Getting Started

Your PowerBook has been designed so that you can set it up quickly and start using it right away. If you have never used a PowerBook or are new to Macintosh computers, read this section for instructions on getting started and where to get more information.

If you are an experienced user, you may already know enough to get started. Be sure to look over the information in Chapter 2, “Getting to Know Your Computer,” to find out about the new features of this PowerBook.

Important Read all the installation instructions and safety information (see page 99) carefully before you plug your computer into a wall socket.

Plugging In the Computer

Plugging in the power adapter provides AC power to the computer and recharges the computer's battery. You should plug in the power adapter in case the battery has been drained during shipping or storage.

- 1 Plug the AC plug on the power adapter into an outlet. You can also remove the AC plug and plug one end of the AC cord into the adapter and the other end into an outlet.

- 2 Plug the power adapter plug into the power adapter port (marked with the icon ) on the back of the computer. You can also remove the AC plug and plug one end of the AC cord into the adapter and the other end into an outlet.

A light appears on the power adapter plug. An amber light indicates that the battery is being charged. A green light indicates that the battery is fully charged. Make sure to push the power plug snugly into the power adapter port to ensure it is engaged and power is flowing to the computer. You can monitor the battery level using the battery icon in the menu bar.

You can wrap the extra adapter cable around the clips that open out from the power adapter.

When disconnecting the power adapter from an outlet, pull the plug, not the cord.

Connecting the Internal Modem

If you want to connect to the Internet right away, connect one end of the phone cord to the internal modem port (marked with the icon ) and the other end to an analog telephone line (the type of telephone line found in most residences).

Warning Do not connect a digital telephone line to the modem, because the wrong type of line could damage the modem. Contact your telephone service provider if you are unsure whether you have a digital telephone line.

Opening the Display

- 1 Push the display release button.

- 2 Open the display and position it at a comfortable viewing angle.

Turning the Computer On

To turn on the computer, press the Power button (⏻). You should hear a tone when you turn on the computer. It takes the computer a few moments to start up. This is normal. When you press the Power button, the PowerBook checks its memory before it starts up. The more memory installed, the longer the delay.

Problems Turning the Computer On?

Nothing happens when you press the Power button.

- Make sure the battery is properly installed. Push the silver button on the battery to check its charge. See “Battery” on page 57.
- The battery may be drained. Make sure that you plugged in the power adapter firmly into both the computer and a power source.
- If the computer still doesn't start up, see page 92 for more troubleshooting suggestions.

You see a picture of a disk or a folder with a blinking question mark.

- This icon usually means that the computer can't find system software on the hard disk or any disks attached to the computer. You may need to reinstall system software. See page 93.

Moving Items on the Screen

You use your PowerBook trackpad to move and select items on the screen, much as you use a mouse with a desktop computer. To move the arrow pointer on the screen, slide your finger across the trackpad. To select, click, or double-click an item on the screen, use the trackpad button.

Note: Instead of using the trackpad button, you can click and double-click directly on the trackpad. You turn on this and other trackpad options in the Mouse pane of System Preferences in Mac OS X or in the Trackpad control panel in Mac OS 9.

The trackpad is sensitive to how quickly you move your finger. To move the pointer a short distance across the screen, move your finger slowly across the trackpad. The faster you move your finger, the farther the pointer moves on the screen.

Tips for Using the Trackpad

For best results when using the trackpad, keep in mind these tips:

- Use only one finger. Using more than one finger may cause erratic pointer behavior.
- Do not use a pen or any other object.
- Keep your finger and the trackpad dry. If the trackpad becomes moist from humidity or condensation, gently wipe it with a clean cloth before you use it.
- Never use any kind of cleaning solution on the trackpad.

For more information on using the trackpad, see Mac Help, located in the Help menu.

Adjusting the Internal Display

Before you begin working with your new PowerBook, you may need to adjust your display so that items on the screen are easy to see.

Adjusting the Brightness

Use the keys labeled with the ☼ icon to adjust screen brightness.

Adjusting the Display Resolution

You can increase the size of images on your display by switching from the standard resolution to a scaled resolution. To adjust the resolutions on your display:

- *In Mac OS X*, open the Displays pane of System Preferences. To control your display settings using the Displays icon in the menu bar, click “Show displays in menu bar.”

- *In Mac OS 9*, click the Resolution icon in the Control Strip.

Resolutions Supported by the Built-In Display

Your PowerBook has a wide-screen display with a native resolution of 1280 x 854 that also supports standard resolutions such as 1024 x 768. When you use a standard resolution, a black band appears on each side of the display.

Most applications automatically switch to the best resolution for them.

You may want to use a standard resolution when mirroring your display on an external monitor or when using certain applications (such as games or presentation software) that are designed for a standard resolution.

If you use an application designed for a standard resolution and do not want to see the black bands, you can choose the “stretched” version of the resolution to stretch the image to cover the entire screen and eliminate the black bands. To access additional stretched resolutions in Mac OS 9, hold down the Control key when you click the Resolution icon in the Control Strip.

In Mac OS X, you can choose a resolution of 896 x 600 or smaller from the Displays status menu in the menu bar. These are known as “scaled resolutions.” When you switch to a scaled resolution, items on the screen appear larger, making them easier to see. However, scaled resolutions may not be as sharp as the display’s native resolution.

Where to Go From Here

You've done everything you need to get your PowerBook up and running. The first time you turn your computer on, the Macintosh Setup Assistant takes you through the process of configuring your computer and setting up for the Internet. Internet access usually requires an account with an Internet service provider (ISP). Fees may apply.

If you would like additional information, see the following:

To learn about...	See...

Calibrating Your Battery for Best Performance

To get the longest running time from your PowerBook battery, let the battery run down during the first week you have your PowerBook. Then fully charge it one time. Follow these steps:

- 1 Plug in the power adapter and fully charge your PowerBook battery until the battery indicator lights and the onscreen meter (see page 59) indicate that the battery is fully charged.
- 2 Disconnect the power adapter and use your PowerBook until you see the first low battery warning dialog box on the screen.
- 3 Connect the power adapter and leave it connected until the battery is fully charged again.

Important You only have to fully discharge and then charge your battery once to calibrate it. After that, you can connect and disconnect the power adapter when the battery is at any charge level.

What to Do When You Are Finished Working

When you have finished working with your PowerBook, you have two options.

Put Your PowerBook to Sleep

If you will only be away from your PowerBook for a short time, put the computer to sleep. When the computer is in sleep, you can quickly wake it and bypass the startup process. When the computer is in sleep, its screen is dark and a small white light below the display pulsates.

To put the computer to sleep quickly, do one of the following:

- Close the display.
- Choose Sleep from the Apple () menu in Mac OS X, or from the Special menu in Mac OS 9.

Warning Wait a few seconds until the sleep light starts pulsating (indicating that the computer is in sleep and the hard disk has stopped spinning) before you move your PowerBook. Moving your computer while the hard disk is spinning can damage the hard drive, causing loss of data or the inability to start up from the hard disk.

To wake the computer:

- *If the display is closed*, open it. Your PowerBook wakes from sleep when you open the display. (You can turn off this option in the Energy Saver Control Panel in Mac OS 9.)
- *If the display is already open*, press the Power button (⏻) or any key on the keyboard.

Shut Down Your PowerBook

If you will not use your PowerBook for a day or two, shut it down. Do one of the following:

- Choose Shut Down from the Apple () menu in Mac OS X, or from the Special menu in Mac OS 9.
- Press the Power button and click Shut Down in the dialog box that appears on the screen.

- If you plan to store your PowerBook for an extended period of time, see “Storing Your PowerBook” on page 99 for additional steps to prevent your battery from draining completely.

Getting to Know Your Computer

If you're eager to get started and want to try out a few things on your PowerBook, this chapter is for you. It provides an overview of your computer's hardware and software features along with the unique Internet services available to Mac owners.

Your PowerBook is a full-featured notebook computer. It includes the latest in computer technology such as a PowerPC™ G4 processor, DVI-I, FireWire, USB, and AirPort wireless Internet and networking. On top of this hardware runs the Mac OS operating system. Included with the Mac OS are powerful features that allow you to use the Internet to watch video, research information, shop, and even update your software automatically.

With your PowerBook you also get iMovie 2, an easy-to-use digital video editing application that lets you use your PowerBook to create desktop movies. Simply connect a digital video camera to the FireWire port on your PowerBook, open iMovie 2, and you're ready to create your own movies.

Your PowerBook also comes with iTunes 2, the digital audio program that lets you import songs from your music CDs, create your own iTunes library, listen to hundreds of Internet radio stations, burn your own CDs, and share your music with iPod.

Apple also provides you with free Internet services that give you storage space on the Internet, a personal Mac.com email address, tools to easily create your own Web site or iMovie theater, and more.

If You Are New to the Mac

If this is your first Macintosh computer, start with the Mac Tutorials to learn how to use the trackpad to move items on the screen, go to a site on the World Wide Web, and more. To access the tutorials in Mac OS 9, choose Mac Tutorials from the Help menu.

Note: Because Apple frequently releases new versions and updates to its system software, applications, and Internet site, images shown in this manual may be slightly different from what you see on your screen.

Basic Features of Your PowerBook

**Brightness controls**

Increase or decrease the brightness of your PowerBook display.

**Volume controls**

Increase or decrease the volume of the sound coming from the built-in speakers and sound output port.

Keyboard lock

Protect the internal components of your PowerBook by preventing the keyboard from being easily opened.

Num Lock key

Activate the numeric keypad embedded in the PowerBook keyboard. When the numeric keypad is locked, the keyboard lock glows green.

**Video Mode Toggle key**

Use this key to toggle between dual display mode and video mirroring mode.

**Media Eject key**

Press and hold this key to eject a CD or DVD disc. You can also eject a disc by dragging its desktop icon to the Trash.

**Power button**

Turn your PowerBook on and off or put it to sleep.

Slot-loading optical DVD-ROM/CD-RW Combo drive

Your optical DVD-ROM/CD-RW Combo drive can read CD-ROM discs, Photo CDs, standard audio discs, DVD discs, DVD movies, and other kinds of media. It can also write music, documents, and other digital files on CD-R and CD-RW discs.

Function (Fn) key

Press and hold this key to activate the function keys (F1–F12).

