CRS in 0.1 mol/L hydrochloric acid solution to produce the reference solution of 0.12 mg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq, 4.6×250 mm, 5 µm (880975-914)
- Mobile phase: ammonium acetate sodium perchloric solution (dissolve 4.0 g of ammonium acetate and 7.0 g of sodium perchloric in 1300 mL of water, adjust pH to 2.2 with phosphoric acid) : acetonitrile = 80:20
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 294 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler

Enoxacin – 依诺沙星

Enoxacin (0452-9901) – Method number WR054

Assay

Test solution: Accurately weigh about 50 mg of the substance in a 100 mL volumetric flask, dissolve in 20 mL of 0.1 mol/L hydrochloric acid solution, dilute with mobile phase to volume, mix well and use as the test solution.

Reference solution: Accurately measure a quantity and dilute with mobile phase to produce the reference solution of 5 µg of enoxacin per mL.

Chromatographic conditions

- Column: Agilent ZORBAX Bonus-RP 4.6×250 mm, 5 µm (880668-901)
- Mobile phase: 0.025 mol/L phosphoric acid solution (adjust pH to 3.0 with triethylamine) : methanol : acetonitrile = 84:8:8
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 269 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector

Enoxacin Eye Drops – 依诺沙星滴眼液

Enoxacin (0452-9901) – Method number WA093

Assay

Test solution: Dilute an accurately measured quantity of drops with mobile phase to produce a solution of 10 µg of enoxacin per mL, shake well and use as the test solution.

Reference solution: Repeat the procedure using an accurately weighed quantity of enoxacin CRS to produce the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX Bonus-RP 4.6×250 mm, 5 µm (880668-901)
- Mobile phase: 0.025 mol/L phosphoric acid solution (adjust to pH 3.0 with triethylamine): methanol : acetonitrile = 80:10:10
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 269 nm

Etoposide – 依托泊苷

Etoposide (ARCOS) – Method number WA090

Assay

Test solution: Dissolve an accurately weighed quantity of the substance in a mixture of acetonitrile and 0.02 mol/L sodium acetate BS (30:70, pH 4.0) to produce the test solution of 2 mg/mL.

Reference solution: Dissolve an accurately weighed quantity of etoposide CRS with acetonitrile to produce a solution of 2 mg/mL. Accurately measure 1 mL of this solution in a 200 mL volumetric flask, dilute with a mixture of acetonitrile and 0.02 mol/L sodium acetate BS (30:70, pH 4.0) to volume, mix well and use as the reference solution.

- Mobile phase:
A: acetonitrile : acetate BS
(dissolve 2.72 g of sodium acetate with 2000 mL of water, adjust pH to 4.0 with glacial acetic acid) (20:80)
B: acetonitrile:acetate BS (60:40)
Gradient: 0-15 min, 0 %B;
30-40 min, 60 %B;
42-45 min, 100 %B;
47-50 min, 0 B%.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Phenyl 4.6×250 mm, 5 µm (880975-912)
- Mobile phase: see assay
- Flow rate: 1.5 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C

Indometacin	9.92	3503.5	17354	/	1.06

Indometacin Suppositories – 吲哚美辛栓

Indometacin (100258-199602) – Method number WR043

Assay

Test solution: Accurately weigh 10 suppositories, cut carefully into pieces and mix well. Accurately weigh a quantity, equivalent to about 25 mg of indometacin, in a 50 mL volumetric flask, add a quantity of 50 % ethanol, heat on a water bath and treat ultrasonic to dissolve the indometacin, allow to cool to room temperature, dilute with 50 % ethanol to volume, mix well and filter. Accurately measure 5 mL of the filtrate in a 25 mL volumetric flask, dilute with 50 % ethanol to volume, mix well and use as the test solution.

Reference solution: Accurately measure 1 mL of the test solution in a 100 mL volumetric flask, dilute with 50 % ethanol to volume and use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: 0.1 M acetic acid: acetonitrile = 45:55
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 228 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Amoxicillin Sodium and Clavulanate Potassium for Injection

Amoxicillin (130409-200208), Clavulanic acid (130429-200203) – Method number WR059
注射用阿莫西林钠克拉维

Assay

Test solution: Dissolve an accurately weighed quantity of the contents in water to produce the test solution of 0.5 mg amoxicillin and 0.1 mg clavulanic acid per mL.

