Motor Control Design Solutions

Motor Control Design Solutions

Microchip Technology offers a broad product portfolio that provides a complete system solution for your stepper motor, brushed DC motor, AC induction motor, variable speed brushless DC motor, and switched reluctance motor applications. With our sophisticated development systems and technical documentation, Microchip makes it easy for designers of all experience levels to complete a high performance electronic motor control design quickly and cost effectively. Only Microchip provides everything a motor control design engineer needs: low-risk product development, lower total system cost, faster time to market, outstanding technical support and dependable delivery and quality.

Microchip's Recommended Solutions for Motor Control Designs*

Motor Type	PIC® 8-bit Microcontrollers	dsPIC® 16-bit Digital Signal Controllers**	MOSFET Drivers	Fan Managers	Analog Peripherals	Development Tools
Stepper	PIC16F684 PIC16F716 PIC16F7X7	dsPIC30F5015	TC141X TC442X TC446X	--	-MCP606, MCP616 Op Amps -TC913X Auto-Zeroed Op Amps -TC7652 Chopper Op Amp -TC74, TC1047A, TC6501 Temperature Sensors -TC102X, TC654X Voltage Comparators	-Motor Control Graphical User Interface -dsPIC™ Motor Control Development System
Brushed DC	PIC16F684 PIC16F716	dsPIC30F2010	TC141X TC442X	TC642 TC647B TC670	-MCP606, MCP616 Op Amps -TC913X Auto-Zeroed Op Amps -TC7652 Chopper Op Amp -TC74, TC1047A, TC6501 Temperature Sensors -TC102X, TC654X Voltage Comparators	-Motor Control Graphical User Interface -TC642EV Fan Controller Evaluation Kit -dsPIC Motor Control Development System
AC Induction	PIC16F7X7 PIC18FXX31	dsPIC30F2010 dsPIC30F3011 dsPIC30F5015 dsPIC30F6010	--	--	-MCP606, MCP616 Op Amps -TC913X Auto-Zeroed Op Amps -TC7652 Chopper Op Amp -TC74, TC1047A, TC6501 Temperature Sensors -TC102X, TC654X Voltage Comparators	-Motor Control Graphical User Interface -PICDEM™ MC Development Board -dsPIC Motor Control Development System
Variable Speed Brushless DC	PIC18FXX31	dsPIC30F2010 dsPIC30F3011 dsPIC30F5015 dsPIC30F6010	TC141X TC442X	TC642 TC647B TC670	-MCP606, MCP616 Op Amps -TC913X Auto-Zeroed Op Amps -TC7652 Chopper Op Amp -TC74, TC1047A, TC6501 Temperature Sensors -TC102X, TC654X Voltage Comparators	-Motor Control Graphical User Interface -PICDEM MC Development Board -TC642EV Fan Controller Evaluation Kit -dsPIC Motor Control Development System
Switched Reluctance	PIC18FXX31	dsPIC30F2010 dsPIC30F3011 dsPIC30F5015 dsPIC30F6010	TC141X TC442X	--	-MCP606, MCP616 Op Amps -TC913X Auto-Zeroed Op Amps -TC7652 Chopper Op Amp -TC74, TC1047A, TC6501 Temperature Sensors -TC102X, TC654X Voltage Comparators	-Motor Control Graphical User Interface -dsPIC Motor Control Development System

*This table represents a sampling of device solutions recommended for motor control design. Microchip's broad portfolio of 8-bit microcontrollers, 16-bit digital signal controllers, analog and interface products, serial EEPROMs and related development systems contains hundreds of products that could potentially be used for motor control design, depending upon the application requirements.

**Please check with your local Microchip distributor, sales representative or sales office for availability and the latest product information.