Keyboard release tabs

When you need to access the internal memory slots, pull these tabs down to release the PowerBook keyboard.

Microphone

Record sounds directly on your PowerBook hard disk with this built-in microphone (located under the speaker cover).

**Security slot**

Protect your PowerBook by connecting a security cable.

Sleep light indicator

A white light pulsates when the PowerBook is in sleep.

Trackpad

Move the pointer on the PowerBook display.

Additional Features of Your PowerBook

**FireWire port**

Connect high-speed external devices, such as digital video cameras, printers, and external storage devices.

**Ethernet port (10/100/1000 Base-T)**

Connect to a high-speed 10/100/1000Base-T Ethernet network or connect to another computer and transfer files. The Ethernet port auto-sensing feature detects other Ethernet devices. You don't need an Ethernet crossover cable to connect to other Ethernet devices.

**Two USB (Universal Serial Bus) ports**

Connect additional equipment to your PowerBook, such as printers, external storage devices, digital cameras, modems, keyboards, and joysticks.

**External monitor (DVI-I) port**

Connect to an external monitor or projection device that uses a DVI-I connector; or use the DVI-to-VGA adapter to connect a VGA monitor.

**TV out (S-video out) port**

Connect your PowerBook to a television, VCR, or other video device. You can use TV out for presentations or to play a DVD-Video on your television.

**Stereo sound input port**

Connect your PowerBook to a line-level microphone or other audio equipment.

**Internal modem port**

Connect a standard phone line directly to the internal modem.

**Headphone port**

Connect external speakers, headphones, or other sound output devices.

PC Card slot

Expand the capabilities of your PowerBook using the Type II slot that supports both PC Card and CardBus formats.

PowerBook with the keyboard flipped over and internal RAM slot visible

PowerBook turned over

Memory slots

Your PowerBook comes with two memory slots, one above the other. The lower slot contains the memory module that came with your PowerBook. You can install an additional memory module in the upper slot. (If you ordered your PowerBook with additional memory, the upper slot may already be filled.) The maximum amount of RAM you can install in your PowerBook is 1 gigabyte (GB), using a 512 megabyte (MB) memory module in each slot. For instructions, see “Installing Additional Memory” on page 71.

Removable hard disk

You can remove the internal hard disk for service or security. For instructions, see “Removing the Internal Hard Disk” on page 80.

AirPort Card

The AirPort Card in your computer allows access to a wireless network. Your PowerBook may have come with an AirPort Card already installed. If not, you can purchase and AirPort Card and install it yourself. See “Installing an AirPort Card” on page 88.

About Mac OS X

Apple menu

Use this to change settings, open recently used items, and shut down your computer.

Sheet

Sheets for saving and printing are attached to document windows.

Button

If a button pulses, you can press the Enter or Return key instead of clicking it.

- **Status icons**

Check the status of System Preferences from the menu bar.

- **Finder toolbar**

Click to open folders, files, and shortcuts to places on your computer.

- **Window with buttons**

Click a button to close the window, minimize it in the Dock, or enlarge it.

Dock

Click an icon in the Dock to open that item or make it active. Some icons in the Dock indicate the status of an application.

What You Can Do

Mac OS X provides a powerful and elegant new user interface for your computer. With Mac OS X, you don't need to worry about the amount of memory to allot for an application to run efficiently, or restarting your computer if something goes wrong with an application. In addition to using Mac OS X software, you can still run Mac OS 9 versions of software in Mac OS X using the Classic environment. Chapter 4, "Working With Your Operating System," on page 67 explains Classic in more detail. Mac OS X also supports Java™ and UNIX-based software.

To Get Started

System Preferences is your command center for all of your computer settings, from changing the appearance of your desktop to setting up network access information. The Finder and Dock provide easy access to folders, applications, documents, and other items on your computer and network.

For details on the features of Mac OS X, see the *Welcome to Mac OS X* book that came with your computer or choose Mac Help from the Help menu in Mac OS X.

Tips and Tricks

Personalize the Finder

You can select a picture or color for your desktop by choosing the Desktop pane of System Preferences. You can also select and rearrange the items that appear in the Finder toolbar. Choose Customize Toolbar from the View menu and drag items to the toolbar.

Personalize the Dock

You can change the size of the Dock icons, turn on magnification so that the icons under your pointer become larger than the rest of the Dock, and position the Dock on the bottom, left, or right of your screen. Choose Dock from the Apple () menu, then choose Dock Preferences. You can also open your computer's System Preferences and click Dock.

Keep your desktop organized

Reduce the clutter on your desktop by minimizing open windows, which puts them in the Dock. Double-click a window's title bar or click the middle button in the top-left corner of the window to put it in the Dock. Click the window's icon in the Dock to open it again. You can also control some system settings using the status icons in the menu bar.

To Learn More

For instructions on how to customize your Mac OS X environment and for more information about using Mac OS X, see the *Welcome to Mac OS X* book that came with your computer.

iTools—Free Internet Services for Mac Users

Email

Get your own Mac.com email address. It's easy, and it works with your favorite email programs.

iCards

Send an elegant iCard, just right for any occasion. Choose a ready-made photo, or create a personalized iCard using photos on your iDisk.

iDisk

Your own 20 MB of free storage on Apple's Internet server. Share photos, movies, and other files over the Internet. Purchase additional storage space.

HomePage

Build a personal Web site in three easy steps. Create a photo album, publish an iMovie, post your résumé, and more. Now anyone can view your page on the Internet.

What You Can Do

iTools is a new class of Internet services from Apple created exclusively for Mac users. With iTools, you can send email or greeting cards to your friends and share photos and movies. You can even create your own Web site.

To Get Started

- 1 Connect to the Internet.
- 2 Go to www.apple.com
- 3 Click the iTools tab and then click the Free Sign Up button.

Tips and Tricks

Upload pictures to your iDisk to create custom iCards

You can send iCards with your own custom pictures. Save your images as GIF or JPEG files and then copy them to the Pictures folder on your iDisk. Your images will appear as picture choices when you create an iCard in the Create Your Own section.

Start with a HomePage template to create your own Web page in minutes

HomePage has Web page templates that you can modify with your own text and images. For example, teachers can use the HomePage education templates to post recent class news, homework assignments, and other information for parents. You can also use the HomePage photo album and iMovie templates to share your pictures and movies easily with your friends and family.

Instead of using a Web browser to open your iDisk, you can open it directly:

- *In Mac OS X*, click the iDisk icon in the Finder toolbar, or choose iDisk from the Go menu.
- *In Mac OS 9*, select the icon of your iDisk and choose Make Alias from the File menu.
Whenever you want to access your iDisk, double-click the alias and enter your password.

Sherlock 2—Your Internet Search Detective

Sherlock channels

Search the Internet for people, shopping, news, Apple info, and more.

Search button

After you type what you are looking for, click this button to start the search.

Search sites

Sherlock searches the Internet using several search engines.

Sherlock icon

Click the Sherlock icon in the Dock.

What You Can Do

Sherlock 2 is your search detective and personal shopper on the Internet. It provides an easy way to find people, news, and just about anything. Shop for books and music and search auction sites, find the best prices—even check product availability.

To Get Started

- 1 Connect to the Internet.
- 2 Open Sherlock:
 - *In Mac OS X*, click the Sherlock icon in the Dock. You can also choose Find from the File menu to find files on your computer.
 - *In Mac OS 9*, double-click the Sherlock icon on the desktop. You can also choose Search Internet from the File menu or choose Sherlock from the Apple () menu.
- 3 Select a Sherlock channel.
- 4 Type what you are looking for and click the Search button.

Tips and Tricks

Create your own customized Sherlock search channel

- 1 Choose New Channel from the Channels menu.
- 2 Select a name, channel type, and icon.
- 3 Download Sherlock plug-ins and drag them into the Search Sites list. Or hold down the Option key and drag plug-ins from other search lists to the icon of your new channel.

To Learn More

To learn more about what you can do with Sherlock, open Mac Help and search for “Sherlock.” To download additional search plug-ins and find out how you can create your own Sherlock plug-in, go to the Sherlock Web site at www.apple.com/sherlock

QuickTime—Audio and Video on the Internet

What You Can Do

In addition to playing video and music files on your Mac, with QuickTime you can watch live and recorded Internet broadcasts. Store channels that you frequently view by dragging them to your personal list of QuickTime Favorites (♥).

To Get Started

- 1 Connect to the Internet.
- 2 Open QuickTime Player:
 - *In Mac OS X*, click the QuickTime Player icon in the Dock. You can also double-click QuickTime Player in the Applications folder.
 - *In Mac OS 9*, double-click the QuickTime Player icon on the desktop. You can also open the Applications folder, then open the QuickTime folder and double-click QuickTime Player.
- 3 Select a channel or choose an option from the QuickTime Player menu. QuickTime TV uses Internet streaming, so you get the latest video, music, and information over the Internet without having to store files on your hard disk.

You can view your QuickTime Favorites (♥) by choosing Favorites from the QTV menu, then choosing Show Favorites from the submenu.

Tips and Tricks

Add additional QuickTime TV channels

Go to www.apple.com/quicktime and click the QuickTime TV link. There you will find all of the available QuickTime channels. You can watch a QuickTime TV (QTV) channel and with one click add it to your QuickTime Favorites list.

Upgrade to QuickTime Pro to do the following:

- Play back full-screen video and resize movies.
- Create streaming movies.
- Work with more than 30 audio, video, and image formats, including Flash.
- Create, open, edit, and save movies and audio as easily as copying and pasting.

To Learn More

Internet video is just one of the things you can do with QuickTime. To learn more, start with QuickTime Help. To download additional channels or find information on setting up your own Internet streaming server, go to the QuickTime Web site at www.apple.com/quicktime

iMovie 2—Create and Edit Your Own Digital Movies

iMovie monitor

Preview your movie or view video directly from a connected DV camcorder.

Mode switch

Use this to switch between importing from a camcorder and editing.

Clip viewer

Timeline viewer

The clip viewer and the timeline viewer are visual aids for assembling and editing your movie.

Playback controls

Use these to play the movie in the iMovie monitor.

Scrubber bar

Use this to select sections of video.

Shelf

To make clips part of your movie after you import them, drag them from the shelf to the clip viewer.

