

Low on Resistance / Low Voltage 1A LDO

NO.EA-265-120308

OUTLINE

The RP132x Series are voltage-regulators with a built-in low ON-resistance transistor and output current is 1A capability. These ICs have two versions: fixed output voltage type and externally adjustable output voltage type. The minimum output voltage can be set from 1.4V. Otherwise, the load regulation of RP132x has much improved when compared with conventional regulators. It's Typ.5mV at $I_{OUT}=0.1mA$ to 1A.

Each of these ICs consists of a voltage reference unit, an error amplifier, a resistor net for setting output voltage, current limit circuits to prevent over-current and a thermal-shutdown circuit. A standby mode with ultra low supply current can be realized with the chip enable function. Additionally, E/F Version with delay pin for inrush current limit time setting are also available.

The packages for these ICs are DFN(PLP)1820-6, SOT-89-5, HSOP-6J and TO-252-5-P2. DFN(PLP)1820-6 is suitable for high density mounting of the ICs on boards. SOT-89-5, HSOP-6J and TO-252-5-P2 are supporting high wattage.

FEATURES

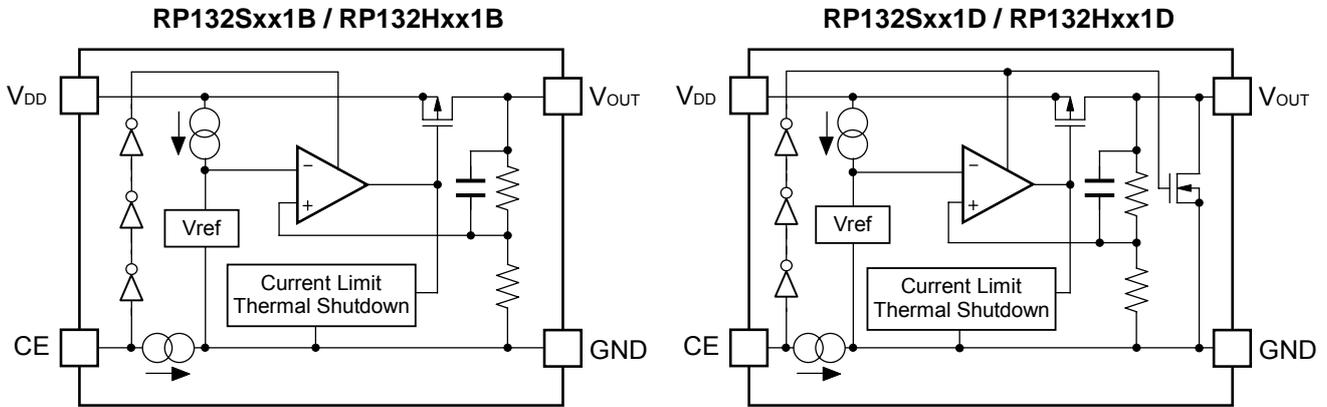

- Output Current Min. 1A
- Supply Current Typ. 65 μ A
- Standby Current Typ. 0.15 μ A
- Input Voltage Range 1.4V to 6.5V
- Output Voltage Range Fixed Output Voltage Type: 0.8V to 5.5V (0.1V steps)
Adjustable Output Voltage Type: 0.8V to 5.5V
(For other voltages, please refer to MARK INFORMATIONS.)
- Dropout Voltage..... Typ. 0.52V ($V_{OUT}=2.8V$, $I_{OUT}=1A$)
- Ripple Rejection Typ. 70dB ($f=1kHz$, $V_{OUT}=2.8V$)
- Output Voltage Accuracy $\pm 1.0\%$
- Output Voltage Temperature-Drift Coefficient Typ. $\pm 60ppm/^{\circ}C$
- Line Regulation Typ. 0.052%/V
- Load Regulation Typ. 3mV at $I_{OUT}=300mA$, Typ. 5mV at $I_{OUT}=1A$
- Packages DFN(PLP)1820-6, SOT-89-5, HSOP-6J, TO-252-5-P2
- Inrush Current Limit Circuit Typ. 500mA
B/D version: Inrush current limit time is 500 μ s.
E/F version: Inrush current limit time is adjustable.
- Fold-Back Protection Circuit Typ. 250mA (Current at short mode)
- Thermal Shutdown Circuit Thermal Shutdown Temperature: Typ. 165 $^{\circ}C$
Released Temperature: Typ. 95 $^{\circ}C$
- Auto Discharge Function D, F version
- Ceramic capacitors are recommended to be used with this IC 2.2 μ F or more ($V_{OUT} \leq 3.6V$)
4.7 μ F or more ($V_{OUT} > 3.6V$)

