Integrated Biology Solutions

GeneSpring + Resolver System: Double your analysis power

**A comprehensive gene expression analysis solution
with a choice of clients**

For dynamic research institutions that employ researchers with a wide range of analysis needs, the combination of GeneSpring GX and the Rosetta Resolver® System provides a statistically powerful solution that gives users the choice between two of the most widely used tools for biological exploration. Instead of deploying a slew of single-purpose tools that do not interoperate, the combination of GeneSpring GX and the Resolver System brings together researchers with distinct approaches to analysis and data exploration.

Why choose...?

Why choose when you can combine the strengths of the industry's most validated expression database with the most widely used desktop solution for expression data analysis?

Now you can transfer data between the Resolver system and GeneSpring GX to ensure a comprehensive analysis. This new interoperability is made possible by the Resolver system/GeneSpring Data Exchange Connector which uses each program's API to facilitate communication.

Gene expression measurements can be transferred from the Resolver system to GeneSpring software for downstream analysis. Transfer gene sequence sets (i.e. Biosets) from the Resolver system to GeneSpring, and gene lists from GeneSpring to the Resolver application.

Take advantage of this new interoperability to:

- o Empower the widest range of researchers with tools that match their needs and experience levels
- o Ensure that valuable intellectual property is managed in a secure scalable repository
- o Maximize the use and exchange of data and results throughout your organization

GeneSpring GX + Resolver System advantages

- o Familiar and trusted interfaces
- o Simple client installation
- o Robust, scalable database
- o Biologically relevant data exploration

For more information on combining the two most widely used expression analysis solutions, please contact Agilent Technologies at:

About Agilent's Integrated Biology Solutions

Agilent Technologies is a leading supplier of life science research systems that enable scientists to understand complex biological processes, determine disease mechanisms and speed drug discovery. Engineered for sensitivity, reproducibility and workflow productivity, Agilent's integrated biology solutions include instrumentation, microfluidics, software, microarrays, consumables and services for genomics, proteomics and metabolomics applications.