Editing buttons

Click these to open panels for adjusting and selecting sounds, video effects, titles (text), and transitions. Click the Clips button to see the shelf.

Video track

Lets you work with audio contained in video clips.

Audio tracks

Lets you work with recordings, music, and sound effects.

Playhead

Represents the location of the frame showing in the iMovie monitor. Move the playhead to see where things appear in a movie.

What You Can Do

iMovie is an easy-to-use digital video editing software application. With iMovie and a digital video camcorder, you can create and edit your own movies. Import video from the camera; edit clips; and add transitions, titles, sound effects, and music. Then copy the movie to a camcorder tape or create a QuickTime movie. You can even share your QuickTime movies by placing them on the Web on your Apple iDisk or HomePage.

Your computer comes with iMovie optimized for Mac OS X and Mac OS 9 already installed. If you delete iMovie, you can recover it using the Apple Software Restore CDs that came with your computer. For more information on restoring your computer's software, see "Restoring Your Computer's Software" on page 93.

To Get Started

- 1 Shoot your video, then connect the camera to your computer's FireWire port.
- 2 Open iMovie in the iMovie folder (located in the Applications folder).
- 3 Click the Import button to import movie clips to the shelf, then add them to your movie by dragging them to the clip viewer.
- 4 Assemble and edit your movie in the clip viewer and timeline viewer.
- 5 Add transitions, titles, sound, and music.
- 6 When you are finished, choose Export from the File menu.

Tips and Tricks

Share your desktop iMovie with your friends and family

Export your movie as a QuickTime Web movie and copy the movie to your iDisk. Then use HomePage to create your own iMovie theater so that others can view your movie on the Internet.

To Learn More

For more information on using iMovie, see the iMovie Tutorial or iMovie Help. For the latest on iMovie, including iMovie updates, additional plug-ins, and a list of compatible DV camcorders, go to the iMovie Web site at www.apple.com/imovie

iPhoto—Organize and Share Your Digital Photographs

What You Can Do

iPhoto lets you import pictures from your digital camera, organize them into albums, edit and enhance them, and share them in a number of different ways. Once you see what iPhoto can do with digital pictures, you may never go back to using a film camera again.

To Get Started

Plug your camera into the USB port on your Macintosh. iPhoto opens, imports your photos, and displays them on your screen.

Tips and Tricks

Resize thumbnails

Drag the size control in the iPhoto window, and your photo thumbnails grow or shrink for easier viewing. You can view individual shots in greater detail, see hundreds of thumbnails on the screen at once, or quickly scroll through your photos to find the one you're looking for.

Create albums for your favorite photos

iPhoto lets you easily organize your photographs into digital albums—birthday, vacation, wedding, whatever—for easy retrieval. (If you're familiar with iTunes, think playlists for pictures.) Sharing and enjoying them is easy, too: click a button to see them in a full-screen slide show, accompanied by your favorite music. Email them to friends. Print them on your ink jet printer. Or order prints over the Internet.

Create your own books

Create custom books with your own pictures and words. It's easy to create an album and select a book theme and a layout you like. Add titles and text to tell your story or describe your pictures, then print your book pages on your printer. iPhoto makes it simple to turn your book into a beautiful keepsake.

Built exclusively for Mac OS X

Harnessing the power of the world's most advanced operating system, Mac OS X, iPhoto lets you manipulate high-resolution images quickly. Built-in color management ensures consistent color from photo to Web to print. And convenient Internet tools and services make it easy to share your photos with others.

iTunes 2—Digital Music for Your Mac and iPod

Library

Your collection of songs, imported from your own audio CDs or downloaded from the Internet. Easily browse or search for music.

iPod

Sync with your iPod and automatically update songs and playlists.

Radio Tuner

Choose from hundreds of Internet radio stations—jazz, rock, talk, and more.

Audio CDs

Play an audio CD on your computer. Import songs to your library to play them without the CD.

Equalizer

Adjust the sound to your tastes using the 10-band EQ.

Visuals button

Have iTunes display a stunning light show that changes, throbs, and pulses to the beat of your music. Enjoy different colors and patterns every time you listen to a song.

Search

Type some text and iTunes lists song titles that match.

Playlists

Make personalized playlists using songs from your Library. Arrange your music by mood, artist, genre, or however you like.

Eject CD button

What You Can Do

iTunes lets you import songs from music CDs as MP3 files, create playlists, move music to your iPod or other portable MP3 player, listen to hundreds of radio stations on the Internet, and more.

To Get Started

- 1 Open iTunes (located inside the Applications folder on your hard disk).
- 2 Insert an audio CD into your PowerBook's optical drive.
- 3 Click the checkbox next to the songs you want to import.
- 4 Click the Import button. Your songs are converted into MP3 files and stored in your iTunes library.

Tips and Tricks

Create playlists for your favorite sets of songs

iTunes lets you create playlists from songs in your library. A playlist is a list of songs in a specific order. Use your playlists to program your music for specific moods, artists, or themes. Click the New Playlist button and drag songs from your library to the playlist.

Resize the iTunes window or access iTunes from the Control Strip

You can collapse the iTunes window to show just the playback controls and status. Click the zoom button (the rightmost button in the upper-left corner) in Mac OS X, or click the zoom box in the upper-right corner in Mac OS 9. You can also access iTunes controls from the Dock in Mac OS X or the iTunes Control Strip module in Mac OS 9.

Look up CD information from CDDB

iTunes automatically connects to the CD database (CDDB) on the Internet to look up the name of the album, song titles, and other information about your music CD. If you are not connected to the Internet, you can look up information on songs you imported the next time you connect. Select the song and choose Get CD Track Names from the Advanced menu.

Connect your PowerBook to your stereo system

You can easily connect your PowerBook to your stereo system. Use a miniplug-to-RCA cable (not included) to connect the headphone port () on your PowerBook to the audio input ports on your stereo.

Auto Updating—Automatically Keep Your Mac on the Cutting Edge

Update software

Set how often your computer checks for software updates from Apple.

Update Now

Click to check instantly for updates available for your Apple software. Select the Apple software you want to update from the list that appears.

What You Can Do

Software Update uses the Internet to download and install the latest software versions, drivers, and other enhancements from Apple automatically. Use Software Update to instantly check Apple's Internet servers to see if any updates are available for your Apple software. You can even set your Mac to check the Apple server periodically and download and install updated software for you.

To Get Started

- 1 Connect to the Internet.
- 2 Open Software Update:
 - *In Mac OS X*, open System Preferences and click Software Update.
 - *In Mac OS 9*, choose Control Panels from the Apple () menu, then choose Software Update from the submenu.
- 3 Click Update Now, then select the software updates you want and click Install.

Tips and Tricks

Adjust your Software Update schedule

If you have an Internet connection that is always on, you can set a schedule for your computer so that it checks for software updates at a certain time on specific days of the week. If you have a dialup connection and you are not connected, Software Update will check the next time you connect.

Install new software automatically

You can set up your Mac so that every week it checks for and installs the latest software. Set a schedule for your computer to check for software updates and deselect the "Ask me before downloading new software" checkbox.

To Learn More

For more information on using Software Update, search for "Software Update" in Mac Help. For the latest information on the Mac OS, go to the Mac OS Web site at www.apple.com/macos

Multiple Users—Turn One Mac Into Many

Users

Use the Users pane in System Preferences to add user accounts.

Home

Each user has a home. Finder, Dock, iTools, Mail, and other preferences are kept for each user in the user's home, so users can customize Mac OS X the way they want.

Shared folder

To give access to the Shared folder, a user can turn on file sharing in Sharing preferences.

What You Can Do

Several people can share a single computer by logging in to their individual user accounts. Users can select their own customized settings, such as bookmark and desktop views, and access their own private storage space, called a Home folder. Users sharing the computer also have access to a common Shared folder.

The first user account created on your computer is designated an administrator. Administrators are users with special privileges: they can give new users access to the computer, install software, and change general computer settings.

Note: If you forget the administrator password, you can reset it using the Mac OS X CD. Start up from the Mac OS X CD and choose Reset Password from the Installer menu. Because a user with the Mac OS X CD can gain unrestricted access to the computer, you should keep the CD in a safe place.

To Get Started

- 1 Create a new user:
 - *In Mac OS X*, choose System Preferences from the Apple () menu, click Users, then click New User.
 - *In Mac OS 9*, choose Control Panels from the Apple () menu, then choose Multiple Users from the submenu. Click On next to Multiple User Accounts, then click New User.
- 2 Edit the user's information. You can give a user administrative privileges.
- 3 Close the window.

Tips and Tricks

Keeping your computer secure

You can require a password to access the computer after the screen saver appears in case users log in and leave the computer unattended. Open System Preferences, click Screen Saver, and click Activation to select the period of inactivity before the screen saver starts. Then select "Use my user account password."

Set up user privileges

In Mac OS 9, administrators can specify the documents and applications that users can access and configure overall settings such as a Welcome message and the default desktop environment. For details, search for "Multiple Users" in Mac Help in Mac OS 9.

To Learn More

For more information on setting up user accounts in Mac OS X, search for "users" in Mac Help.

Mac Help—Answers to All Your Macintosh Questions

Using Your Computer

Your PowerBook has many built-in features and expansion capabilities you can use to customize and expand your computer to fit your needs. These include the following:

- Universal Serial Bus (USB) for connecting additional equipment to your PowerBook, such as printers, scanners, joysticks, keyboards, digital cameras, and floppy disk drives.
- FireWire for connecting high-speed equipment, such as digital video cameras and external hard drives.
- The latest in communications technologies, such as a 56K modem, 10/100/1000Base-T Ethernet, and AirPort wireless Internet and networking.
- DVI-I video output with included DVI-to-VGA adapter gives you the ability to use your PowerBook with an external monitor, video projector, or digital flat panel display, including support for video mirroring and extended desktop (dual display) modes. Use your PowerBook's built-in S-video support to play DVD Video discs on your television.
- A long-lasting battery, one Type II PC Card/CardBus slot, audio line in and out ports, and more.

To learn about what you can do with your PowerBook, start with the information in this chapter. Additional information can be found in Mac Help (see page 44) and on the many Apple Internet Web sites.

