

OpenLAB ECM - Workgroup through Enterprise

What is OpenLAB ECM?

OpenLAB Enterprise Content Manager (ECM) is a software platform that provides a secure, central repository and rich content services to create, capture, manage, collaborate, archive, and re-use all of your business critical information, including XML, spreadsheets, Word documents, PDF files, drawings, HTML files, email, images, analytical data, reports, and more. Because it was born in the life sciences laboratory environment, OpenLAB ECM has the unique ability to manage data generated from analytical instruments and measurement devices (e.g. chromatography systems, NMR, mass spectroscopy, medical imaging/DICOM devices) as well as any document type.

OpenLAB ECM is a proven solution that has helped organizations across a number of industries get control of their business critical information while improving regulatory compliance, reducing operational costs, boosting productivity levels, and increasing customer satisfaction.

What is OpenLAB ECM Workgroup?

The OpenLAB ECM Workgroup scales these powerful content management features to a size suitable for a relatively small laboratory environment. The smaller scales allows implementation and maintenance without the need for expert database administration or network administration skills, while providing many of the rich data management tools from the enterprise system. OpenLAB ECM Workgroup is easily upgraded to the Enterprise version, so as your data management needs grow so will your content management solution.