APPLICATIONS

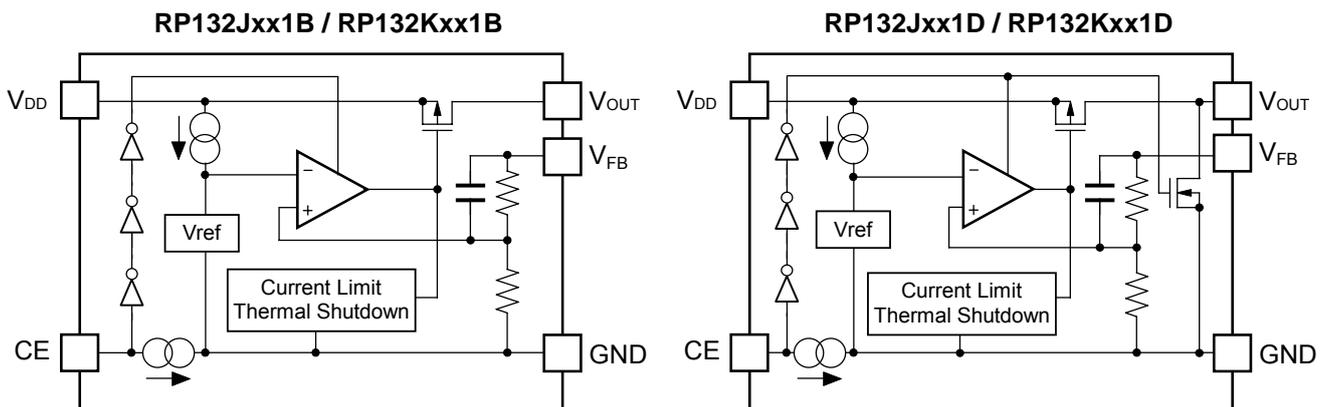

- Power source for battery-powered equipment.
- Power source for portable communication equipment
- Power source for electrical appliances such as cameras, VCRs and camcorders.
- Power source for home appliances and Notebook PC.

SELECTION GUIDE

The output voltage, the auto discharge function, and the package type for the ICs can be selected at the user's request.

Product Name	Package	Quantity per Reel	Pb Free	Halogen Free
RP132Kxx1*-TR	DFN(PLP)1820-6	5,000 pcs	Yes	Yes
RP132Hxx1#-T1-FE	SOT-89-5	1,000 pcs	Yes	Yes
RP132Sxx1*-E2-FE	HSOP-6J	1,000 pcs	Yes	Yes
RP132Jxx1#-T1-FE	TO-252-5-P2	3,000 pcs	Yes	Yes

xx: The output voltage can be designated in the range from 0.8V(08) to 5.5V(55) in 0.1V steps.
(For other voltages, please refer to MARK INFORMATION.)
RP132S001E/F doesn't exist.

*: The combination of the auto discharge function and delay pin (for setting inrush current limit time) are follows.

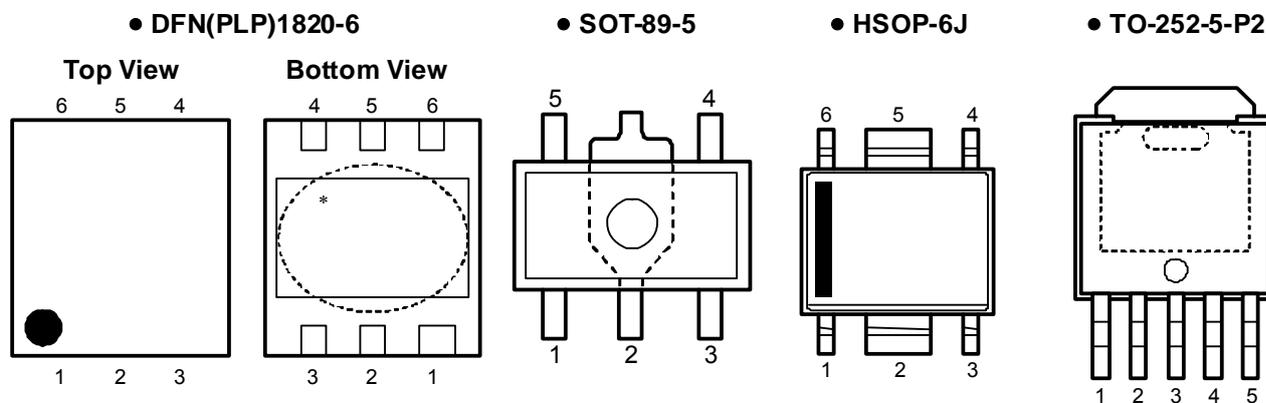

- (B) without auto discharge function
- (D) with auto discharge function
- (E) without auto discharge function, with delay pin (for setting inrush current limit time)
- (F) with auto discharge function and delay pin (for setting inrush current limit time)

#: The auto discharge function at off state are options as follows.

