The products and systems described in this catalog are manufactured and sold according to a certified quality and environmental management system (acc. to ISO 9001 and ISO 14001). (DQS Certificate Reg. No. DQS 003473 QM UM). The certificate is accepted in all IQNet countries.

© Siemens AG 2008

8DJ20 switchgear is a factory-assembled, type-tested, metal-enclosed switchgear for indoor installation.

Typical uses

8DJ20 switchgear is used for power distribution in substations – even under severe environmental conditions, such as:

- Industrial environments
- Damp, sandy or dusty areas
- Simple outdoor substations

Main uses

- Compact substations
- Compact transformer substations, e. g. for wind power stations
- Garage and vault substations
- Underground and underfloor substations
- Sidewalk substations, e.g. containing switchgear with a very small overall width – in particular the basic versions of schemes 10, 32 and 71 – in conurbations
- Substations with control aisle

Technology

- Switchgear design with up to 5 feeders
- Maintenance-free
- Climate-independent
- Partition class: PM (metallic partition)
- Three-pole primary enclosure, metal-enclosed
- Insulating gas SF₆
- Welded switchgear vessel without seals, made of stainless steel, with welded-in bushings for electrical connections and mechanical components
- Three-position switch-disconnector with load-break and make-proof earthing function
- Cable connection for bushings with outside cone
- Connection with cable plugs – In ring-main feeders with bolted contact (M16) – In transformer feeders with plug-in contact

- **Option:** Connection with conventional sealing ends
 - For thermoplastic-insulated cables via elbow adapter AKE 20/630 (make Siemens)
 - For paper-insulated mass-impregnated cables via commercially available adapter systems
- Easy installation

Personal safety

- Safe-to-touch and hermetically-sealed primary enclosure
- HV HRC fuses and cable sealing ends are only accessible when outgoing feeders are earthed
- Operation only possible when enclosure is closed
- Logical mechanical interlocking
- Capacitive voltage detecting system to verify safe isolation from supply
- Feeder earthing by means of make-proof earthing switches

Security of operation

- Hermetically-sealed primary enclosure independent of environmental effects such as pollution, humidity and small animals – sealed for life:
 - Welded switchgear vessel
 - Welded-in bushings and operating mechanism
- Operating mechanism parts maintenance-free (IEC 62 271-1/VDE 0671-1)
- Operating mechanisms of switching devices located outside the switchgear vessel (primary enclosure)
- Switchgear interlocking system with logical mechanical interlocks

Cost-efficiency

Extremely low “life-cycle costs” throughout the entire product service life as a result of:

- Maintenance-free concept
- Climatic independence
- Minimum space requirements
- Maximum availability

Standards

see page 21

Features

Our product range extends from switchgear installed in a radial transformer panel (individual panel) to switchgear with 5 feeders, consisting of

- Ring-main feeders
- Transformer feeders with HV HRC fuse assemblies
- Circuit-breaker feeders (for the complete product range see Supplements to Catalogs HA 45.31/41.11 – 2006)

The switchgear is available in three overall heights:

- 1200 mm (with low subframe)
- 1400 mm and 1760 mm (with high subframe)

These overall heights cover all areas of application, from compact substations to switchgear rooms with control aisle.

Basic design

- Manual operating mechanism
- Transformer cable connection at the front (standard)
- With logical mechanical interlocks
- With ready-for-service indicator
- With capacitive voltage detecting system at the ring-main feeders

Options (others on request)

- Capacitive voltage detecting system at the transformer feeders
- Motor operating mechanisms for the three-position switch-disconnectors
- Auxiliary switch for three-position switch-disconnector and make-proof earthing switch
- Short-circuit indicator with built-in housing
- Surge arresters for ring-main feeders
- Shunt releases for transformer feeders
- Secondary equipment for remote operation or remote indication, e.g. with local-remote switch in the case of motor operating mechanisms or "tripped signal" in the case of transformer feeders
- Locking devices
- Closing lock-out
- De-earthing lock-out
- Cable clamps

Ambient air temperature T (operating conditions acc. to IEC 62 271-200/Clause 2 or IEC 62 271-1)						
– Without secondary equipment	– 40 to + 70 °C ⁵⁾	→				
– With secondary equipment, class "Minus 5 indoor"	– 5 to 55 °C ⁵⁾	→				
Pressure values at 20 °C for the insulation:						
Rated filling level p_{re}	1500 hPa (absolute)	→				
Minimum functional level p_{me}	1300 hPa (absolute)	→				

