SEMICONDUCTOR

74LCX162244 Low Voltage 16-Bit Buffer/Line Driver

with 26Ω Series Resistors in Outputs

General Description

The LCX162244 contains sixteen non-inverting buffers with 3-STATE outputs designed to be employed as a memory and address driver, clock driver, or bus oriented transmitter/receiver. The device is nibble controlled. Each nibble has separate 3-STATE control inputs which can be shorted together for full 16-bit operation.

The LCX162244 is designed for low voltage (2.5V or 3.3V) $\rm V_{CC}$ applications with capability of interfacing to a 5V signal environment.

In addition, the outputs include equivalent 26Ω (nominal) series resistors to reduce overshoot and undershoot and are designed to sink/source up to 12 mA at $V_{CC}=3.0V.$

The LCX162244 is fabricated with an advanced CMOS technology to achieve high speed operation while maintaining CMOS low power dissipation.

September 2000 Revised August 2001

'4LCX162244 Low Voltage 16-Bit Buffer/Line Driver with 26 Ω Series Resistors in Outputs

Ordering Code:

Order Number	Package Number	Package Description
74LCX162244GX (Note 1)		54-Ball Fine-Pitch Ball Grid Array (FBGA), JEDEC MO-205, 5.5mm Wide [TAPE and REEL]
74LCX162244MEA (Note 2)	MS48A	48-Lead Small Shrink Outline Package (SSOP), JEDEC MO-118, 0.300" Wide
74LCX162244MTD (Note 2)	MTD48	48-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 6.1mm Wide

Features

■ 5V tolerant inputs and outputs

2.3V–3.6V V_{CC} specifications provided

reduce overshoot and undershoot

 \blacksquare ±12 mA output drive (V_{CC} = 3.0V)

■ ESD performance:

■ Latch-up performance exceeds 500 mA

Human body model > 2000V

Machine model > 200V

(FBGA) (Preliminary)

5.3 ns t_{PD} max (V_{CC} = 3.0V), 20 μA I_{CC} max

Power down high impedance inputs and outputs

■ Implements patented noise/EMI reduction circuitry

■ Also packaged in plastic Fine-Pitch Ball Grid Array

 \blacksquare Outputs include equivalent series resistance of 26 Ω to

make external termination resistors unnecessary and

Note 1: BGA package available in Tape and Reel only.

Note 2: Devices also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

Functional Description

The LCX162244 contains sixteen non-inverting buffers with 3-STATE standard outputs. The device is designed with 26 Ω series resistors in the outputs. This design reduces line noise in applications such as memory address drivers, clock drivers and bus transceiver/transmitters. The device is nibble (4 bits) controlled with each nibble functioning identically, but independent of the other. The control pins

Logic Diagram

74LCX162244

can be shorted together to obtain full 16-bit operation. The

3-STATE outputs are controlled by an Output Enable (\overline{OE}_n)

input for each nibble. When \overline{OE}_n is LOW, the outputs are in 2-state mode. When \overline{OE}_n is HIGH, the outputs are in the

high impedance mode, but this does not interfere with

entering new data into the inputs.

Note 3: The Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the Absolute Maximum Ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 4: I_O Absolute Maximum Rating must be observed.

Note 5: Unused control inputs must be held HIGH or LOW. They may not float.
