MC74ACT158

Quad 2-Input Multiplexer

QUAD 2-INPUT
MULTIPLEXER

The MC74AC158/74ACT158 is a high-speed quad 2-input multiplexer. It selects four bits of data from two sources using the common Select and Enable inputs. The four buffered outputs present the selected data in the inverted form. The MC74AC158/74ACT158 can also be used as a function generator.

- Outputs Source/Sink 24 mA
- ′ACT158 Has TTL Compatible Inputs

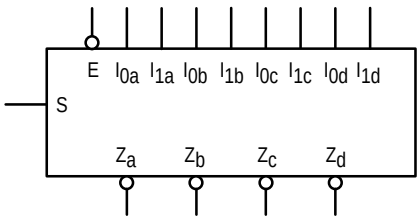
LOGIC SYMBOL



FUNCTIONAL DESCRIPTION

The MC74AC158/74ACT158 quad 2-input multiplexer selects four bits of data from two sources under the control of a common Select input (S) and presents the data in inverted form at the four outputs. The Enable input ($\overline{E}$) is active-LOW. When $\overline{E}$ is HIGH, all of the outputs ($\overline{Z}$) are forced HIGH regardless of all other inputs. The MC74AC158/74ACT158 is the logic implementation of a 4-pole, 2-position switch where the position of the switch is determined by the logic levels supplied to the Select input.

A common use of the MC74AC158/74ACT158 is the moving of data from two groups of registers to four common output busses. The particular register from which the data comes is determined by the state of the Select input. A less obvious use is as a function generator. The MC74AC158/74ACT158 can generate four functions of two variables with one variable common. This is useful for implementing gating functions.