- 1) According to some national requirements, higher values of the rated short-duration power-frequency withstand voltage available for $I_k = 20$ kA with:
 - 42 kV for phase-to-phase, phase-to-earth and open contact gap as well as
 - 48 kV across the isolating distance
 Higher values of the rated lightning impulse withstand voltage:
 - 95 kV for phase-to-phase, phase-to-earth and open contact gap as well as
 - 110 kV across the isolating distance
 - 2) For overall height of switchgear 1200 mm: Cable bracket below the feeder
 - 3) Cable fixing by customer (the switchgear is supplied without cable bracket)
 - 4) In case of scheme 01 the cable compartment cover is bolted. The transformer connection is effected via the bushings arranged underneath the switchgear vessel. The transformer feeder is earthed by the three-position switch
 - 5) Temperature range, reduced normal currents at ambient air temperatures > + 40 °C
 - 6) Surge arrester type RDA with RICS (Tyco Electronics) not possible for a height of 1200 mm
- o. r. = on request

- 1) Depending on the relevant equipment, e.g. motor operating mechanism
 - 2) Additional wall distance required: ≥ 15 mm
 - 3) For cable routing of transformer cables downwards
- * Scheme is also suitable for outdoor enclosure (see pages 18 and 19)

Abbreviations:

RK = Ring-main feeder K = Cable feeder T = Transformer feeder
K(E) = Cable feeder for radial cable connection with make-proof earthing switch

Design

Panel design (example)

Three-position switch-disconnector, operating mechanisms

Three-position switch-disconnector

The switching device used is the proven three-position switch-disconnector

Functions

- Load-break function
- Earthing function with short-circuit making capacity
- Switch positions
CLOSED – OPEN – EARTHED

Operating mechanisms

The three-position switch-disconnector is operated from the switchgear front via

Detachable lever mechanism (standard)

- Spring-operated mechanism
 - With "spring-operated CLOSED" and "spring-operated OPEN" for installation in ring-main feeders
- Spring-operated/stored-energy mechanism
 - With "spring-operated CLOSED" and "spring-operated OPEN" for installation in transformer feeders
 - With an additional energy store for the function "stored-energy OPEN" after tripping by the HV HRC fuse (striker tripping) or by the shunt release

Options

- Motor operating mechanism for switch-disconnector
- Rotary operating mechanism
- Locking devices
- Auxiliary contacts for three-position switch-disconnector and make-proof earthing switch
- Shunt release for transformer feeders
- Closing lock-out for ring-main feeders
- De-earthing lock-out for transformer feeders
- Different operating levers ¹⁾ for the operating mechanisms of the switch-disconnector and of the make-proof earthing switch

1) According to VDN */VDEW ** recommendation

* Association of German Network Operators VDN e.V. at the VDEW in Germany (as of 2003)

** Association of German Power Stations – VDEW e.V.

Three-position switch-disconnector

Switchgear vessel of a ring-main/transformer block, scheme 10 (rear view)

- 1 Three-position switch-disconnector in the transformer feeder
- 2 Three-position switch-disconnector in the ring-main feeders
- 3 Pressure relief device

Operating mechanisms

Control board for detachable lever mechanisms (standard)

Example: Ring-main/transformer block, scheme 10

- 4 Locking device (option) for the detachable lever mechanism
- 5 Detachable lever operation for the earthing function
- 6 Detachable lever operation for the load-break function
- 7 Detachable lever mechanism for the ring-main feeder
- 8 Detachable lever mechanism for the transformer feeder

Control board for rotary operating mechanisms (option)

- Example: Ring-main feeder
- 9 Symbols for the actuating direction of the rotary operating mechanism
 - 10 Locking device for the rotary operating mechanism

- 11 Rotary operating mechanism (option)

Components

HV HRC fuse assembly, secondary equipment, pressure absorber system

HV HRC fuse assembly

The HV HRC fuse boxes are single-phase insulated and located above the transformer feeder outside the switchgear vessel.