Advanced On-chip Peripherals

Microchip offers dedicated families of PIC 8-bit microcontrollers (MCUs) and dsPIC 16-bit digital signal controllers (DSCs) that provide on-chip peripherals to design high-performance precision motor control systems that are more energy efficient, quieter in operation, have greater range and an extended life:

- High-speed 10-bit analog-to-digital converter (up to 500 ksps operation)
- High-endurance data EEPROM (up to 4K bytes)
- Specialized motor control PWM, up to eight channels and four duty cycle generators with flexible modes of operation
- Up to eight Enhanced Capture, Compare, PWM (ECCP) modules
- Quadrature Encoder (Interface or Input Captures)

Mixed-Signal Power Devices

For advanced high voltage, power management technology, turn to an industry leader -- International Rectifier (IR). IR's iMOTION™ product portfolio for motor control designs includes insulated gate bipolar transistors (IGBTs), high voltage IC drivers, advanced power modules integrating IGBTs with 3-phase IC drivers, and switch mode power supply controllers (SMPSSs). The latest integrated inverter modules, in a sleek and compact single in-line package (IRAM family), make IR an excellent choice for the power stage in motor control. For more information, go to www.irf.com.

Complete Technical Resources for Motor Control Design

Microchip makes it easy to add electronic motor control functionality to your embedded design. For access to Microchip's complete motor control design resources, visit the Motor Control Design Center at www.microchip.com/motor. Whether you are a motor control expert or a beginner, this dedicated site provides you everything you need to complete your motor control design, including:

- Design Flow Charts. Microchip has taken the difficulty out of the motor control design process with this online resource. Starting with the motor control type, users walk through all of the required steps and questions in order to create a high-performance motor control design.
- Applications by Motor Type. This online table captures numerous end applications and their typical motor types for the industrial, automotive, consumer and appliance market segments.
- Technical Documentation. Microchip offers a variety of motor control-related application notes (see partial list to the right), reference designs and other technical documentation to help speed design time. This technical library provides both theory and operation considerations for a variety of motor types.

Application Notes

Stepper Motor

- AN822 Stepper Motor Microstepping with PIC18C452
AN906 Stepper Motor Control Using the PIC16F684
AN907 Stepper Motor Fundamentals

Brushed DC Motor

- AN532 Servo Control of a DC Brush Motor
AN696 PIC18CXXX/PIC16CXXX DC Servomotor
AN718 Brush-DC Servomotor Implementation Using PIC17C756A
AN893 Low-cost Bidirectional Brushed DC Motor Control Using the PIC16F684
AN905 Brushed DC Motor Fundamentals

AC Induction Motor

- AN843 Speed Control of a 3-Phase Induction Motor Using PIC18 Microcontrollers
AN861 Smart Air Handler Using ProMPT™ and PIC18F2539
AN887 AC Induction Motor Fundamentals
AN889 VF Control of 3-Phase Induction Motors Using PIC16F7X7 Microcontrollers
AN900 VF Control of 3-phase AC Induction Motors Using the PIC18F4431
AN908 Using the dsPIC30F for Vector Control of an AC Induction Motor

Variable Speed Brushless DC Motor

- AN857 Brushless DC Motor Control Made Easy
AN885 Brushless DC (BLDC) Motor Fundamentals
AN899 Brushless DC Motor Control Using PIC18FXX31
AN901 Using the dsPIC30F for Sensorless BLDC Control

General

- AN894 Motor Control Sensor Feedback Circuits
AN898 Determining MOSFET Driver Needs for Motor Drive Applications

Development Systems

Microchip offers a number of development boards and evaluation kits that demonstrate the capabilities of its motor control silicon solutions. All of the hardware and software is included to control the supported motor types. These tools make it easy to customize the software for specific motors.

Motor Control Graphical User Interface

The MC-GUI graphical user interface allows users to configure the motor and a wide range of system parameters for a selected motor type, including speed, rotation direction, current, heatsink temperature, fault status and much more. Available at no cost, this Windows® based software program supports Microchip's motor control demonstration boards to provide a complete solution that helps reduce design time.

