

General Description

The AAT3560 Series of PowerManager™ products is a member of AATI's Total Power Management IC™ (TPMIC™) product family. These voltage detectors are ideal for monitoring voltage supplies in portable systems, where extended battery life is critical. They provide a low cost, reliable solution by eliminating several external components. The AAT3560 series operates by monitoring the system power supply voltage. When the input voltage drops below a fixed threshold, the device output changes state depending upon configuration. When the input voltage rises above the threshold, the device output reverts back to the previous state. The AAT3560 series are available with three different output stages: AAT3560 push-pull active high output, AAT3562 push-pull active low output and AAT3564 open drain active low output.

The quiescent supply current is extremely low, typically 1μA, making it ideal for portable battery operated equipment.

The AAT3560/2/4 are available in a 3 pin SOT-23 package and are specified over -40 to 85°C operating temperature range..

Features

- 1.2V to 5.5V Input voltage range
- Operates down to 1.2V
- Extremely low quiescent current: less than 2μA
- High accuracy detection threshold: ±1.5%
- Monitor Power Supply Voltages
 - Fixed thresholds from 2.2V to 4.6V
- Available output configurations:
 - Open-drain output
 - CMOS active high output
 - CMOS active low output
- Temp range -40 to 85°C
- 3 pin SOT-23 package

Applications

- Portable Electronics
- Battery Packs
- Battery Charger Circuits
- Data Acquisition Systems
- Power Supplies
- Notebook Computers
- Intelligent Instruments

Pin Descriptions

AAT3560, 3562, 3564 (SOT23-3)

Pin #	Symbol	Function
1	GND	Ground
2	RESET ($\overline{\text{RESET}}$)	Reset output. See table below for output configurations.
3	V _{CC}	Supply Voltage (+1.2V to +5.5V)

Part Number Descriptions

SOT23-3 Part Number	Part Description
AAT3560	RESET Push Pull Active High
AAT3562	$\overline{\text{RESET}}$ Push Pull Active Low
AAT3564	$\overline{\text{RESET}}$ Open Drain, Active Low

Pin Configuration

Absolute Maximum Ratings ($T_A=25^{\circ}\text{C}$ unless otherwise noted)

Symbol	Description	Value	Units
V_{CC}	V_{CC} to GND	-0.3 to 5.5	V
V_{RESET}	RESET to GND (Push-Pull Output)	-0.3 to $V_{CC}+0.3$	V
	RESET to GND (Open Drain Output)	-0.3 to 5.5	
I_{MAX}	Maximum Continuous Input Current	20	mA
I_{RESET}	RESET/RESET Current	20	mA
T_J	Operating Junction Temperature Range	-40 to 150	$^{\circ}\text{C}$
T_{LEAD}	Maximum Soldering Temperature (at Leads) for 10s	300	$^{\circ}\text{C}$

Note: Stresses above those listed in Absolute Maximum Ratings may cause permanent damage to the device. Functional operation at conditions other than the operating conditions specified is not implied. Only one Absolute Maximum rating should be applied at any one time.

Thermal Information

Symbol	Description	Value	Units
Θ_{JA}	Maximum Thermal Resistance ¹	200	$^{\circ}\text{C}/\text{W}$
P_D	Maximum Power Dissipation ¹	320	mW

Note 1: Mounted on FR4 board.

Electrical Characteristics ($V_{IN} = 5\text{V}$, $T_A = -40$ to 85°C unless otherwise noted. Typical values are at $T_A=25^{\circ}\text{C}$, $V_{CC} = 5\text{V}$ for 4.63/4.38V versions, $V_{CC} = 3.3\text{V}$ for 3.08/2.93V versions, $V_{CC} = 3.0\text{V}$ for 2.63V version and $V_{CC} = 2.5\text{V}$ for 2.32/2.2V versions)

Functional Description

General

The AAT3560 series of Nanopower voltage detectors, monitors a system power supply and asserts an output signal (Low for AAT3562, AAT3564 and High for AAT3560) when the supply voltage drops

below a factory programmed threshold voltage. The output signal will remain valid until the input voltage falls below the Minimum Operating Voltage of 1V. Below this value the output voltage is undefined. When the input voltage rises above the factory programmed threshold, the output signal will resume its inactive state.