Standards (see page 21)

HV HRC fuse links with striker in "medium" version according to

- IEC 60 282-1
- VDE 0670 Parts 4 and 402
- DIN 43 625 main dimensions

Features

- Requirements fulfilled as HV alternating current switch-fuse combination
- Selection of HV HRC fuses for transformers
- For further features see Catalog HA 40.1

Secondary equipment (option)

- Auxiliary switches, motor operating mechanisms or shunt releases wired to a terminal strip
- Location of the terminal strip next to the operating mechanism module of the feeder concerned
- Customer-side cable routing to the terminal strip from the side or rear

Pressure absorber system (option)

- Maintenance-free
- For all schemes (except radial transformer panel, scheme 01)
- For rated short-time withstand current $I_k \leq 16$ kA, with IAC (internal arc classification, see page 22)
- With 105 mm deep pressure relief duct for pressure relief upwards
- For overall height of switchgear:
 - Standard: 1400 mm
 - Option: 1760 mm
- For wall-standing arrangement
- Transformer cable routing:
 - Standard: Downwards
 - Option: To the rear for schemes 10, 71 and 72
- Weight approx. 110 kg

HV HRC fuse compartment

HV HRC fuse compartment with cable compartment cover removed

- Phase L1:
HV HRC fuse box with HV HRC fuse slide removed
- Phase L2:
HV HRC fuse box closed
- Phase L3:
Replacement of HV HRC fuses

Secondary equipment (option)

Auxiliary switch, motor operating mechanism and shunt release

- Example: Transformer feeder
- 1 Wiring duct
 - 2 Terminal strip
 - 3 Auxiliary switch at spring-operated mechanism of a ring-main feeder
 - 4 Auxiliary contactors (standard for motor operating mechanism)
 - 5 Motor operating mechanism at spring-operated/stored-energy mechanism
 - 6 Locking device (standard for motor operating mechanism)
 - 7 Shunt release at spring-operated/stored-energy mechanism

Pressure absorber system (option)

Sectional views of the pressure absorber system

- 1 Wall distance
- 2 Pressure absorber system with rear pressure relief duct directed upwards
- 3 Cable bushing
- 4 Divided floor plate for cable entry for on-site installation
- 5 Floor opening for the cable feeder

- Bushings according to EN 50 181/DIN EN 50 181 ¹⁾ with outside cone
- Cable connection at one level
- Access to the cable compartment only if the feeder has been isolated and earthed

Ring-main cable connection

- With bolted contact (M16) as interface type "C" according to EN 50 181/DIN EN 50 181
- For thermoplastic-insulated cables
- For paper-insulated mass-impregnated cables with adapter systems
- For conventional cable sealing ends via elbow adapters AKE 20/630 (make Siemens)
- For cable T-plugs or cable elbow plugs with bolted contact (M16)
- For connection cross-sections up to 300 mm² (standard)
- Cable routing downwards, cable connection at front
- For rated normal currents of 400/630 A

Options

- Suitable for the connection of surge arresters
- Short-circuit/earth-fault indicator
- Mounted cable clamps
- Double cable connection with corresponding cable plugs

Transformer cable connection

- With plug-in contact as interface type "A" according to EN 50 181/DIN EN 50 181
- For cable elbow plugs (standard) or straight cable plugs with plug-in contact
- For thermoplastic-insulated cables
- For connection cross-sections up to 120 mm²
- For rated normal currents of 200 A

Options

- With bolted contact (M16) as interface type "C" according to EN 50 181/DIN EN 50 181
- Mounted cable clamps
- Cable routing to the rear (for cable elbow plugs)

Cable connection (examples)

Cable compartment, as delivered

Cable plugs with bolted contact (M16)

Cable connections in ring-main feeder

- 1 Prepared for cable plugs with bolted contact (M16)
- 2 Phase L1: Make: Euromold type K400 LB as cable elbow plug
- 3 Phase L2: Make: Euromold type K400 TB as cable T-plug
- 4 Phase L3: Make: Euromold type AGT 20/630 as cable T-plug

Option:
Mounted cable clamps

Cable compartment, as delivered

Cable elbow plugs with plug-in contact

Cable connections in transformer feeder

- 5 Prepared for cable elbow plugs with plug-in contact
- 6 Phase L1: Make: Euromold type K158 LR
- 7 Phase L2: Make: nkt cables type EASW 20/250
- 8 Phase L3: Make: Cooper type DE 250-R-C

Option:
Mounted cable clamps

Transformer cable connection for cable plugs

Standard: With plug-in contact as interface type "A"

Option: With bolted contact (M16) as interface type "C"

Arrangement of connections	Cable routing	Cable plug version
----------------------------	---------------	--------------------