Universal Serial Bus (USB)

Your PowerBook comes with two USB ports, which you can use to connect many types of external devices, including printers, scanners, digital cameras, game pads, joysticks, keyboards, and floppy disk drives. USB makes it easy to connect external equipment. In most cases you can connect and disconnect a USB device while the computer is running. Once you connect the device, it is ready to use. You don't need to restart or reconfigure your computer.

Using USB Devices

To use a USB device with your computer, simply connect the device to the computer. Your computer automatically loads the correct software whenever you attach a new device.

Note: Apple has already included software to work with many USB devices. When you connect a USB device, if your PowerBook cannot find the correct software, you can either install the software that came with the device or follow the onscreen prompts to use the Internet to locate, download, and install the correct software.

USB Devices and Battery Power

USB devices, such as joysticks and keyboards, that get power from the USB connection instead of a separate power adapter can be used with your PowerBook. However, these types of USB devices can cause your PowerBook battery to become depleted faster. If you are going to have a device connected for an extended period, it is a good idea to plug the PowerBook into its power adapter.

Using Multiple USB Devices at the Same Time

Your PowerBook has two USB ports. If you want to use more than one device on the same USB port, purchase a USB hub. The USB hub connects to an open USB port on your computer and provides additional USB ports (usually four or seven). Most USB hubs also have a power adapter and should be plugged into an outlet.

For More Information on USB

Additional information on USB is available in Mac Help (see page 44). Choose Mac Help from the Help menu and search for “USB.” You can also find information on the Apple USB Web site at www.apple.com/usb

For information on USB devices available for your computer, check the Macintosh Products Guide at www.apple.com/guide

FireWire

Your computer has one FireWire port. FireWire lets you easily connect and disconnect external high-speed devices—such as digital video (DV) cameras, printers, scanners, and hard disks. You can connect and disconnect FireWire devices without restarting your computer.

These are some of the things you can do with FireWire:

- Connect a digital video camera and capture, transfer, and edit high-quality video directly on your computer using video editing software such as iMovie or Final Cut Pro.
- Connect an external FireWire hard disk drive and use it to back up data or transfer files. A FireWire hard disk icon appears on your desktop after you connect the drive to your PowerBook.
- Start up from an external FireWire hard disk. Connect an external FireWire disk (with a valid System Folder installed on it) and then do the following:
 - *In Mac OS X*, open the Startup Disk pane of System Preferences and click the FireWire disk.
 - *In Mac OS 9*, open the Startup Disk control panel and click the FireWire disk.
- Restart your computer.

Using FireWire Devices

To use a FireWire device with your computer, connect the device to the computer and install any software that came with the device. Your computer automatically senses when you attach a new device.

FireWire Devices and Battery Power

FireWire devices, such as certain external hard drives that get power from the FireWire connection instead of a separate power adapter, can be used with your PowerBook. However, these types of FireWire devices can cause your PowerBook battery to become depleted faster. If a device will be connected for an extended period, it is a good idea to plug the PowerBook into its power adapter.

Note: The FireWire port is designed to support power for FireWire devices (up to 7 watts maximum). You can connect multiple devices to each other and connect the “daisy-chain” of devices to the FireWire port on your computer, but only one device should get power from the computer. The rest of the devices in the daisy-chain should be powered by separate power adapters. Connecting more than one FireWire device that gets power from the computer may cause problems. If a problem occurs, shut down the computer, remove the FireWire devices, and restart your computer.

FireWire Target Disk Mode

If you want to transfer files between your PowerBook and another FireWire-equipped computer, or you have a problem that prevents your computer from starting up, you can use FireWire Target Disk Mode to connect to another computer.

Important If you are using Mac OS 9, the computer you connect your PowerBook to must have FireWire version 2.3.3 or later installed. Use the Extensions tab of Apple System Profiler, available in the Apple menu in Mac OS 9, to check the version of FireWire.

To connect your PowerBook in FireWire Target Disk Mode, follow these steps:

- 1 Make sure that your PowerBook is shut down.
- 2 Use a FireWire cable with a standard 6-pin connector on each end to connect your PowerBook to another FireWire-equipped computer.
- 3 Start up your PowerBook and immediately hold down the T key. Your PowerBook display shows the FireWire logo, and the PowerBook internal hard disk icon, and the icon of a CD or DVD disc the PowerBook’s optical drive appears on the desktop of the other computer.
- 4 When you are finished transferring files, drag the PowerBook hard disk icon and the CD or DVD disc icon to the Trash.
- 5 Press the Power button on the PowerBook to shut it down and then disconnect the FireWire cable.

For More Information on FireWire

Additional information on FireWire is available in Mac Help (see page 44). Choose Mac Help from the Help menu and search for “FireWire.” You can also find information on the Apple FireWire Web site at www.apple.com/firewire

PC Cards

You can expand your computer's capabilities using the PC Card slot. Your PowerBook has one PC Card slot that accepts Type I and Type II PCMCIA cards, including CardBus-format cards. You can insert a PC Card when your computer is on, off, or in sleep.

Important The Apple AirPort Card is installed in a slot inside your computer. It does not go in the PC Card slot the way many third-party wireless cards do. The AirPort Card will not work if it is installed in the PC Card slot and will cause your computer to function improperly.

Inserting and Ejecting a PC Card

When inserting a PC Card, make sure the label is facing up and the card is level. You'll feel some resistance as you slide the card in. When the card is firmly seated in the slot, it clicks into place and an icon appears on the desktop. You can eject a PC Card when your computer is on or off, but not when it is in sleep.

To eject a PC Card:

- 1 If the computer is turned on, drag the card's icon to the Trash.
- 2 Push the PC Card eject button once to release the button.
- 3 Push the button again to eject the card.
- 4 Pull the card out of the slot and then push the eject button again to set it flush against the computer.

For More Information on PC Cards

For information on the PC Cards available for your PowerBook, check out the Macintosh Products Guide at www.apple.com/guide

AirPort Wireless Internet and Networking

Your PowerBook is AirPort-ready. It has a built-in antenna, and an AirPort Card may already be installed in it depending on the configuration. AirPort offers an easy and affordable way to provide wireless Internet access anywhere in the home, at work, or in the classroom. Instead of using traditional cables, AirPort uses wireless local area network (LAN) technology to provide wireless communication between multiple computers. Through a wireless network you can set up access to the Internet, transfer files, play multiplayer games, and more.

Note: Wireless Internet access requires an AirPort Card, AirPort Base Station, and Internet access (fees may apply). Some Internet service providers are not currently compatible with AirPort. Range may vary with site conditions.

How AirPort Provides Wireless Internet Access

With AirPort, you set up a wireless connection to a device known as a *base station*, which has a physical connection to the Internet. AirPort technology works like a cordless telephone. The AirPort Card in the computer makes a wireless connection to the base, which is connected to the telephone line or a DSL or cable modem.

For More Information on AirPort

To purchase an AirPort Base Station, contact your Apple-authorized dealer or go to the Apple Store at www.apple.com/store

Additional information on AirPort is available in AirPort Help. Choose Help Center from the Help menu and click the AirPort Help link. You can also find information on the Apple AirPort Web site at www.apple.com/airport or the Apple Knowledge Base at kbase.info.apple.com

Ethernet (10/100/1000Base-T)

Your computer comes with built-in 10/100/1000 megabit per second (Mbps) twisted-pair Ethernet networking capability, which you can use to connect to a network, including a Gigabit Ethernet network, or to a cable or DSL modem.

Connecting to a network gives you access to other computers. You may be able to store and retrieve information; use network printers, modems, and electronic mail; or connect to the Internet. You can also use Ethernet to share files between two computers or set up a small network. The Ethernet port on your PowerBook auto-detects other Ethernet devices. You don't need an Ethernet crossover cable when connecting to other Ethernet devices.

- Use 2-pair category 3 Ethernet cables to connect to a 10Base-T Ethernet network.
- Use 2-pair category 5 Ethernet cables to connect to a 100Base-T Ethernet network.
- Use 4-pair category 5 Ethernet cables to connect to a 1000Base-T Ethernet network.

For More Information on Using Ethernet

Additional information, including setting up an Ethernet network and transferring files using Ethernet, is available in Mac Help (see page 44). Choose Mac Help from the Help menu and search for “Ethernet” or “network.”

For information on networking products you can use with your PowerBook, check the Macintosh Products Guide at www.apple.com/guide

External Video Support (DVI/VGA and S-Video)

Your computer has a video output port that allows you to directly connect a display or projector with a DVI-I port. Use the included DVI-to-VGA adapter to connect your PowerBook to monitors and projectors that have VGA output.

The TV out port (also known as an *S-video out port*) on your computer lets you connect to a television, videocassette recorder (VCR), or video projection system using either an S-video or composite video cable (available at your local electronics store). You can use TV out to display images on a television, record computer images on a VCR, or play DVD-Video discs on your television.

If the device you want to connect does not have S-video, you can use the S-video-to-composite adapter that came with your PowerBook.

When an external monitor or television is connected, you can either have the same image appear on both the internal display and the external monitor (known as *video mirroring*) or use the external monitor to extend the size of the Mac OS desktop (known as *dual display mode*). By default, your PowerBook starts up in mirroring mode. To work in dual display mode, press the F7 (⌘) key to switch between video mirroring and dual display modes.

Note: Because of the display limitations of most televisions, images displayed on the television screen will be of lower quality than those on the built-in display or an external monitor.

Connecting an External Display or Projector

To connect an external display or projector to your computer with a DVI connection:

- 1 Turn on the external display or projector.
- 2 Connect the monitor cable to your PowerBook. Your PowerBook automatically detects the external display.
- 3 Adjust the resolution on the external display as needed.

In Mac OS X, click the Display tab in the Displays pane of System Preferences or use the Displays icon in the menu bar.

- *In Mac OS 9*, click the Resolution portion of the Control Strip. To see a list of all possible resolutions, press the Control key when you click Resolution.

To connect an external monitor or projector to your computer with a VGA connection:

- 1 Turn on the external monitor or projector.
- 2 Connect the DVI-to-VGA adapter that came with your PowerBook to the external monitor or projector's VGA port.

- 3 Connect the DVI-to-VGA adapter to your PowerBook. Your PowerBook automatically detects the external monitor.

Important To ensure that your PowerBook automatically detects the external monitor or projector, be sure the DVI-to-VGA adapter is plugged into the external monitor or projector first.

- 4 Adjust the resolution on the external monitor or projector.