- (B) without auto discharge function at off state
- (D) with auto discharge function at off state

Auto-discharge function quickly lowers the output voltage to 0V, when the chip enable signal is switched from the active mode to the standby mode, by releasing the electrical charge accumulated in the external capacitor.

RECOMMENDED OPERATING CONDITIONS (ELECTRICAL CHARACTERISTICS)

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if when they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

TECHNICAL NOTES

When using these ICs, consider the following points:

Phase Compensation

In these ICs, phase compensation is made for securing stable operation even if the load current is varied. For this purpose, use a capacitor C2 with good frequency characteristics and ESR (Equivalent Series Resistance).

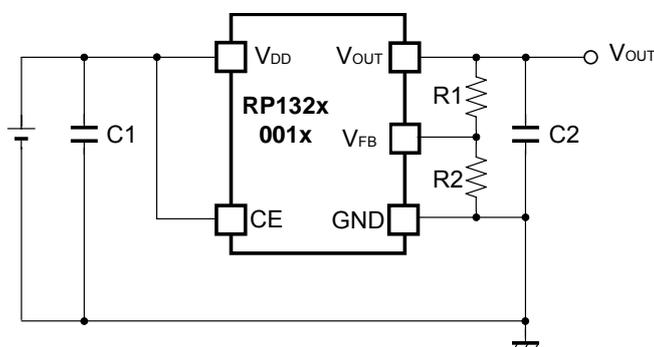

If a tantalum capacitor is used, and its ESR of C2 is large, the loop oscillation may result. Because of this, select C2 carefully considering its frequency characteristics.

PCB Layout

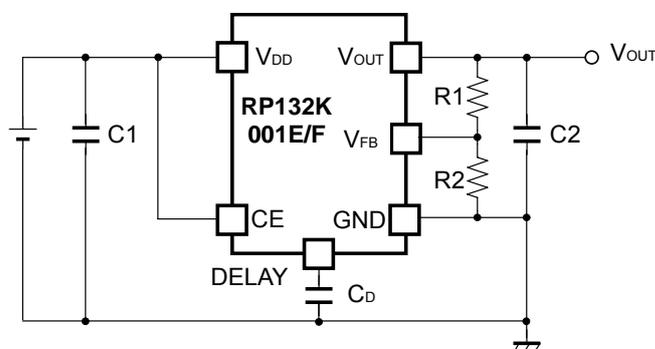

Make V_{DD} and GND lines sufficient. If their impedance is high, noise pickup or unstable operation may result. Connect a capacitor C1 between V_{DD} and GND pin with a capacitance value as "Recommendation value of the external capacitors" above or more, and as close as possible to the pins.

Set external components, especially the output capacitor C2, as close as possible to the ICs, and make wiring as short as possible.

	C2	Kyocera 4.7 μ F (size:1608) [CM105X5R475M06AB]

Phase Compensation

Similar to the Fixed Output Voltage Type, Phase compensation is made for the Adjustable Output Voltage Type for securing stable operation even if the load current is varied. For this purpose, use a 4.7 μ F or more capacitor C2 between V_{OUT} pin and GND pin, and as close as possible to the pins.

PCB Layout

Make V_{DD} and GND lines sufficient. If their impedance is high, noise pickup or unstable operation may result. Connect a capacitor C1 with a capacitance value as much as 2.2 μ F or more between V_{DD} and GND pin, and as close as possible to the pins.

When using the Adjustable Output Voltage Type, the transient response could be affected by the external resistors. Evaluate the circuit taking the actual conditions of use into account.

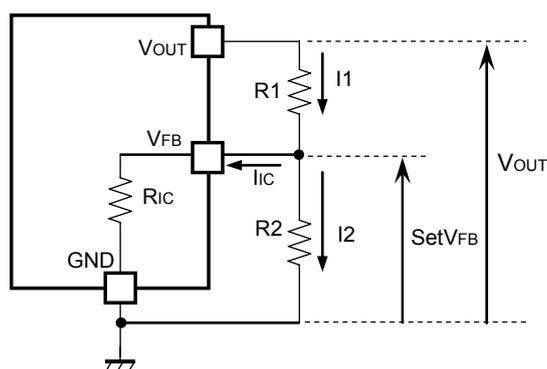

Adjustable Output Voltage Type Settings

• Output Voltage Setting Method

RP132x081x can be adjusted the output voltage up to 5.5V by using the external divider resistors.