For all schemes (except scheme 01)

At the front (standard)	Downwards	Cable elbow plug with plug-in contact Option: Cable plug with bolted contact (M16)
At the bottom (option)	To the rear ²⁾	Cable elbow plug with plug-in contact
	Downwards	Straight cable plug with plug-in contact Option: Straight cable plug with bolted contact (M16)

Only for scheme 01 (radial transformer panel 1T)

At the bottom (standard)	To the rear ²⁾ (standard)	Cable elbow plug with plug-in contact
	Downwards (option)	Straight cable plug with plug-in contact Option: Straight cable plug with bolted contact (M16)

1) Standard EN 50 181/DIN EN 50 181: "Plug-in bushings above 1 kV up to 36 kV and from 250 A to 1.25 kA for equipment other than liquid-filled transformers."

2) For cable routing of the transformer feeder to the rear: Cable fixing by customer

Cable plugs, cable sealing ends and cable clamps are not included in the scope of supply.

Dimensions

Switchgear (for floor openings and fixing points refer to page 14)

Radial transformer panels · optionally in 3 overall heights

- 1 Bushing at the front for cable routing downwards (infeed)
Standard: For cable elbow plugs with plug-in contact
Option: For cable T-plugs with bolted contact (M16)
- 2 Bushing at the bottom as interface type "A" with plug-in contact for cable routing to the rear (feeder T)
- 3 Bushing at the bottom as interface type "A" with plug-in contact for cable routing downwards (feeder T)
- 4 Bolted joint of cable compartment cover (only for scheme 01)

- * Dimension depending on the bushing size and make/type of cable plug
- ** Dimensions depending on the overall heights of switchgear 1200 and 1400 mm
- *** For cable routing to the rear, the depth dimensions are 10 mm deeper
- △△ Dimension for bushing as interface type "A" with plug-in contact

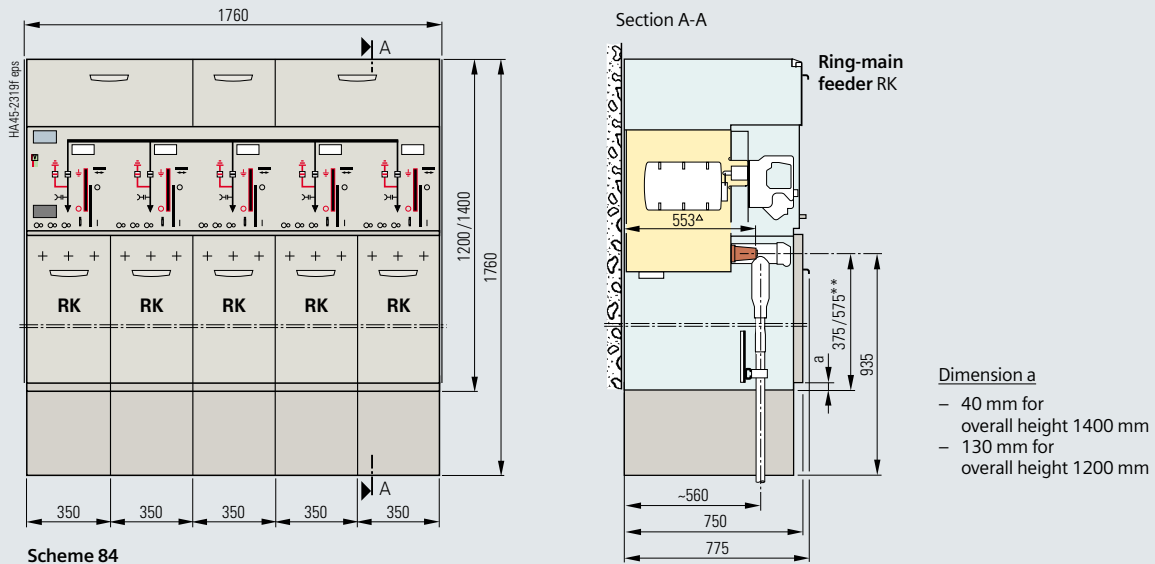

- 1 Bushing at the front (standard) for cable routing downwards
- 2 Bushing at the bottom (option) for cable routing to the rear or downwards

- * Dimension depending on the bushing size and make/type of cable plug
- ** Dimensions depending on the overall heights of switchgear 1200 and 1400 mm