For information on the supported external monitor resolutions, see “External Monitor in Dual Display or Video Mirroring Mode” on page 96.

Using Your PowerBook With the Display Closed

You can use your PowerBook with the display closed if the computer is connected to an external monitor, keyboard, and mouse, and the power adapter is plugged into the PowerBook and an outlet.

To operate your computer with an external monitor attached and the display closed, do the following:

- 1 Connect a USB keyboard and mouse to your PowerBook.
- 2 Close the PowerBook display to put the computer to sleep.
- 3 Follow the steps in the previous section to connect your PowerBook to an external monitor.
- 4 Wait a few seconds and then press any key on the external keyboard to wake the PowerBook.

Important Keep the PowerBook’s internal display open at a 90 degree or greater angle when your PowerBook is attached to an external display and running in dual display or video mirroring mode. This allows for proper air circulation over the keyboard and assists with heat dissipation.

Connecting a Television, VCR, or Other Video Device

To connect a device to the TV out port:

- 1 Connect an S-video cable to the TV out port () on your PowerBook (or use the S-video-to-composite adapter to connect a composite video cable) and connect the other end to your device.
- 2 If you want to send the sound from your PowerBook to the device, connect a miniplug-to-RCA cable (not included) from the headphone port () on your PowerBook to the audio input ports on your device.
- 3 Turn on the external device.
- 4 Hold down the Command () key and press the F2 key to detect the TV monitor.
- 5 Adjust how the images are displayed on the device:
 - In *Mac OS X*, use the Displays pane of System Preferences.
 - In *Mac OS 9*, use the TV Mirroring portion of the Control Strip.

Connecting an Apple Flat Panel Display

You can connect your PowerBook to an Apple Flat Panel display using a DVI-to-ADC adapter, available from your Apple-authorized dealer, an Apple Retail Store, or from the Apple Store at www.apple.com/store

For More Information on Using an External Monitor or TV

Additional information on using and configuring an external monitor is available in Mac Help (see page 44). Choose Mac Help from the Help menu and search for “monitor.”

Battery

When the external power adapter is not connected, your computer draws power from its battery. You can determine the charge left in your battery by looking at the battery level indicator lights on the battery itself. Press the button next to the lights and the lights glow to show how much charge is left in the battery. The indicator lights remain lit for a few seconds after you press the button. You can check the charge with the battery in or out of your PowerBook.

Important If only one flashing light is on, very little charge is left. If no lights are visible, the battery is completely drained and the computer will not start up unless the power adapter is connected. Plug in the power adapter for several hours to let the battery recharge.

Removing and Replacing the Battery

To remove the battery:

- Shut down or put your PowerBook to sleep. Turn it over, and locate the battery release latch. Slide the latch to the side and gently remove the battery.

Swapping Batteries While the Computer Is in Sleep

If your battery runs low while you are working, you can put your PowerBook to sleep and replace the battery with a charged one. The internal backup battery provides enough power to maintain the contents of RAM for one minute while you change the battery.

Charging a Battery

When the power adapter is connected, the battery is recharged whether the computer is off, on, or in sleep. However, the battery will recharge more quickly if the computer is off or in sleep. You can monitor the battery charge level.

- *In Mac OS X*, use the battery status icon in the menu bar.

- *In Mac OS 9*, use the battery charge level indicator in the Control Strip.

To maximize the life of your PowerBook battery, use the power adapter whenever possible.

Calibrating a New Battery for Best Performance

To get the longest running time from a new PowerBook battery, let the battery run down within the first week of use and then fully charge it one time. Follow these steps:

- 1 Plug in the power adapter and fully charge your PowerBook battery until the battery indicator lights and the onscreen meter indicate that the battery is fully charged.
- 2 Disconnect the power adapter and use your PowerBook until you see the first low battery warning dialog box on your screen.
- 3 Connect the power adapter and leave it connected until the battery is fully charged again.

Important You only have to fully discharge and then charge your battery once to calibrate it. After that, you can connect and disconnect the power adapter when the battery is at any charge level.

Battery-Conservation Tips

The amount of work time your PowerBook battery can provide before you need to recharge it depends on the equipment you're using with your computer and the steps you take to conserve power while you work.

To conserve battery power, do one or more of the following:

- Disconnect bus-powered USB or FireWire devices when they are not in use.
- Quit open applications that you are not using.
- Remove CD-ROM and DVD-ROM discs when they are not in use.
- Reduce screen brightness using the brightness controls on the PowerBook keyboard.

You can also:

- Set the hard disk to spin down after a short time.
- Set your PowerBook to sleep after inactivity of five minutes or less.

In Mac OS X, select “Reduce processor performance” in the Options tab of the Energy Saver pane of System Preferences to save battery power.

In Mac OS 9, select any of the following options in the Advanced Settings tab of the Energy Saver control panel:

- Allow processor cycling.
- Turn off the built-in display instead of dimming it.
- Reduce processor speed.
- Increase application idle time.

For More Information on Your PowerBook Battery

Additional information is available in Mac Help (see page 44). Choose Mac Help from the Help menu and search for “battery.”

DVD-ROM/CD-RW Combo Drive

Your PowerBook comes with a DVD-ROM/CD-RW Combo drive you can use to

- install or run programs from CD and DVD discs
- watch DVD-Video discs
- create your own music CDs and play them on any standard audio player
- record computer files, such as applications, documents, or other digital files, on CD-R and CD-RW discs

With a CD-R (CD-Recordable) disc, you can record information on the disc once. Although you can't change the recorded information, you may be able to add more information until the disc is full, depending on the application you use. See the documentation that came with your application for specific information about recording on your CD-R disc. It is best to use CD-R discs for recording audio CDs, because most audio CD players cannot read CD-RW discs.

With a CD-RW (CD-Rewritable) disc, you can save and change information on your CD multiple times. However, some software for recording media files on CDs, such as the iTunes Disc Burner feature, can record data on the disc only once.

Inserting a CD or DVD Disc

To install or use programs from a CD or DVD disc, follow these steps:

- 1 With the computer turned on, insert the disc (with the label facing up) into the drive slot until you feel the drive catch the disc and take it the rest of the way in. The disc may need to be inserted nearly all the way in before the drive takes it in the rest of the way. This is normal.

Note: Some DVD discs are two-sided.

- 2 When the icon for the disc appears on the desktop, the disc is ready to use.

Ejecting a Disc

To eject a disc, do one of the following:

- Drag the disc icon to the Trash.
- Press and hold the Media Eject (⏏) key on the keyboard until the disc ejects.

Allow the disc to fully eject before removing or reinserting it.

If you can't eject the disc, try the following:

- Quit any applications that may be using the disc and try again.
- Restart your computer and hold down the trackpad button during startup until the disc ejects.

Playing DVD Discs

To play a DVD-Video disc on your PowerBook, insert the DVD disc. DVD Player opens automatically and starts playing the disc.

If you use S-video to connect your PowerBook to a TV so that you can watch a DVD-Video on the TV screen, select 720 x 480 NTSC (in the United States) or 720 x 576 PAL (in Europe and other regions).

- *In Mac OS X*, use the Display tab of the Displays pane of System Preferences.
- *In Mac OS 9*, use the Resolution portion of the Control Strip.

Note: In Mac OS X, move the menu bar to the TV screen in the Arrange tab of the Displays pane of System Preferences.

You can easily connect your PowerBook to your stereo system. Use a miniplug-to-RCA cable (not included) to connect the headphone port (🎧) on your PowerBook to the audio input ports on your stereo.

Recording CD-R and CD-RW Discs

You can record music on CD-R or CD-RW discs right from your iTunes library.

- 1 Open iTunes, located in the Dock in Mac OS X and in the Control Strip in Mac OS 9.
- 2 Select the playlist you want to record.
- 3 Insert a blank CD-R or CD-RW disc.
- 4 Click Burn CD at the top of the iTunes window.

You can also record data on CD-R and CD-RW discs with Disc Burner.

- 1 Insert a blank disc in the optical drive.
- 2 In the dialog box that appears, enter a name for the disc and select a format. An icon for the CD appears on the desktop.
- 3 Drag files and folders to the icon.

Select the disc and choose Burn CD from the Special menu in Mac OS 9, or drag the CD icon to the Burn CD icon in the dock in Mac OS X.

Important Your PowerBook's DVD-ROM/CD-RW Combo drive supports standard circular 12 cm discs. Irregularly shaped discs or discs smaller than 12 cm are not supported. Noncircular discs may become lodged in the drive.

For More Information

- For information about how to use iTunes to record music files on a CD-R disc, see the onscreen help for iTunes in the Help Center. For instructions on using DVD Player, open DVD Player and choose DVD Player Help from the Help menu.

Keyboard Controls and Programmable Function Keys

You can quickly adjust settings such as volume and screen brightness and eject a CD or DVD disc using the keyboard controls.

Your PowerBook also has four additional keys that you can set up to open your frequently used applications or documents in Mac OS 9. These keys are known as *programmable* (or *hot*) *function keys*. For example, you can use these keys to open your Web browser, word processor, or favorite game. Once applications are open, you can use the keys to switch quickly between them.

Assigning Programmable Function Keys

In Mac OS 9, the first time you press one of the function keys, a dialog box appears that lets you assign any of the function keys to an application. After that, you can change function key assignments using the Keyboard control panel. This feature is only available in Mac OS 9.

Using the Standard Function Keys

You can quickly change a key from a control or programmable function key to a standard function key by pressing the Fn key while you press the other key. In Mac OS X, use the Keyboard pane of System Preferences to control the function keys. You can also use the Keyboard control panel in Mac OS 9 to reverse the keys so that the standard function keys are primary and the screen controls and programmable function keys are secondary. (You would hold down the Fn key to change the screen brightness, for example.)

Using the Embedded Numeric Keypad

Most desktop computer keyboards have a numeric keypad in addition to the regular keyboard keys. Your PowerBook keyboard has a numeric keypad incorporated in the standard keyboard keys. Keys used for the numeric keypad have a smaller secondary label.

To use the numeric keypad, press the Num Lock key on the keyboard. The light next to the Num Lock key turns on, indicating that the keypad is active. When you're finished, press the Num Lock key again to turn it off.

Note: When the numeric keypad is active, other keys and keyboard equivalents for menu commands (such as ⌘-Q to quit) are deactivated.