Reference solution: Dissolve a quantity of amoxicillin CRS and clavulanic acid CRS in water to produce the reference solution of 0.5 mg amoxicillin and 0.1 mg clavulanic acid per mL.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)
- Mobile phase: 0.01 mol/L potassium dihydrogen phosphate (pH 6.0) : acetonitrile = 96:4
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 220 nm

Aciclovir for Injection – 注射用阿昔洛韦

Aciclovir (140630-200001) – Method number WA269

Assay

Test solution: Accurately weigh a quantity of the powder, equivalent to about 50 mg of acyclovir, in a 250 mL volumetric flask, dissolve and dilute with water to volume, mix well and filter. Dilute an accurately measured quantity of the filtrate with water and mix well to produce the test solution of 20 µg of aciclovir per mL.

Reference solution: repeat the procedure using aciclovir CRS dried to constant weight at 105 °C to produce the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: methanol : water = 10:90

Ampicillin Sodium and Sulbactam Sodium for Injection

Ampicillin (0410-200004), Sulbactam (130430-200305) – Method number WR063

注射用氨苄西林钠舒巴坦钠

Assay

Test solution: Dissolve an accurately weighed quantity of the well-mixed contents in mobile phase to produce a test solution containing 0.6 mg ampicillin and 0.3 mg sulbactam per mL.

Reference solution: Dissolve an accurately weighed quantity of ampicillin CRS and sulbactam CRS in mobile phase to produce a reference solution of 0.6 mg ampicillin and 0.3 mg sulbactam per mL. Dissolve 6 mg of ampicillin CRS and 3 mg of sulbactam CRS in two separate quantities of 10 mL of 0.01 mol/L sodium hydroxide solution, allow to stand for 30 minutes, adjust to pH 4.0 ±0.1 with 1 mol/L phosphoric acid. Transfer 5 mL of each solution to a 25 mL volumetric flask, add a quantity of ampicillin CRS and sulbactam CRS (equivalent to 5 mg of ampicillin and 2.5 mg of sulbactam), dilute to volume with mobile phase, mix well and use for the system suitability test.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)
- Mobile phase: 0.02 mol/L sodium dihydrogen phosphate solution (dissolve 2.76 g of sodium dihydrogen phosphate in 950 mL of water, adjust pH to 4.0±0.1 with 1 mol/L phosphoric acid solution, dilute with water to 1000 mL, mix well) : acetonitrile = 92:8
- Flow rate: 1.0 mL/min

Potassium Dehydroandrograpolid Succinate for Injection

Dehydroandrograpolid Succinate (111598-200301) – Method number WA101
注射用穿琥宁

Assay

Test solution: Accurately weigh a quantity of the mixed contents, equivalent to about 10 mg potassium dehydroandrograpolid succinate, in a 100 mL volumetric flask, dissolve and dilute to volume with mobile phase, mix well and use as the test solution.

Reference solution: Repeat the procedure using about 10 mg of potassium dehydroandrograpolid succinate CRS dried to constant weight at 60 °C in vacuum to produce reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: methanol : 0.05 % potassium dihydrogen phosphate solution (adjust pH to 2.5 ± 0.05 with phosphoric acid) = 65:35
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C

Ganciclovir for Injection – 注射用更昔洛韦

Ganciclovir (100380-200301) – Method number WA098

Assay

Test solution: Dissolve the contents of 5 containers in mobile phase in a 250 mL volumetric flask, dilute to volume and mix well. Dilute an accurately measured quantity with mobile phase to produce the test solution containing 40 µg of ganciclovir per mL.

Reference solution: Accurately weigh about 25 mg of ganciclovir CRS dried to constant weight at 105 °C in a 25 mL volumetric flask, add 1 mL of 0.4 % sodium hydroxide solution, dilute with mobile phase to volume, mix well, dilute with mobile phase to produce the reference solution containing 40 µg of ganciclovir CRS per mL.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)
- Mobile phase: water : methanol = 95:5
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 252 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Pefloxacin Mesylate for Injection – 注射用甲磺酸培氟沙星

Pefloxacin (130459-200301) – Method number WA096

Assay

Test solution: Dissolve an accurately weighed quantity of the mixed contents in water to produce the test solution of 20 µg of pefloxacin per mL.