Position of the floor openings and fixing points for double cable connection in ring-main feeders

Scheme 10 *
(example)

Note:

Double cable connection in ring-main feeders only possible for switchgear with an overall height of 1400 mm

Abbreviations

RK = Ring-main feeder
T = Transformer feeder

- * Complete dimensions see top figure on the left
- ** Depending on the cable plug used (see also page 16)
- *** 300 mm deeper cable compartment cover version
- **** 105 mm deeper cable compartment cover version

Dimensions

Examples *** for cable connection in ring-main feeders

Cable connection (examples for overall height 1400 mm)

Standard cable compartment cover

Cable compartment cover for double cable connection

Cable connection with surge arresters (examples for overall height 1400 mm)

Overall height of switchgear: 1400 mm

- 5 Cable plug, make Tyco Electronics, type RICS 5139
- 6 Surge arrester, make Tyco Electronics, up to type RDA21 and type RDA24

Dimension a

- 610 mm up to type RDA21
- 635 mm for type RDA24

Overall height of switchgear: 1200 mm

Numbers 5 and 6 not possible

Standard cable compartment cover

Combination on request

- 7 Elbow adapter, make Siemens, type AKE 20/630 with conventional cable sealing end, make Lovink Enertech, type IAE 20
- 8 On request: Surge arrester, make Siemens

Standard cable compartment cover

- 9 Cable plug, make Süd kabel, type SET (12/24)
- 10 Surge arrester, make Süd kabel, type MUT (13/23)

25 mm deeper cable compartment cover

- 11 Cable plug, make Süd kabel, type SEHDT (13/23)
- 12 Surge arrester, make Süd kabel, type MUT (12/22)
- or
- 11 Cable plug, make Euromold, type (K)400 TB/G
- 12 Surge arrester, e.g. make Euromold, type 400 Pb or similar types of construction

150 mm deeper cable compartment cover

△ Dimension for bushing with bolted contact (M16)
* Max. mounting space for cable and/or surge arrester

** Depth of floor opening
*** Non-binding examples; further examples see Catalog HA 40.1

Types of transport

8DJ20 switchgear is delivered as complete transport unit.

The following must be noted:

- Transport facilities on site
- Transport dimensions and weights
- Size of door openings in building
- Switchgear with LV compartment: Please take other transport dimensions and weights into account

Packing

Place of destination inside Germany or other European countries

- Means of transport: Rail and truck
- Type of packing:
 - Panels on open pallets
 - Covered with PE protective foil

Place of destination overseas

- Means of transport: Ship
- Type of packing:
 - Panels on open pallets
 - In closed crates with sealed PE protective foil
 - With desiccant bags
 - With sealed wooden base
 - Max. storage time: 6 months

Scheme no.	Version (abbreviations)	Switch-gear height (with-out ¹⁾ LV compartment) mm	Transport dimensions ¹⁾			Volume m ³	Gross ²⁾ weight approx. kg
			Width m	Height m	Depth m		

Transport in Europe by rail, truck, container

Abbreviations: RK = Ring-main feeder
T = Transformer feeder
K(E) = Cable feeder for radial cable connection with make-proof earthing switch