For More Information on Keyboard Controls

Additional information on configuring the keyboard controls and programmable function keys is available in Mac Help (see page 44). Choose Mac Help from the Help menu and search for “keyboard.”

Security Slot and Keyboard Lock

You can purchase a security cable lock to protect your PowerBook. With a lock, you can secure your computer to a desk or table.

Your PowerBook also comes with a keyboard locking mechanism. When the keyboard lock is engaged, the keyboard can't be flipped up for access to the internal components of the computer, including the memory.

The keyboard locking mechanism is in the small plastic tab to the left of the Num Lock key, which also contains the Num Lock indicator light. Your PowerBook comes with the keyboard unlocked.

To lock the keyboard, use a small flathead screwdriver to turn the screw clockwise 1/2 turn. A small tab prevents the keyboard from being removed.

Note: The screw that turns the plastic tab has a small notch on one side that you can use to determine if the keyboard is locked. If the notch in the screw is on the top, the keyboard is unlocked. If the notch in the screw is on the bottom, the keyboard is locked.

For More Information on Security Options

Additional information on the software security features of your PowerBook, including multiple user passwords and file encryption, is available in Mac Help (see page 44). Choose Mac Help from the Help menu and search for “security” or “multiple users.”

Note: If you are using Mac OS 9, the Password Security control panel used on older computers is not compatible with your PowerBook and is not installed on your computer.

Working With Your Operating System

An operating system, or OS, is your computer's desktop environment that defines how the items on your desktop are represented and how you interact with them. Each OS has a different look and feel.

Your computer comes with Mac OS X installed as the default operating system, and Classic, a technology that allows you to use Mac OS 9 applications inside Mac OS X. The first time you start your computer, it starts up using Mac OS X. Your computer also comes with Mac OS 9. To switch between Mac OS X and Mac OS 9, see “Switching Between Operating Systems” on page 69.

Some software applications have not yet been optimized to work with Mac OS X or Classic. They perform best in Mac OS 9. If you use only Mac OS 9-compatible software and do not need the special features of Mac OS X, you can start up your computer in Mac OS 9. This chapter describes some of the features of Mac OS X and Classic and how to switch your default operating system from Mac OS X to Mac OS 9.

About Mac OS X

Explore Mac OS X's advanced technologies, such as the elegant new user interface, incredible graphics capabilities, and added system stability and performance. Mac OS X manages your computer processes so you can concentrate on what you want to do. You don't need to worry about restarting your computer if something goes wrong with one software application. Mac OS X only shuts down that application so you can keep working without interruption. The Mac OS X virtual memory manager allots the amount of memory your software applications need to run efficiently. When you're ready to learn more about Mac OS X, read *Welcome to Mac OS X*. This book introduces the features of Mac OS X and provides tips for Mac OS 9 users on how to use Mac OS X to perform common Mac OS 9 tasks. If you experience any problems while learning about Mac OS X, see the Troubleshooting tips in the back of the book or choose Mac Help from the Help menu in Mac OS X.

Important Because Mac OS X is already installed on your computer, you don't need to follow the installation instructions in *Welcome to Mac OS X*. Instead, follow the instructions in *Welcome to Mac OS X* to log in and begin using Mac OS X.

Information About Software and Mac OS X

For information about the compatibility of software applications with Mac OS X, or to read more about Mac OS X, check the Apple Web site: guide.apple.com/macosex/

Using Classic in Mac OS X

In addition to using Mac OS X applications, you can continue to use Mac OS 9 applications in the special Classic environment. Classic works in the background to access Mac OS 9 features and software applications. When you start up Classic, Mac OS 9 software works in Mac OS X just as it does in Mac OS 9, but doesn't benefit from Mac OS X features such as the look of the new interface. Simply open a Mac OS 9 application or double-click a document created in a Mac OS 9 application. If Classic isn't running, it starts up.

Classic continues to run in the background, even if no Mac OS 9 applications are open, so applications and documents open faster and more easily. You can set your computer to start up Classic automatically when you log in to Mac OS X. Choose System Preferences from the Apple (🍏) menu, click Classic, and select "Start up Classic on login to this computer."

To quit the Classic environment, click Stop in the Classic pane of System Preferences. You can save any unsaved changes to your Classic documents and quit Classic.

Important Do not remove the Mac OS 9 operating system from your computer. For Classic to work, Mac OS 9 must be installed.

Switching Between Operating Systems

Your computer is set to use Mac OS X. You can switch between Mac OS X and Mac OS 9. Once you've set your computer to use OS X, it will always start up using OS X until you set it to use Mac OS 9.

To set your computer to start up using Mac OS 9:

- 1 Choose System Preferences from the Apple () menu and click Startup Disk.

- 2 Select the Mac OS 9 folder as your startup System Folder. (If the icons are dimmed, click the lock icon at the bottom of the pane and type the user name and password that you created previously in the Setup Assistant. See *Welcome to Mac OS X* for more information about logging in as an administrator.)
- 3 Restart your computer.

Some tasks and software applications require your computer to start up using Mac OS 9. You can change the Mac OS your computer uses as often as you like.

Note: Because Apple frequently releases new versions and updates to its system software, the version number of the Mac OS X and Mac OS 9 operating systems in this manual may be different from those installed on your computer.

To set your computer to start up using Mac OS X:

- 1 In Mac OS 9, choose Control Panels from the Apple (🍏) menu, then choose Startup Disk.
- 2 In the Startup Disk control panel, double-click the hard disk that contains your operating systems and select the Mac OS X System folder as your startup disk. You can click the triangle to the left of the hard disk icon to see the System folders installed on it.

Restart your computer.

Need Help?

For more information about the features of your Macintosh, choose Mac Help from the Help menu and click any of the blue underlined text. You can also type a question in the Search field and press Return on the keyboard.

Working Inside Your Computer

This chapter provides information and instructions for working inside your computer.

Instructions are provided for the following procedures:

- “Installing Additional Memory” on page 71
- “Removing the Internal Hard Disk” on page 80
- “Installing an AirPort Card” on page 88

Warning Apple recommends that you have an Apple-certified technician install memory or remove the internal hard disk. Consult the service and support information that came with your computer for instructions on how to contact Apple for service. If you attempt any of these procedures and damage your equipment, such damage is not covered by the limited warranty on your computer.

Installing Additional Memory

Your computer comes with two memory slots, one above the other, that you access by removing your PowerBook keyboard. Your computer comes with a minimum of 256 megabytes (MB) of Synchronous Dynamic Random-Access Memory (SDRAM) installed in the lower slot. Both memory slots can accept a SDRAM module that meets the following specifications:

- Small Outline-Dual Inline Memory Module (SO-DIMM) format
- 1.25 inch or smaller
- 128, 256, or 512 MB
- 144-pin
- PC-133 Type RAM

Depending on the configuration of the PowerBook you purchased, you may have an additional 256 MB of SDRAM installed in your computer’s upper slot.

SDRAM from an earlier PowerBook that meets these specifications can be used with your PowerBook.

The maximum amount of RAM you can install in your PowerBook is 1 GB, using 512 MB DIMMs in both the upper and lower RAM slots.

Installing Additional RAM

- 1 Shut down your computer. Disconnect the power adapter, phone cord, and any other cables connected to the computer.
- 2 Flip the computer over and remove the battery.

This prevents you from accidentally turning on the computer while installing memory.

Warning The internal components of your PowerBook may be hot. If you have been using your PowerBook, wait 30 minutes after shutting down your computer to let the internal components cool down before continuing.

- 3 Make sure that the keyboard locking screw is not in the locked position. Your new PowerBook comes with the keyboard unlocked, so unless you or someone else locked the keyboard, you can skip this step.

- 4 Release the keyboard by pulling down on the keyboard release tabs (located to the left of the F1 and F12 keys) and then lift the top portion of the keyboard.

- 5 Lift the top portion of the PowerBook keyboard up slightly near the top row of keys and pull it back far enough to displace the small tabs that hold the bottom of the keyboard in place.

- 6 Flip the keyboard over and lay it on the palm rests and trackpad.

- 7 Touch a metal surface inside the computer to discharge any static electricity.

- 8 Locate the RAM expansion slots.

- 9 Hold the RAM expansion card at a 30-degree angle. Line up the notch in the card with the small tab in the RAM expansion slot and slide the card into the slot until the gold edge is almost invisible. Then gently push the RAM expansion card into the expansion slot. You may feel some resistance.

- 10** Gently spread the small tabs in the expansion slot away from the notches and push the RAM expansion card down until the two snaps on either side of the card lock into place.

- 11** Flip the keyboard back on top of the opening in your PowerBook and insert the small tabs at the bottom of the keyboard all the way into the openings in the PowerBook case.

- 12** Pull down on the keyboard release tabs (located to the left of the F1 and F12 keys) and then press down on the top portion of the keyboard.

- 13** Let go of the keyboard release tabs to secure the keyboard in place.
- 14** Turn the PowerBook over and replace the battery.

- 15** Reconnect the power adapter and any other cables that were attached.

Removing Memory

- 1 Gently spread the small tabs in the expansion slot away from the notches in the memory card. The memory card should pop up slightly.

- 2 Lift the memory card to a 30-degree angle and then gently slide the card out of the expansion slot.

You can replace the RAM expansion card in the lower slot, and then add additional RAM to the upper slot.

Making Sure Your Computer Recognizes the New Memory

After installing additional memory in your PowerBook, check whether the computer recognizes the new memory. Do the following:

- 1 Start up your computer.

- 2 When you see the Mac OS desktop, choose About This Computer from the Apple () menu.

In Mac OS X

In Mac OS 9

The total includes the amount of memory that originally came with the computer plus the new memory you added. For a more detailed breakdown of the amount of memory installed in your computer, choose Apple System Profiler, located in the Utilities folder in the Applications folder in Mac OS X, and in the Apple () menu in Mac OS 9.

If the memory is not recognized or your computer does not start up correctly, shut down your PowerBook and check the instructions again to make sure that the memory you installed is compatible with this PowerBook and that it is installed correctly. If you still have problems, remove the memory and consult the service and support information that came with your computer for instructions on how to contact Apple for service.

Removing the Internal Hard Disk

When the computer is shut down, the internal hard disk can be removed for security or maintenance.

