

FEATURES

- 50V Operation
- *Guaranteed* 1% Initial Voltage Tolerance
- *Guaranteed* 0.01%/V Line Regulation
- *Guaranteed* 0.5% Load Regulation
- *Guaranteed* 0.02%/W Thermal Regulation
- 100% Burn-in in Thermal Limit

APPLICATIONS

- Adjustable Power Supplies
- System Power Supplies
- Precision Voltage/Current Regulators
- On-Card Regulators

DESCRIPTION

The LT137AHV/LM137HV negative high voltage adjustable regulators will deliver up to 1.5 Amps output current over an output voltage range of -1.2V to -47V . Linear Technology has made significant improvements in these regulators compared to previous devices, such as better line and load regulation, and a maximum output voltage error of 1% for the LT137AHV and LT337AHV.

Every effort has been made to make these devices easy to use and difficult to damage. Internal current and power limiting coupled with true thermal limiting prevents device damage due to overloads or shorts, even if the regulator is not fastened to a heat sink.

Maximum reliability is attained with Linear Technology's advanced processing techniques combined with a 100% burn-in in the thermal limit mode. This assures that all device protection circuits are working and eliminates field failures experienced with other regulators that receive only standard electrical testing. For performance curves and applications circuits see the LT137A series data sheet.

The ● denotes the specifications which apply over the full operating temperature range.

The shaded electrical specifications indicate those parameters which have been improved or guaranteed test limits provided for the first time.

Note 1: Unless otherwise indicated, these specifications apply:
 $|V_{IN} - V_{OUT}| = 5V$; and $I_{OUT} = 0.1A$ for the H package, $I_{OUT} = 0.5A$ for the K package. Power dissipation is internally limited. However, these specifications apply for power dissipation up to 2W for the H package and 20W for the K package. $I_{MAX} = 1.5A$ for the K package, and 0.2A for the H package.

Note 2: Testing is done using a pulsed low duty cycle technique. See thermal regulation specifications for output changes due to heating effects. Load regulation is measured on the output pin at a point 1/8 inch below the base of the K and H package.

Note 3: Guaranteed on the LT137AHV and LT337AHV, but not 100% tested in production.