Designs

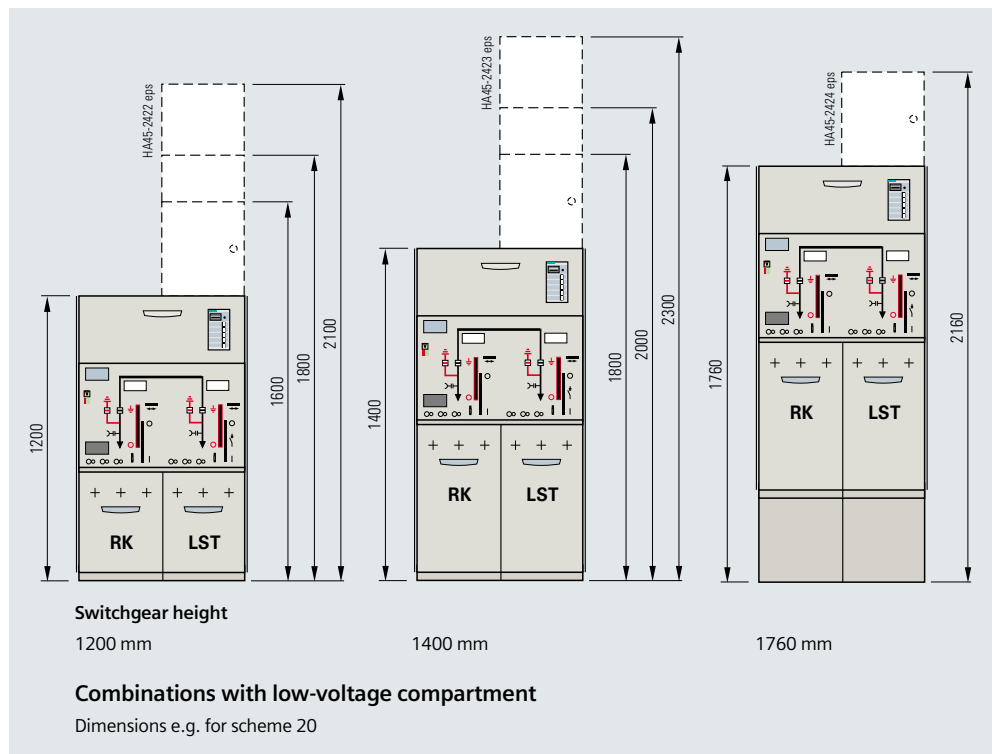

Switchgear with low-voltage compartment, switchgear installation

Option low-voltage compartment

- Overall height
 - Standard: 400 mm
 - Option: 600 or 900 mm
 - Option: Cover
- Installation on the switchgear
 - Possible per feeder
 - Customer-specific configuration
 - Separate cable duct on the switchgear next to the low-voltage compartment

Shipping and transport data

If the switchgear is delivered with low-voltage compartment, other transport dimensions and weights have to be taken into account.

Switchgear installation

Wall-standing arrangement

Direction of pressure relief	Downwards
Overall height 1200 mm	Downwards
Overall height 1400 mm	Downwards Option: to the rear
Overall height 1760 mm	Downwards Option: to the rear

Free-standing arrangement (on request)

(Switchgear installation only for pressure relief downwards)

Special Designs

Outdoor enclosures with 8DJ20 switchgear

Application

8DJ20 switchgear in outdoor enclosures is used where the network structure requires this, but without transformers and low-voltage distribution boards.

Features

- Two sizes
 - For switchgear with 3 feeders
 - For switchgear with 4 feeders
- Degree of protection IP 44
- 8DJ20 switchgear installed in outdoor enclosure
- Cable compartment partitioned off adjacent feeders
- With lockable door
- Complete interlocking functions

Cable connection

See pages 9 and 16.

- Cable entry from below
- Floor cover
 - Divided and bolted
 - Removable for inserting the cables
- Cable bracket movable upwards or to the rear to suit cable sealing ends
- Cables fixed by cable clamps (option) on C-rails of cable bracket
- Option: Cable clamps

Schemes

- For 3-panel outdoor enclosure:
 - Scheme 10
 - Scheme 32
- For 4-panel outdoor enclosure:
 - Scheme 70
 - Scheme 71
 - Scheme 81

** Option: Surge arrester
Only such surge arresters can be used which are suitable for a cable compartment cover flush with the operating front, e.g. make Tyco Electronics, type RDA (see also Catalog HA 40.1 "Cable connections").

For 3-panel switchgear

Outdoor enclosure with 2-wing door
Overall width 1150 mm

As above, however with doors removed, some cable compartment covers removed

For 4-panel switchgear

Outdoor enclosure with 2-wing door
Overall width 1500 mm

As above, however with doors removed

Special Designs

Outdoor enclosures with 8DJ20 switchgear

Dimensions

Outdoor enclosure with 2-wing door for 3-panel switchgear

Sectional view of transformer feeder

Outdoor enclosure with 2-wing door for 4-panel switchgear

Sectional view of ring-main feeder

- 1 Door of outdoor enclosure
- 2 Floor fixing 4 x Ø14 mm
- 3 HV HRC fuse assembly
- 4 Operating mechanism
- 5 Switchgear vessel
- 6 Bushing for cable connection
- 7 Cable elbow plug with plug-in contact
- 8 Cable T-plug with bolted contact (M16)
- 9 Pressure relief device
- 10 Wall distance ≥ 200 mm

* Floor fixing dimension

For position of incoming cables see pages 14 and 15

For cable connections with surge arresters see page 16

Overview of standards (March 2008)

		IEC standard	VDE standard	EN standard
Switchgear	8DJ20	IEC 62 271-1 IEC 62 271-200	VDE 0671-1 VDE 0671-200	EN 62 271-1 EN 62 271-200

Installation	–	IEC 61 936-1	VDE 0101	–

1) Only for switchgear type 8DH10

Standards

The 8DJ20 switchgear complies with the relevant standards and specifications applicable at the time of type tests.

