查询RC0431供应商

RC0431A (RC431A)

Low-Voltage Adjustable Precision Shunt Regulator

Features

- Low voltage operation to 1.24V
- 1% reference voltage tolerance
- Output voltage adjustable from V_{ref} to 12V
- Low 80µA operational cathode current
- 0.25Ω typical output impedance
- TO-92, SOT23-3 and SOT23-5 packages

Applications

- Voltage reference for discrete power circuits

Description

The RC0431A is a low-voltage 3-terminal adjustable precision voltage reference regulator. It has an excellent thermal stability over the standard commercial temperature range. The output voltage can be set to any value between Vref (1.24V) and 12V using two external resistors. The RC0431A operates from a lower voltage (1.24V) than the traditional shunt regulator references which operate from 2.5V. When used with an optocoupler, the RC0431A will be an ideal voltage reference in an isolated feedback circuit for use in switched-mode power supplies and modular DC-DC converters. The RC0431A has a low output impedance of active output circuitry offering a very sharp turn-on characteristic. The RC0431A will be an excellent replacement for low-voltage zener diodes in many applications such as on-board regulation and adjustable power supplies.

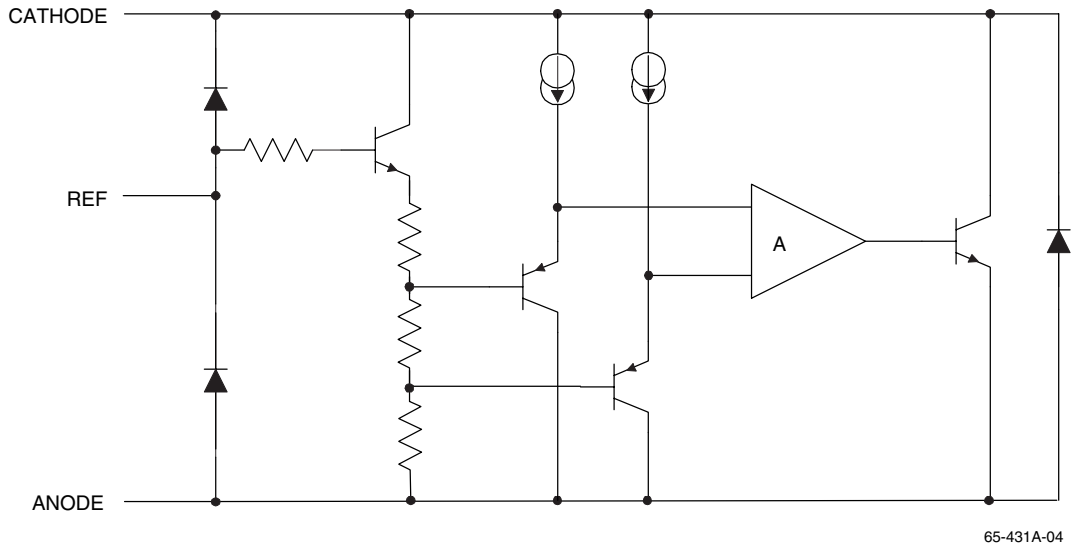
Equivalent Schematic



65-431A-04

Absolute Maximum Ratings

Ratings are over full operating free-air temperature range unless otherwise noted.

Cathode voltage, V_{KA}	13.2V
Continuous cathode current I_K	–20mA to 20mA
Reference current, I_{ref}	–0.05mA to 3mA
Power dissipation	See Dissipation Rating Table
Storage temperature range	-65° to 150°C

Notes:

1. Functional operation under these conditions is not implied. Permanent damage may occur if the device is subjected to conditions outside these ratings.

Recommended Operating Conditions

Parameter	Min.	Max.	Units
Cathode voltage, V_{KA}	V_{REF}	12	V
Cathode current, I_K	0.1	15	mA
Operating temperature range in free-air, T_A	0	70	°C

Dissipation Rating Table

Package	Power Rating $T_A \leq 25°C$	Derating Factor $T_A \geq 25°C$	Power Rating $T_A = 70°C$
TO-92	775mW	6.2mW/°C	496mW
SOT23-5	150mW	1.2mW/°C	96mW

Electrical Specifications

T_A = 25°C (unless otherwise noted), at free-air

Symbol	Parameters	Conditions	Min.	Typ.	Max.	Units
V_{ref}	Reference Voltage	$V_{KA} = V_{ref}$, T_A = 25°C	1.228	1.24	1.252	V
		I_K = 10mA, T_A = 0 to 70°C	1.221		1.259	
$V_{ref\ (dev)}$	V_{ref} deviation over full temperature range (see note 2)	$V_{KA} = V_{ref}$, I_K = 10mA, See note 2 and Figure 1.		4	12	mV
$\frac{\Delta V_{ref}}{\Delta V_{KA}}$	Ratio of V_{ref} change in cathode voltage change	I_K = 10mA, $\Delta V_{KA} = V_{ref}$ to 6V. See figure 2.		-1.5	-2.7	$\frac{mV}{V}$
I_{ref}	Reference terminal current	I_K = 10mA, R1 = 10KΩ, R2 = ∞ See figure 2.		0.15	0.5	µA
$I_{ref(dev)}$	I_{ref} deviation over full temperature range (see note 2)	I_K = 10mA, R1 = 10KΩ, R2 = ∞ See note 1 & figure 2.		0.05	0.3	µA
$I_{K(min)}$	Minimum cathode current for regulation	$V_{KA} = V_{ref}$ See figure 1.		55	80	µA
I_{off}	Off-state cathode current	V_{KA} = 6V, V_{ref} = 0 See figure 3.		0.001	0.1	µA
$\lvert Z_{KA} \rvert$	Dynamic impedance (see note 3)	$V_{KA} = V_{ref}$, f ≤ 1KHz I_K = 0.1mA to 15mA, See figure 1.		0.25	0.4	Ω

Notes:

1. Functional operation under these conditions is not implied. Permanent damage may occur if the device is subjected to conditions outside these ratings.
2. Full temperature range is 0°C to 70°C.
3. The deviation parameters $V_{ref(dev)}$ and $I_{ref(dev)}$ are defined as the differences between the maximum and minimum values obtained over the rated temperature range. The average full-range temperature coefficient of the reference input voltage, ∞V_{ref}, is defined as:

$$\left|\infty V_{ref}\right| \langle ppm/°C \rangle = \frac{\{V_{ref(dev)} / V_{ref} \langle T_A = 25°C \rangle\} \times 10^6}{\Delta T_A}$$

   where ΔT_A is the rated operating free-air temperature range of the device.

   ∞V_{ref} can be positive or negative depending on whether minimum V_{ref} or maximum V_{ref}, respectively, occurs at the lower temperature.

4. The dynamic impedance is defined as: $|Z_{KA}| = \Delta V_{KA} / \Delta I_K$

   When the device is operating with two external resistors (see Figure 2), the total dynamic impedance of the circuit is given by:

$$\left|Z_{KA}\right| = \frac{\Delta V}{\Delta I} \approx \left|Z_{KA}\right| \times \left(1 + \frac{R_1}{R_2}\right)$$

DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