- 1 Shut down your computer. Disconnect the power adapter, phone cord, and any other cables connected to the computer.
- 2 Place a towel or soft cloth on a table in front of you. The towel or cloth will protect the keyboard and display of the PowerBook when you flip it over. Make sure that it covers an area large enough for your PowerBook and that it hangs over the edge of the table.
- 3 With the display open, carefully flip the PowerBook over and rest it on the edge of a table. Make sure the weight of the computer is on the table and not on the display.

Important Do not open the display further than the angle shown above.

- 4 Remove the battery by sliding the latch to the left. Make sure to return the battery latch fully to the right.

Warning The internal components of your PowerBook may be hot. If you have been using your PowerBook, wait 30 minutes after shutting down your computer to let the internal components cool down before continuing.

- 5 Using a Torx T-8 screwdriver, remove the seven screws that secure the bottom case of the PowerBook in the order shown in the illustration below.

- 6 Carefully slide the bottom case away from you.

- 7 Pivot the bottom case up as shown in the illustration below.

Important Do not twist the case from side to side. Slide the bottom case forward completely before lifting it up. If you feel any resistance when lifting the bottom case, double-check to make sure the bottom case is slid all the way forward and releases from the optical drive slot.

- 8 Touch a metal surface inside the computer to discharge any static electricity.

- 9** Disconnect the connector cable from the logic board.

- 10** With a Torx T-8 screwdriver, remove the two screws that secure the hard disk mounting bracket.

- 11 With a Torx T-8 screwdriver, remove the two screws that secure the hard disk carrier to the other mounting bracket and then gently remove the hard disk.

Replacing the Hard Disk and Bottom Case

Follow the steps in this section to replace the hard disk.

- 1 Make sure the screws and rubber stoppers are in place on the sides of the drive. Then make sure that the bottom and left and right sides of the drive are covered by the Mylar sheath.

- 2** Insert the left side of the disk first, then insert the right side of the disk.

- 3** With a Torx T-8 screwdriver, replace the two screws that secure the hard disk to the mounting bracket.

- 4 Connect the hard disk connector cable to the logic board.

- 5 Attach the bottom case to the computer and replace the seven screws in the order shown in the illustration below.

Line up the notches on the right and left sides of the case. Then press down slightly to secure the case. Make sure the seams between the bottom case and the frame are closed. Check the outside edges and around the battery bay. Check the alignment of the seven screw holes to make sure the bottom case is properly positioned.

- 6 Replace the battery and turn the computer over.

- 7 Look at the optical drive slot to make sure that the case is properly secured. If a gap exists below the optical drive slot, gently pull the bottom of the optical drive slot toward you to secure the optical drive to the bottom case and remove the gap.

- 8 Reconnect the power adapter and any other cables that were attached.

Installing an AirPort Card

If your computer did not come with an AirPort Card, you can purchase one from your Apple-authorized dealer or from the Apple Store at www.apple.com/store and install it yourself or have it installed by an Apple-authorized service provider.

To install an AirPort Card in your PowerBook, remove the back of your computer. Follow the instructions in the previous section, “Removing the Internal Hard Disk” on page 80, then follow these steps:

- 1 If your AirPort Card came with the AirPort adapter, remove the metal clip and pull the AirPort Card from the adapter. (The adapter and metal clip are not used with your PowerBook.)
- 2 Touch a metal surface inside the computer to discharge any static electricity.
- 3 Disconnect the AirPort antenna from its holder.

- 4 Position the AirPort Card with the AirPort ID numbers and bar code visible and slide the card into the connector.

Make sure to slide the card all the way in until you feel that the card is securely attached to the connector.

- 5 Connect the AirPort Card to the end of the antenna cable.

Make sure that the connector on the end of the antenna cable is straight before inserting it into the card. When it is connected, make sure the end of the antenna cable is secured by the small clip shown in the illustration below.

- 6 Fold the plastic tab on the AirPort Card over the top of the card.

Important The plastic tab must be folded over the card. If the tab is not folded over, you will not be able to securely attach the bottom case to the computer.

Attach the bottom case to the computer. Follow the instructions in the previous section, “Replacing the Hard Disk and Bottom Case,” beginning on page 84.

Troubleshooting

Occasionally you may have problems while working with your PowerBook. Usually it's because your software isn't properly configured or you're using applications or software extensions that are not compatible with the version of the Mac OS (system software) installed on your computer. Other less likely sources include problems with the Mac OS (usually fixed by reinstalling your computer's system software or through a software update) and problems with your computer's hardware, such as the memory or hard disk.

When you experience a problem with your computer, it is important to remember that there is usually a simple and quick solution. When you encounter a problem, be aware of the conditions that led up to the problem. Making a note of things you did before the problem occurred will help you narrow down the possible causes of the problem and then find the answers you need. Things to note include

- the applications you were using when the problem occurred (Problems that occur only with a specific application may indicate that the application is not compatible with the version of the Mac OS installed on your computer.)
- any software that you recently installed, especially any software that may have added items to the System Folder (Certain applications install extensions that may not be compatible with the version of the Mac OS installed on your computer.)
- any new hardware (such as additional memory or a peripheral) that you installed

Information in This Chapter

This chapter contains solutions to problems that prevent you from working with your computer, such as a system freeze or a computer that will not start up. You can find more troubleshooting information in Mac Help (see page 44), on the Apple Support Web site at www.apple.com/support and the Apple Knowledge Base at kbase.info.apple.com

Problems That Prevent You From Using Your Computer

If the computer won't respond or the pointer won't move

- Press the Command (⌘) and period keys at the same time and, if a dialog box appears, click Cancel.
- If that doesn't work, hold down the Option and Command (⌘) keys and then press the Esc key. If a dialog box appears, click Force Quit. Then save your work in any open applications and restart the computer to be sure the problem is entirely cleared up.
- If you are unable to force the application to quit, press and hold the Power button (⏻) for a few seconds to shut down the computer.
- If the computer still doesn't respond, try to restart it by simultaneously pressing the Command (⌘) and Control keys on your keyboard and the Power button (⏻).

If the problem occurs frequently, choose Mac Help from the Help menu. Look at the section on how to prevent and solve problems. You may need to check for extension conflicts or reinstall your computer's system software. If the problem occurs only when you use a particular program, check with the program's manufacturer to see if it is compatible with your computer.

If the computer freezes during startup or you see a flashing question mark

Mac OS X does not use system extensions. To turn off extensions in Classic, do the following:

- *In Mac OS X*, choose Turn Off Extensions from the pop-up menu in the Advanced tab of the Classic pane of System Preferences. Click Restart Classic.
- *In Mac OS 9*, turn off your system extensions by starting up your computer while holding down the Shift key.
- If that does not work, start up your PowerBook while holding down the C key and at the same time insert your Mac OS X or Mac OS 9 system software CD. (Make sure the Caps Lock key is not engaged.)

After the computer starts up, choose Mac Help from the Help menu. Look at the section on how to prevent and solve problems. You may need to check for extension conflicts or reinstall your computer's system software.

If using your system software CD is the only way you can start up your PowerBook, you need to reinstall your computer's system software. For instructions, look in Mac Help or open the software installation or restore program and follow the onscreen instructions.

If the computer won't turn on or start up

- Make sure the power adapter is plugged into the computer and into a functioning power outlet.
- Your battery may need to be recharged. Press the small button on the battery (see page 57). You should see one to four lights indicating the battery's level of charge.

- If that does not work, press the Power button (⏻) and immediately hold down the Command (⌘), Option, P, and R keys until you hear the startup sound a second time.
- If you recently installed additional memory, make sure that it is correctly installed and that it is compatible with your computer. See whether removing it allows the computer to start up.
- If you are still unable to start up your computer, see the service and support information that came with your PowerBook for information on contacting Apple for service.

If the display suddenly goes black or if your system freezes while you are working

You will need to restart your system.

- 1 Unplug any devices that are connected to your PowerBook ports except the power adapter.
- 2 Hold down the Command (⌘) and Control keys and press the Power button (⏻) to restart the system.
- 3 Let the battery charge to at least 10% before plugging in any external devices and resuming your work. To see how much the battery has recharged, look at the battery status icon in the menu bar.

Restoring Your Computer's Software

Apple Software Restore completely erases the contents of your hard disk or partition and restores the original contents, including the original system software, factory settings, and applications that came with your computer.

Should you need to restore your computer software, use the Apple Software Restore CDs that came with your computer. First back up essential software and files, if possible.

Note: If you don't want to erase the contents of your hard disk, you can reinstall just the system software or certain applications using the software install CDs or application CDs that came with your computer. For instructions on installing Mac OS 9 and Mac OS X, see the *Welcome to Mac OS X* booklet.

- 1 Make sure you have all the Apple Software Restore CDs that came with your computer.
- 2 Insert the first software restore CD into your drive.
- 3 Restart your computer and then hold down the C key so the computer starts from the CD.
- 4 Follow the onscreen instructions.

The first time you restart your computer, the Setup Assistant opens to help you configure your computer in Mac OS 9 or Mac OS X.

Other Problems

If you have a problem with a software program

- For problems with software from a manufacturer other than Apple, contact the manufacturer. Often software manufacturers provide updates to their software on their Web sites. You can configure your PowerBook to automatically check for and install the latest Apple software using the Software Update control panel in Mac OS 9 or the Software Update pane of System Preferences in Mac OS X. For more information, choose Mac Help from the Help menu and search for “software update.”

If you have problems with your Internet connection

- Make sure your telephone line or network cable is connected and functioning properly.
- If you are using a dialup Internet connection, make sure that your telephone cord is plugged into the modem port (marked with the icon ) and not the Ethernet port (marked with the icon ).
- Choose Mac Help from the Help menu. There you will find how to locate your Internet settings and the contact information for your Internet service provider (if you used the Setup Assistant to get your Internet account).

If you have a problem using your computer or working with the Mac OS

- If the answers to your questions are not in this manual, look in Mac Help for instructions and troubleshooting information.
- Check the Apple Support Web site at www.apple.com/support for the latest troubleshooting information and software updates.

If you suspect a problem with your computer hardware

- You can use the Apple Hardware Test CD to help determine if there is a problem with one of your computer’s components, such as the memory or processor.