PICDEM™ MC Development Board

The PICDEM MC Development Board (DM183011) gives you everything you need to evaluate Microchip's high performance PIC18FXX31 8-bit microcontrollers for motor control design. Supporting motors up to 800 Watts, the tool provides total isolation between power and control circuits, enabling users to plug in the MPLAB® In-Circuit Emulator or MPLAB In-Circuit Debugger to the board when high power is connected.

dsPIC30F Motor Control Development System

This high performance modular system provides a method for quick prototyping and validation of various motor types. The tools give you the flexibility to select the appropriate power modules to meet your needs. Start with the dsPICDEM™ MC1 Motor Control Development Board (DM300020) and add the appropriate power module and motor for a complete system:

- dsPICDEM MC1H 3-Phase High-Voltage Power Module (DM300021)
- 3-Phase AC Induction Motor High-Voltage Motor (208/460V) (AC300021)
- dsPICDEM MC1L 3-Phase Low-Voltage Power Module (DM300022)
- 3-Phase Brushless DC Low-Voltage Motor (24V) (AC300020)

Other Development Tools

Take advantage of Microchip's world-class development tools for PIC 8-bit microcontrollers and dsPIC 16-bit digital signal controllers, including programmers, emulators, debuggers, and additional evaluation kits. Operating under the free MPLAB Integrated Development Environment, Microchip's development systems are easy-to-use and help reduce design time.

MOSFET Drivers for Motor Control Applications

Device	Configuration	Peak Output Current (A)	Output Resistance (Ohms)	Maximum Supply Voltage (V)
TC1410/11/12/13	Single	0.5 - 3.0	15/15 - 2.5/2.5	16
TC4421/22	Single	9	1.4 (typ)/1.7	18
TC4423/24/25	Dual	3	5/5	18
TC4426A/27A/28A	Dual	1.5	9/9	18
TC4467/68/69	Quad	1.2	15/15	18

Fan Managers for Motor Control Applications

Device	Description	Typical Accuracy (°C)	Maximum Accuracy @ 25 °C (°C)	Maximum Temperature Range (°C)	Vcc Range (V)	Maximum Supply Current (µA)
TC642	Fan Manager	Note 1	Note 1	-40 to +85	3.0 to 5.5	1,000
TC647B	Fan Manager	Note 1	Note 1	-40 to +85	3.0 to 5.5	400
TC670	Predictive Fan Fault Detector	N/A	N/A	-40 to +85	3.0 to 5.5	150

Note 1: These devices use an external temperature sensor. Accuracy of the total solution is a function of the accuracy of the external sensor.