Also, please use 16kΩ or less for R2 resistor.

If the V_{FB} voltage is described as setV_{FB}, the output voltage can be set by using the following equations
SetV_{FB} is equal to 0.8V. The V_{OUT} pin of RP132x081x should be connected to the V_{FB} pin.

$$I_1 = I_{IC} + I_2 \dots\dots\dots (1)$$

$$I_2 = \text{set}V_{FB} / R_2 \dots\dots\dots (2)$$

Thus,

$$I_1 = I_{IC} + \text{set}V_{FB} / R_2 \dots\dots\dots (3)$$

Therefore,

$$V_{OUT} = \text{set}V_{FB} \times R_1 \times I_1 \dots\dots\dots (4)$$

Put Equation (3) into Equation (4), then

$$\begin{aligned} V_{OUT} &= \text{set}V_{FB} + R_1(I_{IC} + \text{set}V_{FB} / R_2) \\ &= \text{set}V_{FB} \times (1 + R_1 / R_2) + R_1 \times I_{IC} \dots\dots\dots (5) \end{aligned}$$

In Equation (5), R₁ × I_{IC} is the error-causing factor in V_{OUT}.

As for I_{IC},

$$I_{IC} = \text{set}V_{FB} / R_{IC} \dots\dots\dots (6)$$

Therefore, the error-causing factor R₁ × I_{IC} can be described as follows.

$$\begin{aligned} R_1 \times I_{IC} &= R_1 \times \text{set}V_{FB} / R_{IC} \\ &= \text{set}V_{FB} \times R_1 / R_{IC} \dots\dots\dots (7) \end{aligned}$$

For better accuracy, choosing R₁ (<<R_{IC}) reduces this error.

Without the error-causing factor R₁ × I_{IC}, the output voltage can be calculated by the following equation

$$V_{OUT} = \text{set}V_{FB} \times ((R_1 + R_2) / R_2) \dots\dots\dots (8)$$

R_{IC} of RP132x is approximately Typ.1.3MΩ (T_{opt}=25°C, this value is guaranteed by design.).

The value could be affected by the temperature, therefore evaluate the circuit taking the actual conditions of use into account.

Inrush Current Limit Time Settings

The RP132xSeries include the circuit which can limit the inrush current at start-up to 500mA or less.

The current limit time of B/D version is fixed internally as approximately Typ.500 μ s.

On the other hand, the current limit times of E/F versions are adjustable by controlling the DELAY pin value, which is the capacitance value connected between DLEAY pin and GND pin.

The relation between Inrush Current Limit Time (t_D [s]) and the DELAY pin capacitance (C_D [F]) can be described in the following equation.

$$t_D=(C_D+70 \times 10^{-12}) \times 0.525 \times 10^6$$

When not using C_D on E/F versions, DELAY pin should be open.

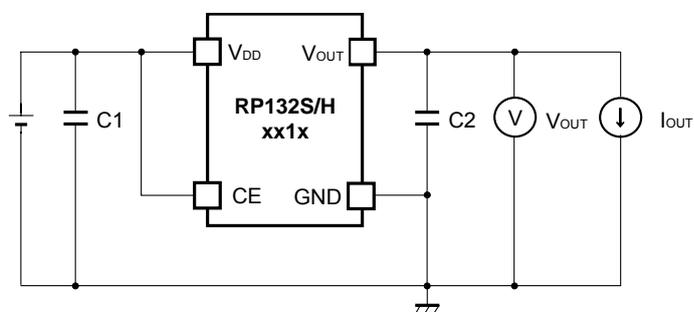

In this case, $C_D=0$ is applied to the above equation and as a result, 37 μ s can be obtained.

That means, when using C_D on E/F versions, the inrush current limit time will be more than 37 μ s.

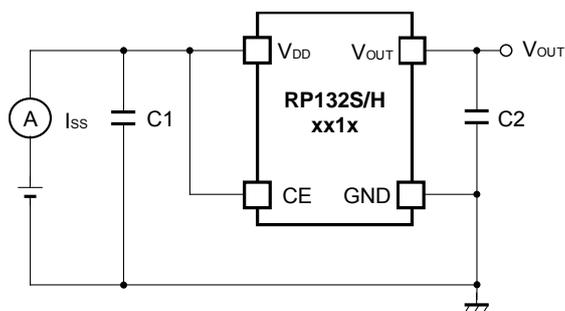

Please note that during the inrush current limit time, the load current cannot be more than the limited current.

