Note 1: "Absolute Maximum Ratings" are those parameter values beyond which the life and operation of the device cannot be guaranteed. The stating herein of these maximums shall not be construed to imply that the device can or should be operated at or beyond these values. The table of "Electrical Characteristics" specifies acceptable device operating conditions.

Note 2: Current flow into device pins is defined as positive. Current flow out of device pins is defined as negative. All voltages are stated referenced to V_{EE} = 0 Volts.

Note 3: Typical values are stated for V_{CC} = +3.3V and T_A = +25°C.

Note 4: Specification is guaranteed by characterization.

Note 5: Maximum I_{CC} is measured at V_{CC} = +3.465V and T_A = +70 ^{\circ}C.

Note 6: Specification is guaranteed by characterization and verified by test.

Note 7: Output return loss is dependent on board design. The LMH0002 meets this specification on the SD002 evaluation board from 5MHz to 1.5GHz.

Device Operation

INPUT INTERFACING

The LMH0002 accepts either differential or single-ended input. The inputs are self-biased, allowing for simple AC or DC coupling. DC-coupled inputs must be kept within the specified common-mode range. SDI and \overline{SDI} are self-biased at approximately 2.1V with V_{CC} = 3.3V. *Figure 1* shows the differential input stage for SDI and \overline{SDI} .

Device Operation (Continued)

OUTPUT INTERFACING

The LMH0002 uses current mode outputs. Single-ended output levels are 800 mV_{P-P} into 75 Ω AC-coupled coaxial cable (with R_{REF} = 750 Ω). Output level is controlled by the value of the R_{REF} resistor connected between pin 4 and V_{CC}.

The R_{REF} resistor should be placed as close as possible to the R_{REF} pin. In addition, the copper in the plane layers below the R_{REF} network should be removed to minimize parasitic capacitance.

OUTPUT SLEW RATE CONTROL

The LMH0002 output rise and fall times are selectable for either SMPTE 259M or SMPTE 292M compliance via pin 6, SD/HD. For slower rise and fall times, or SMPTE 259M compliance, SD/HD is set high. For faster rise and fall times, or SMPTE 292M compliance, SD/HD is set low.

REPLACING THE GENNUM GS1528

The LMH0002 is form-fit-function compatible with the Gennum GS1528 and GS1528A.