Reference solution: Repeat the procedure using an accurately weighed quantity of pefloxacin CRS to produce the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: 0.04 M potassium dihydrogen phosphate : acetonitrile : 0.05 M tetrabutylammonium bromide (adjust pH to 4.0 with phosphoric acid) = 80:10:10
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 277 nm

Chromatographic system

Pefloxacin	7.19	1284.2	11634	/	1.07

Ribavirin for Injection – 注射用利巴韦林

Ribavirin (130459-200301) – Method number WA097

Assay

Test solution: Accurately weigh a quantity of the mixed contents, dissolve and dilute to produce a solution of 50 µg of ribavirin per mL, mix well and use as the test solution.

Reference solution: Repeat the procedure using ribavirin CRS dried to constant weight at 105 °C to produce the reference solution.

Chromatographic conditions

- Column: hydrogen cation-exchange resin HC-75H+
- Mobile phase: water (adjust pH to 2.5±0.1 with dilute sulfate acid)
- Flow rate: 0.4 mL/min
- Injection volume: 20 µL
- Column temperature: 80 °C
- Detector wavelength: 207nm

Vindesine Sulfate for Injection – 注射用硫酸长春地辛

Vindesine sulfate – Method number WA105

Assay

Test solution: Dissolve and dilute a quantity of the contents with water to produce a solution of 0.1 mg of vindesine sulfate per mL.

Reference solution: Prepare the reference solution using a quantity of vindesine sulfate CRS, in which the concentration is equivalent to the test solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-C18 4.6×250 mm, 5 µm (880975-902)
- Mobile phase: methanol : 0.05 % dipotassium hydrogen phosphate solution (adjust to pH 6.62 with phosphoric acid) = 75:25
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 270 nm

Etimicin Sulfate for Injection – 注射用硫酸依替米星

Etimicin, Netilmicin – Method number WA324

Assay

Test solution: Dissolve an accurately weighed quantity of the contents in water to produce the test solution of 0.5 mg of etimicin per mL.

Reference solution: Repeat the procedure to produce the reference solution.

Chromatographic conditions

- Column: ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)
- Mobile phase: 1 % trifluoroacetate solution
- Flow rate: 0.6 mL/min
- Injection volume: 20 µL
- Column temperature: 20 °C
- Evaporator tube temperature: 115 °C
- Air flow rate: 3.5 mL/min

The chromatogram of the reference solution ---HPLC2WR144N008-0201

The chromatogram of the test solution ---HPLC2WR144N009-0301

Constituents (Test solution)	Ret Time (min)	Area (mAU*s)	N	Rs	USP T _f
Cefoperazone	15.55	6402.5	9351	1.9	1.12

Cefoperazone Sodium for Injection – 注射用头孢哌酮钠

Cefoperazone (130420-200304) – Method number WR145

Assay

Test solution: Dissolve a quantity of the well-mixed contents in mobile phase to produce the test solution of 0.5 mg/mL.

Reference solution: Dilute an accurately measured quantity of test solution with mobile phase to produce the reference solution of 5 µg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6x250 mm, 5 µm (880975-914)
- Mobile phase: triethylamine acetic acid solution (dissolve 1.4 mL of triethylamine and 0.57 mg of glacial acetic acid in 8 mL of water, mix well, dilute 6µL with water to 410 mL, mix well, adjust pH to 3.0±0.2 with glacial acetic acid) : acetonitrile = 82:18
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 254 nm

Chromatographic system

- Agilent 1200 Series high-performance autosampler
- Agilent 1200 Series quaternary pump with vacuum degasser
- Agilent 1200 Series thermostated column compartment
- Agilent 1200 Series variable wavelength detector
- System control through Agilent ChemStation revision B.01.01