ESR vs. Output Current

When using these ICs, consider the following points:

The relations between I_{OUT} (Output Current) and ESR of an output capacitor are shown below.

The conditions when the white noise level is under $40\mu V$ (Avg.) are marked as the hatched area in the graph.

Measurement conditions

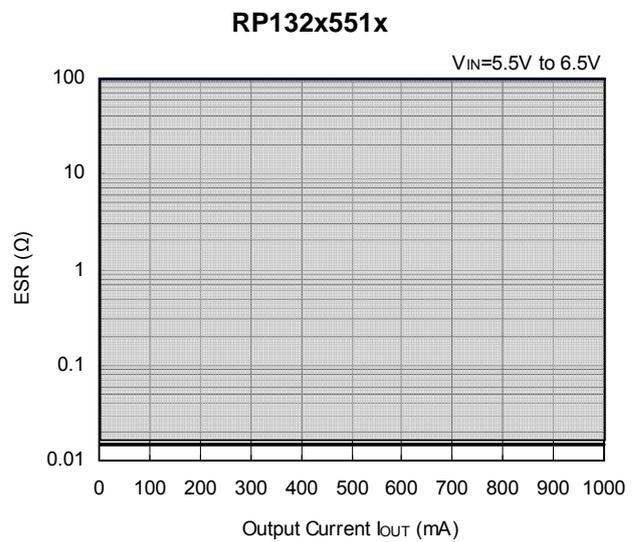

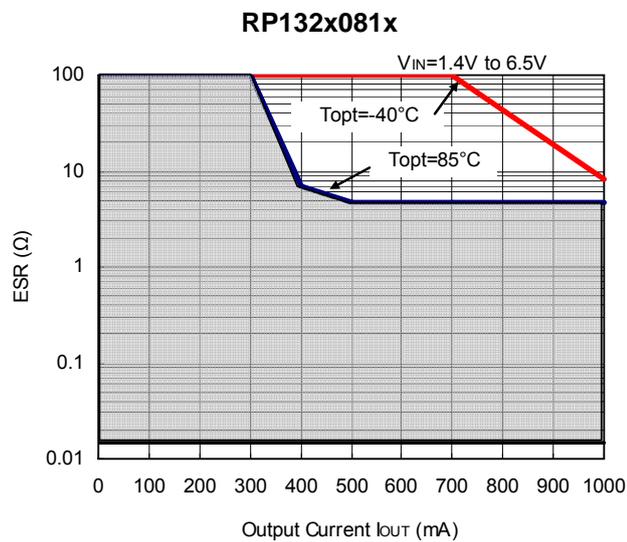

Frequency Band : 10Hz to 2MHz

Temperature : $-40^{\circ}C$ to $85^{\circ}C$

Hatched Area : Noise level is under $40\mu V_{ms}$ (Avg.)

C_{IN} : $2.2\mu F$ Kyocera (CM05X5R225M06A)

C_{OUT} : $4.7\mu F$ Kyocera (CM105X5R475M06AB)

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to Ricoh sales representatives for the latest information thereon.
2. The materials in this document may not be copied or otherwise reproduced in whole or in part without prior written consent of Ricoh.
3. Please be sure to take any necessary formalities under relevant laws or regulations before exporting or otherwise taking out of your country the products or the technical information described herein.
4. The technical information described in this document shows typical characteristics of and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under Ricoh's or any third party's intellectual property rights or any other rights.
5. The products listed in this document are intended and designed for use as general electronic components in standard applications (office equipment, telecommunication equipment, measuring instruments, consumer electronic products, amusement equipment etc.). Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or misoperation of the product could result in human injury or death (aircraft, spacevehicle, nuclear reactor control system, traffic control system, automotive and transportation equipment, combustion equipment, safety devices, life support system etc.) should first contact us.
6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, firecontainment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. Anti-radiation design is not implemented in the products described in this document.
8. Please contact Ricoh sales representatives should you have any questions or comments concerning the products or the technical information.

RICOH COMPANY., LTD. Electronic Devices Company

■ Ricoh presented with the Japan Management Quality Award for 1999.
Ricoh continually strives to promote customer satisfaction, and shares the achievements of its management quality improvement program with people and society.

■ Ricoh awarded ISO 14001 certification.
The Ricoh Group was awarded ISO 14001 certification, which is an international standard for environmental management systems, at both its domestic and overseas production facilities. Our current aim is to obtain ISO 14001 certification for all of our business offices.