Locating Your Product Serial Number

The serial number for your PowerBook is located on the inside wall of the battery bay. For instructions on removing the battery, see “Removing and Replacing the Battery” on page 58. The serial number is also on the System Profile tab of Apple System Profiler, located in the Utilities folder inside the Applications folder in Mac OS X, and in the Apple menu in Mac OS 9.

Specifications

This section provides basic product specifications. Additional information is available in Apple System Profiler on your hard disk and on the Internet at www.apple.com/powerbook and www.apple.com/support

Apple System Profiler

You can use Apple System Profiler to find out detailed information about your specific model of PowerBook, such as the amount of built-in memory, hard disk size, devices connected, and the product serial number.

To access the information in Apple System Profiler:

- *In Mac OS X*, open Apple System Profiler, located in the Utilities folder inside the Application folder.

Click the triangles in the window to show and hide information in the different categories.

- *In Mac OS 9*, choose Apple System Profiler from the Apple () Menu.

PowerBook Specifications

Processor, Memory, and Hard Disk

- *Processor:* PowerPC G4 processor with a minimum of 667 megahertz (MHz)
- *Memory:* Minimum of 256 megabytes (MB); maximum of 1 gigabyte (GB)
- *Hard disk:* Minimum 30 GB

Video Memory and Graphics

- *Video memory:* 32 MB DDR SDRAM
- *Graphics controller:* ATI Mobility Radeon 7500

Modem

- *Modem standards:* K56flex and V.90
- *Modem speed:* 56 kilobits per second (Kbps)

Note: Download speeds vary with line conditions and the modem capabilities of your Internet service provider (ISP). FCC regulations limit ISP transmission speeds to 53 Kbps in the United States.

AirPort Card

- *Wireless data rate:* Up to 11 megabits per second (Mbps)
- *Range:* Up to 150 feet (45) meters in typical indoor use (varies with building)
- *Frequency band:* 2.4 gigahertz (GHz)

Power Adapter

- *Input:* AC 100–240 volts (V), 50/60 hertz (Hz)
- *Output:* DC 24 V, 1.875 A

Battery

- *Output:* DC 14.4 V
- *Capacity:* 3840 milliampere-hours (mAh)

External Monitor in Dual Display or Video Mirroring Mode

With the display set to 1280 x 854 and millions of colors, an external VGA monitor or digital display can be supported at the following resolutions up to millions of colors:

- 640 x 480, 640 x 870, 800 x 600, 832 x 624, 1024 x 768,
1152 x 870, 1280 x 960, 1280 x 1024, 1600 x 1200,
1792 x 1344, 1856 x 1392, 1920 x 1440, and 2048 x 1536

Choosing a resolution greater than 1280 x 854 in video mirroring mode causes the image on the external monitor to scale down (not take up the entire screen) to match the 1280 x 854 resolution of the internal display.

External Monitor in Display Closed Mode

When the PowerBook display is closed, an external VGA monitor can be supported at the following resolutions up to millions of colors:

- 640 x 480, 640 x 870, 800 x 600, 832 x 624, 1024 x 768, 1152 x 870, 1280 x 960, 1280 x 1024, 1600 x 1200, 1792 x 1344, 1856 x 1392, 1920 x 1440, and 2048 x 1536

External S-Video or Composite Television (NTSC)

An external NTSC video device or TV can be supported at the following resolutions up to millions of colors:

- 640 x 480, 720 x 480 (NTSC only), 800 x 600, 832 x 624, and 1024 x 768 at 60 Hz

External S-Video or Composite Television (PAL)

An external PAL video device or TV can be supported at the following resolutions up to millions of colors:

- 640 x 480, 720 x 576, 800 x 600, 832 x 624, and 1024 x 768 at 50 Hz

Size and Weight

- *Height:* 1.0 in. (26 mm)
- *Width:* 13.4 in. (341 mm)
- *Depth:* 9.5 in. (241 mm)
- *Weight:* 5.4 lb. (2.4 kg)

Note: Weight varies depending on configuration and manufacturing process.

Operating Environment

- *Operating temperature:* 50° F to 95° F (10° C to 35° C)
- *Storage temperature:* -13° F to 140° F (-25° C to 60° C)
- *Altitude:* 3048 m (10,000 ft.) maximum
- *Shipping altitude:* 10668 m (35,000 ft.) maximum
- *Relative humidity:* 20% to 80% noncondensing

Care, Use, and Safety Information

Cleaning Your PowerBook

Follow these general rules when cleaning the outside of your computer and its components:

- Use a damp, soft, lint-free cloth to clean the computer's exterior. Avoid getting moisture in any openings.
- Don't use aerosol sprays, solvents, or abrasives.

Cleaning Your PowerBook Display

To clean your PowerBook screen, do the following:

- Shut down your PowerBook.
- Dampen a clean, soft, lint-free cloth or paper with water only and wipe the screen. Do not spray liquid directly on the screen.

Carrying Your PowerBook

If you carry your PowerBook in a bag or briefcase, make sure that there are no loose items (such as paper clips or coins) that could accidentally get inside the computer through the slot for the DVD-ROM/CD-RW Combo drive.

Storing Your PowerBook

If you are going to store your PowerBook for an extended period of time, do one of the following to prevent your PowerBook battery from becoming completely depleted:

- Keep the power adapter connected.
- Fully charge your PowerBook battery before storing the computer.
- Fully charge and then remove your PowerBook battery when storing your computer (especially important when storing your computer for longer than 5 months).

Safety Instructions for Setting Up and Using Your Computer

Plugging In the Power Adapter

Always leave space around your power adapter. Do not use this equipment in a location where airflow around the power adapter is confined. Always disconnect the power adapter and remove the battery before opening the computer to perform procedures such as installing memory or removing the hard disk.

Warning Use only the power adapter that came with your PowerBook computer. Adapters for other electronic devices (including other PowerBook models and other portable computers) may look similar, but they may damage your computer.

Connecting a Phone Line to the Internal Modem

Always disconnect the phone cord before opening the computer to perform procedures such as installing memory or removing the hard disk.

Warning Do not connect a digital telephone line to the modem, because the wrong type of line could damage the modem.

Using Your PowerBook

When using your PowerBook or when charging the battery, it is normal for the bottom of the case to get warm. The bottom of the PowerBook case functions as a cooling surface that transfers heat from inside the computer to the cooler air outside. The bottom of the case is raised slightly to allow airflow that keeps the unit within normal operating temperatures.

Warning Do not place your PowerBook on a pillow or other soft material when it is on, as the material may block the air flow vents and cause the computer to overheat.

Warning Never turn on your computer unless all of its internal and external parts are in place. Operating the computer when it is open or missing parts can be dangerous and damage your computer.

Important Keep the PowerBook's internal display open at a 90-degree or greater angle when your PowerBook is attached to an external display and running in dual display or video mirroring mode. This allows for proper air circulation over the keyboard and assists with heat dissipation.

General Safety Instructions

For your own safety and that of your equipment, always take the following precautions.

Disconnect the power plug (by pulling the plug, not the cord), remove the main battery, and disconnect the phone cord if any of the following conditions exists:

- You want to remove any parts (leave the cords disconnected as long as the keyboard is open)
- The power cord or plug becomes frayed or otherwise damaged
- You spill something into the case
- Your computer is exposed to rain or any other excess moisture
- Your computer has been dropped or the case has been otherwise damaged
- You suspect that your computer needs service or repair
- You want to clean the case (use only the recommended procedure described earlier)

Important The only way to disconnect power completely is to unplug the power cord and phone cords, and remove the battery. Make sure at least one end of the power cord is within easy reach so that you can unplug the computer when you need to.

Be sure that you always do the following:

- Keep your computer away from sources of liquids, such as drinks, washbasins, bathtubs, shower stalls, and so on.
- Protect your computer from dampness or wet weather, such as rain, snow, and so on.
- Read all the installation instructions carefully before you plug your computer into a wall socket.
- Keep these instructions handy for reference by you and others.
- Follow all instructions and warnings dealing with your system.

Warning Electrical equipment may be hazardous if misused. Operation of this product, or similar products, must always be supervised by an adult. Do not allow children access to the interior of any electrical product and do not permit them to handle any cables.

Warning Never push objects of any kind into this product through the openings in the case. Doing so may be dangerous and result in fire or a dangerous electric shock.

Ergonomics

Keyboard and trackpad

When you use the keyboard and trackpad, your shoulders should be relaxed. Your upper arm and forearm should form an angle that is slightly greater than a right angle, with your wrist and hand in roughly a straight line.

Use a light touch when typing or using the trackpad and keep your hands and fingers relaxed. Avoid rolling your thumbs under your palms.

Change hand positions often to avoid fatigue. Some computer users may develop discomfort in their hands, wrists, or arms after intensive work without breaks. If you begin to develop chronic pain or discomfort in your hands, wrists, or arms, consult a qualified health specialist.

Chair

An adjustable chair that provides firm, comfortable support is best. Adjust the height of the chair so your thighs are horizontal and your feet flat on the floor. The back of the chair should support your lower back (lumbar region). Follow the manufacturer's instructions for adjusting the backrest to fit your body properly.

You may have to raise your chair so your forearms and hands are at the proper angle to the keyboard. If this makes it impossible to rest your feet flat on the floor, you can use a footrest with adjustable height and tilt to make up for any gap between the floor and your feet. Or you may lower the desktop to eliminate the need for a footrest. Another option is to use a desk with a keyboard tray that's lower than the regular work surface.

External mouse

If you use an external mouse, position the mouse at the same height as your keyboard and within a comfortable reach.

Built-in display

Adjust the angle of the display to minimize glare and reflections from overhead lights and windows.

You can adjust the brightness of the screen when you take the computer from one work location to another, or if the lighting in your work area changes.

Laser Information

Warning Making adjustments or performing procedures other than those specified in your equipment's manual may result in hazardous radiation exposure.

Do not attempt to disassemble the cabinet containing the laser. The laser beam used in this product is harmful to the eyes. The use of optical instruments, such as magnifying lenses, with this product increases the potential hazard to your eyes. For your safety, have this equipment serviced only by an Apple-authorized service provider.

Your computer is a Class 1 laser product. The Class 1 label, located in a user-accessible area, indicates that the drive meets minimum safety requirements. A service warning label is located in a service-accessible area. The labels on your product may differ slightly from the ones shown here.