Cefoperazone Sodium and Sulbactam Sodium for Injection

Cefoperazone (130420-200304); Sulbactam (130430-200305) – Method number WR057

注射用头孢哌酮钠舒巴坦钠

Assay

Dissolve a quantity of cefoperazone CRS and sulbactam CRS in a small amount of phosphate BS (mix 39.0 mL of 0.2 mol/L sodium dihydrogen phosphate solution with 61.0 mL of disodium hydrogen phosphate solution, adjust pH to 7.0 with phosphoric acid) and dilute with mobile phase to produce a solution containing 1 mg each of the two substances per mL. Heat for 30 minutes at 60 °C on a water bath and use for the system suitability test. Test solution: Accurately weigh a quantity of the well-mixed contents, equivalent to about 100 mg of cefoperazone, in a 200 mL volumetric flask, dissolve and dilute with mobile phase to volume, mix well and use as the test solution.

Reference solution: Dissolve about 25 mg each of cefoperazone CRS and sulbactam CRS in 2 mL of phosphate BS (prepared as described above) in a 50 mL volumetric flask, dilute to volume with mobile phase, mix well and use as the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)
- Mobile phase: 0.005 M tetrabutylammonium hydroxide solution (to 26.4 mL of 10 % tetrabutylammonium hydroxide solution or 6.6 mL of 40 % tetrabutylammonium hydroxide solution add 800 mL of water, adjust pH to 4.0 with 1 M phosphoric acid solution, dilute with water to 2000 mL) : acetonitrile (65:35)
- Flow rate: 1.0 mL/min
- Injection volume: 10 µL
- Column temperature: 30 °C
- Detector wavelength: 220 nm

Cefoperazone Sodium and Sulbactam Sodium for Injection

Cefoperazone (130420-200304); Sulbactam (130430-200305) – Method number WR057

注射用头孢哌酮钠舒巴坦钠

Assay

Test solution: Dissolve a quantity of the substance in the mobile phase to produce the test solution of 4 mg/mL.

Reference solution: Dissolve a quantity of the substance in the mobile phase to produce the reference solution of 0.04 mg/mL.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6×250 mm, 5 µm (880975-914)
- Mobile phase: 0.005 M tetrabutylammonium hydroxide solution (to 26.4 mL of 10 % tetrabutylammonium hydroxide solution or 6.6 mL of 40 % tetrabutylammonium hydroxide solution add 800 mL of water, adjust pH to 4.0 with 1 M phosphoric acid solution, dilute with water to 2000 mL) : acetonitrile (65:35)

Cefazolin Sodium for Injection – 注射用头孢唑林钠

Cefazolin Sodium (0421-9603) – Method number WR146

Assay

Test solution: Accurately weigh about 50 mg of the substance in a 20 mL volumetric flask, dissolve and dilute to volume with mobile phase, mix well and use as the test solution.

Reference solution: Accurately measure 1 mL of the test solution in a 100 mL volumetric flask, dilute with mobile phase, mix well and use as the reference solution. Dissolve about 10 mg of the contents in 10 mL of 0.2 % sodium hydroxide solution. Allow to stand for 15-30 minutes. Accurately measure 1 mL of the solution and dilute to 20 mL with mobile phase. Mix well and use for the system suitability test.

Chromatographic conditions

- Column: Agilent ZORBAX SB-Aq 4.6×50mm, 5 µm (880975-902)

Calcium Folate for Injection – 注射用亚叶酸钙

Calcium Folate – Method number WR155

Assay

Test solution: Dissolve the contents of 5 containers in water to dissolve the calcium folinate, transfer and dilute to produce a solution of 0.1 mg/mL, filter and use the filtrate as the test solution.

Reference solution: Repeat the procedure using calcium folinate CRS to produce the reference solution.

Chromatographic conditions

- Column: Agilent ZORBAX XDB-C18 4.6×250 mm, 5 µm (990967-902)
- Mobile phase: methanol : sodium dihydrogen phosphate BS containing 0.1 % tetrabutylammonium hydroxide solution (dissolve 2.0 mL of 40 % tetrabutylammonium hydroxide solution and 2.2 g of disodium hydrogen phosphate in water to 780 mL, adjust pH to 7.8 with phosphoric acid) = 22:78