In accordance with the harmonization agreement reached by the countries of the European Community, their national specifications conform to the IEC standard.

Dielectric strength

See also Catalog HA 40.1 "Standards".

Terms

"Make-proof earthing switches" are earthing switches with short-circuit making capacity according to IEC 62 271-102/ VDE 0671-102.

Type of service location

8DJ20 switchgear can be used as indoor installations in accordance with IEC 61 936 (Power installations exceeding 1 kV AC) and VDE 0101:

- Outside lockable electrical service locations at places which are not accessible to the public. Enclosures of switchgear can only be removed with tools.
- Inside lockable electrical service locations. A lockable electrical service location is a place outdoors or indoors that is reserved exclusively for housing electrical equipment and which is kept under lock and key. Access is restricted to authorized personnel and persons who have been properly instructed in electrical engineering. Untrained or unskilled persons may only enter under the supervision of authorized personnel or properly instructed persons.

Internal arc classification (option)

The possibility of arc faults in gas-insulated switchgear type 8DJ20 is improbable and a mere fraction of that typical of earlier switchgear types, due to:

- Use of gas-filled switchgear compartments
- Use of suitable switching devices such as three-position switches with make-proof earthing switch
- Logical mechanical interlocks
- Use of ring-core current transformers (option)

Optionally, switchgear type 8DJ20 can be designed with internal arc classification:

- Internal arc classification **IAC**
- Type of accessibility **A** (for authorized personnel only)
 - Accessible sides
 - Side **F** (front)
 - Side **L** (lateral)
 - On request: Side **R** (rear)
- Arc test current up to 21 kA / 1 s

Climate and environmental influences

8DJ20 switchgear is completely enclosed and insensitive to climatic influences.

- Climatic tests fulfilled in accordance with IEC 60 932 (report)
- All medium-voltage devices (except for HV HRC fuses) are installed in a gas-tight, welded stainless-steel switchgear vessel which is filled with SF₆ gas
- Live parts outside the switchgear vessel are provided with single-pole enclosure
- At no point can creepage currents flow from high-voltage potentials to earth
- Operating mechanism parts which are functionally important are made of corrosion-proof materials
- Bearings in operating mechanisms are designed as dry-type bearings and do not require lubrication
- Suitable instrument transformer designs

Standards

Classification

Classification of 8DJ20 switchgear according to IEC 62 271-200

Design and construction

Partition class	PM (metallic partition)
Loss of service continuity category ¹⁾ Switchgear – With HV HRC fuses – Without HV HRC fuses (RK, T, LST)	LSC 2A LSC 2B
Accessibility to compartments (enclosure) – Busbar compartment – Switching-device compartment – Low-voltage compartment (option) – Cable compartment – Switchgear with HV HRC fuses (T...) – Switchgear without HV HRC fuses – Switchgear scheme 01 (1 T)	Access option – Non-accessible – Non-accessible – Tool-based – Interlock-controlled – Interlock-controlled – Tool-based

Internal arc classification (option)

Designation of internal arc classification IAC IAC for – Wall-standing arrangement (standard)	Rated voltage 7.2 kV to 24 kV IAC A FL 21 kA, 1 s
Type of accessibility A – F – L	Switchgear in closed electrical service location, access "for authorized personnel only" (acc. to IEC 62 271-200) Front Lateral
Arc test current ²⁾	Up to 21 kA
Test duration	1 s

1) The loss of service continuity category is always referred to the complete switchgear, i.e. the panel with the lowest category defines the loss of service continuity category of the complete switchgear.

2) 8DJ20 switchgear with pressure absorber:
Arc test current up to 16 kA, for overall height of switchgear 1400 and 1760 mm.

If not stated otherwise on the individual pages of this catalog, we reserve the right to include modifications, especially regarding the stated values, dimensions and weights.

Drawings are not binding.

All product designations used are trademarks or product names of Siemens AG or other suppliers.

If not stated otherwise, all dimensions in this catalog are given in mm.