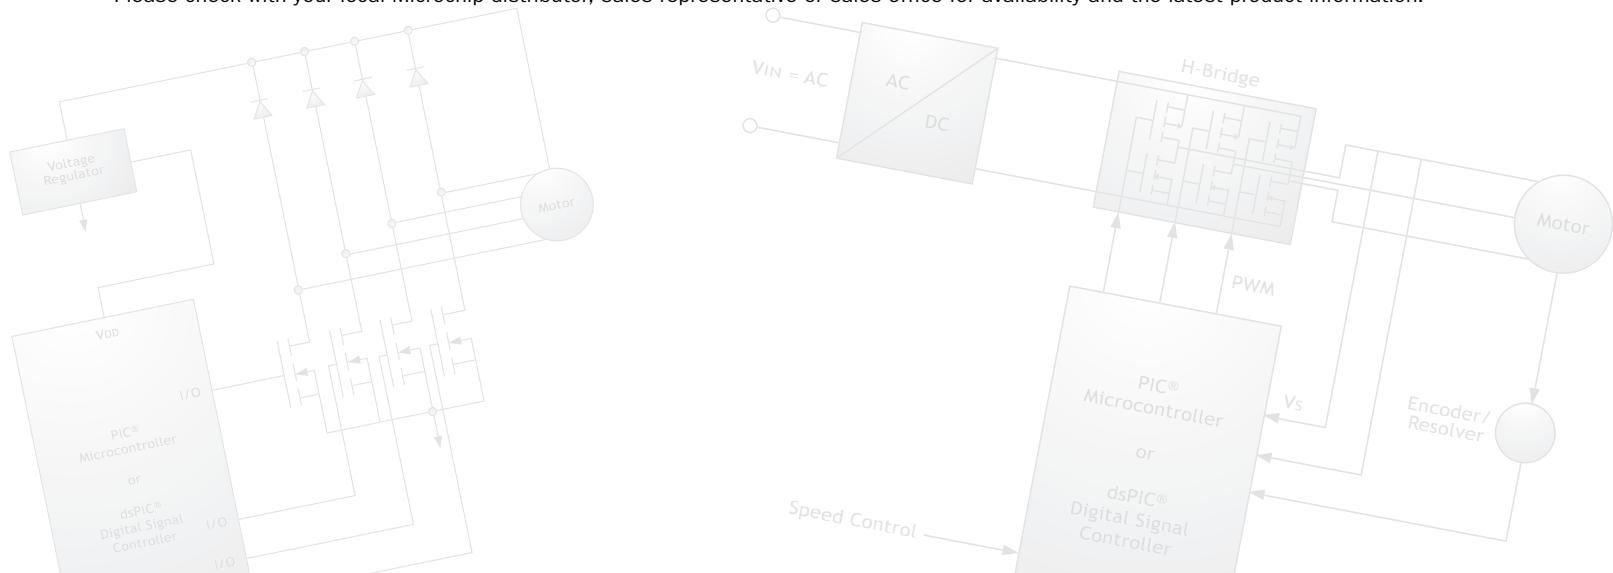

PIC® 8-bit Microcontrollers for Motor Control Applications

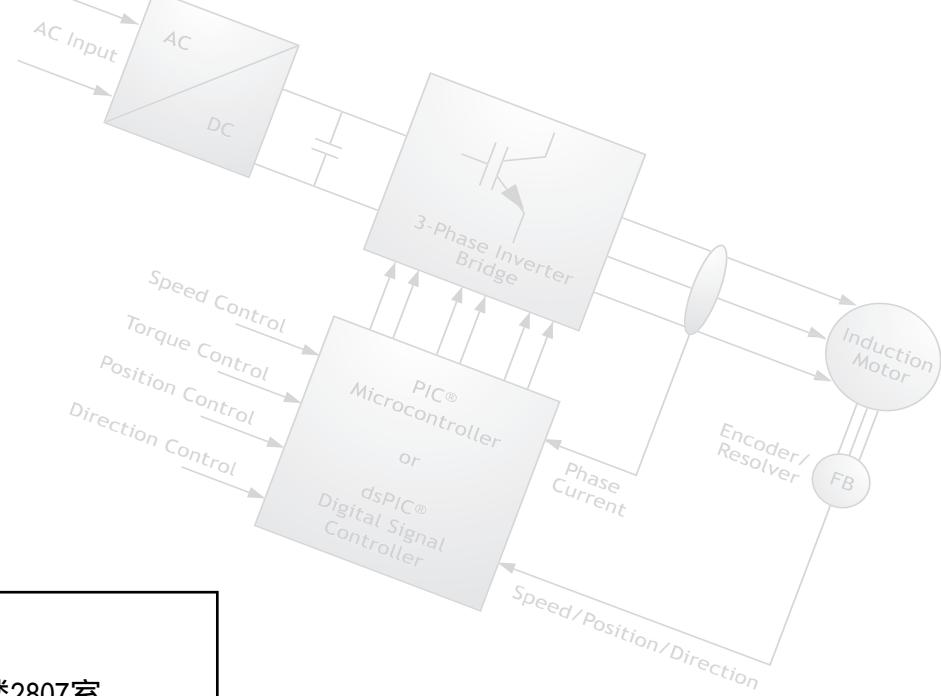

Product	Pins	Flash KB	SRAM Bytes	EE Bytes	Timer 8/ 16-Bit	Comp	CCP/ECCP	Motor Control PWM	A/D 10-Bit	Quad Enc	UART	SPI™/I²C™
