

Advance Information

MPC7450RXLDPNS/D
Rev 0, 11/2001

MPC7450 Part Number
Specification for the
XPC7450RXnnnLD Series

Motorola Part Numbers Affected:

XPC7450RX533LD
XPC7450RX600LD
XPC7450RX667LD

This document describes part-number-specific changes to recommended operating conditions and revised electrical specifications, as applicable, from those described in the general *MPC7450 RISC Microprocessor Hardware Specifications* (order # MPC7450EC/D).

Specifications provided in this document supersede those in the *MPC7450 RISC Microprocessor Hardware Specifications*, Rev. 4 or later, for the part numbers listed in Table A only. Specifications not addressed herein are unchanged. Because this document is frequently updated, refer to <http://www.motorola.com/semiconductors> or to your Motorola sales office for the latest version.

Note that headings and table numbers in this document are not consecutively numbered. They are intended to correspond to the heading or table affected in the general hardware specification.

Part numbers addressed in this document are listed in Table A.

Table A. Part Numbers Addressed by this Data Sheet

Motorola Part Number	Operating Conditions			Significant Differences from Hardware Specification
	CPU Frequency	V _{DD}	T _J (°C)	
XPC7450RX533LD	533 MHz	1.8 V ± 50 mV	0 to 105	V _{DD} constrained to 1.8 V nominal (1.6 V not supported), higher power consumption due to higher core voltage.
XPC7450RX600LD	600 MHz	1.8 V ± 50 mV	0 to 105	
XPC7450RX667LD	667 MHz	1.8 V ± 50 mV	0 to 105	

Note: The X prefix in a Motorola part number designates a “Pilot Production Prototype” as defined by Motorola SOP 3-13. These are from a limited production volume of prototypes manufactured, tested, and Q.A. inspected on a qualified technology to simulate normal production. These parts have only preliminary reliability and characterization data. Before pilot production prototypes may be shipped, written authorization from the customer must be on file in the applicable sales office acknowledging the qualification status and the fact that product changes may still occur while shipping pilot production prototypes.

Features

1.1 Features

This section summarizes changes to the features of the MPC7450 described in the *MPC7450 Hardware Specifications*.

- Power management
 - 1.8-V processor core

1.4 General Parameters

- Core power supply 1.8 V \pm 50 mV DC nominal

1.5.1 DC Electrical Characteristics

Table 4 provides the recommended operating conditions for the MPC7450 part numbers described herein.

Table 4. Recommended Operating Conditions

Characteristic	Symbol	Recommended Value	Unit
Core supply voltage	V _{DD}	1.8 V \pm 50 mV	V
PLL supply voltage	AV _{DD}	1.8 V \pm 50 mV	V

Note: These are the recommended and tested operating conditions. Proper device operation outside of these conditions is not guaranteed.

Table 7 provides the power consumption for the MPC7450 part numbers described herein.

Table 7. Power Consumption for MPC7450

	Processor (CPU) Frequency			Unit	Notes
	533 MHz	600 MHz	667 MHz		
Full-Power Mode					
Typical	11.6	13.0	14.5	W	1, 3
Maximum	15.2	17.5	19.0	W	1, 2
Doze Mode					
Typical	—	—	—	W	1, 2, 4
Nap Mode					
Typical	1.6	1.8	2.1	W	1, 2
Sleep Mode					
Typical	0.8	0.9	1.0	W	1, 2
Deep Sleep Mode (PLL Disabled)					
Typical	410	460	510	mW	1, 3

Notes:

1. These values apply for all valid processor bus and L3 bus ratios. The values do not include I/O supply power (OV_{DD} and GV_{DD}) or PLL supply power (AV_{DD}). OV_{DD} and GV_{DD} power is system dependent, but is typically <20% of V_{DD} power. Worst case power consumption for AV_{DD} < 3 mW.
2. Maximum power is measured at nominal V_{DD} while running an entirely cache-resident, contrived sequence of instructions which keep the execution units, with or without AltiVec, maximally busy.
3. Typical power is an average value measured at nominal V_{DD} in a system while running a typical code sequence.
4. Doze mode is not a user-definable state; it is an intermediate state between full-power and either nap or sleep mode. As a result, power consumption for this mode is not tested.

1.11 Ordering Information

1.11.1 Part Numbers Addressed by this Specification

Table 20 provides the ordering information for the MPC7450 part described in this document.

Table 20. Part Numbering Nomenclature

XPC	7450	RX	nnn	x	x
Product Code	Part Identifier	Package	Processor Frequency¹	Application Modifier	Revision Level
XPC ²	7450	RX = CBGA	533 600 667	L: 1.8 V ± 50 mV 0 to 105°C	D: 2.04; PVR = 8000 0200

Notes:

1. Processor core frequencies supported by parts addressed by this specification only. Parts addressed by other specifications may support other maximum core frequencies.
2. The X prefix in a Motorola part number designates a “Pilot Production Prototype” as defined by Motorola SOP 3-13. These are from a limited production volume of prototypes manufactured, tested, and Q.A. inspected on a qualified technology to simulate normal production. These parts have only preliminary reliability and characterization data. Before pilot production prototypes may be shipped, written authorization from the customer must be on file in the applicable sales office acknowledging the qualification status and the fact that product changes may still occur while shipping pilot production prototypes.

1.11.3 Part Marking

Parts are marked as the example shown in Figure 27.

Notes:

- MMMMMM is the 6-digit mask number.
- ATWLYYWWA is the traceability code.
- CCCCC is the country of assembly. This space is left blank if parts are assembled in the United States.
