Safety information

Connect the power cord to a properly grounded electrical outlet that is near the product and easily accessible.

Do not place or use this product near water or wet locations.

Use only the power supply and power cord provided with this product or the manufacturer's authorized replacements.

Use only the telecommunications (RJ-11) cord provided with this product or a 26 AWG or larger replacement when connecting this product to the public switched telephone network.

 **CAUTION—SHOCK HAZARD:** Make sure that all external connections (such as Ethernet and telephone system connections) are properly installed in their marked plug-in ports.

This product is designed, tested, and approved to meet strict global safety standards with the use of specific manufacturer's components. The safety features of some parts may not always be obvious. The manufacturer is not responsible for the use of other replacement parts.

 **CAUTION—POTENTIAL INJURY:** Do not cut, twist, bind, crush, or place heavy objects on the power cord. Do not subject the power cord to abrasion or stress. Do not pinch the power cord between objects such as furniture and walls. If any of these things happen, a risk of fire or electrical shock results. Inspect the power cord regularly for signs of such problems. Remove the power cord from the electrical outlet before inspecting it.

Refer service or repairs, other than those described in the user documentation, to a professional service person.

 **CAUTION—SHOCK HAZARD:** To avoid the risk of electric shock when cleaning the exterior of the printer, unplug the power cord from the wall outlet and disconnect all cables from the printer before proceeding.

 **CAUTION—SHOCK HAZARD:** Do not use the fax feature during a lightning storm. Do not set up this product or make any electrical or cabling connections, such as the fax feature, power cord, or telephone, during a lightning storm.

 **CAUTION—POTENTIAL INJURY:** The area behind the duplex cover has protruding ribs as part of the paper path. To avoid injury, use caution when accessing this area for clearing a paper jam.

SAVE THESE INSTRUCTIONS.

About your printer

Thank you for choosing this printer!

We've worked hard to make sure it will meet your needs.

To start using your new printer right away, use the setup materials that came with the printer, and then skim the *User's Guide* to learn how to perform basic tasks. To get the most out of your printer, read the *User's Guide* carefully, and make sure you check the latest updates on our Web site.

We're committed to delivering performance and value with our printers, and we want to make sure you're satisfied. If you do encounter any problems along the way, one of our knowledgeable support representatives will be delighted to help you get back on track fast. And if you find something we could do better, please let us know. After all, you are the reason we do what we do, and your suggestions help us do it better.

Minimizing your printer's environmental impact

We are committed to protecting the environment and are continually improving our printers to reduce their environmental impact. By selecting certain printer settings or tasks, you may be able to reduce your printer's environmental impact even further.

Conserving energy

- **Activate Eco-Mode.** This feature sets the screen brightness to low and sets the printer to change to Power Saver mode after the printer is left idle for 10 minutes.
- **Select the lowest Power Saver timeout.** The Power Saver feature puts the printer in a minimum-power standby mode after the printer has been idle for a set amount of time (the Power Saver timeout).
- **Share your printer.** Wireless/network printers allow you to share a single printer among multiple computers, thus conserving energy and other resources.

Conserving paper

- **Activate Eco-Mode.** On selected printer models, this feature sets the printer to automatically print on both sides of the paper (duplex) for copy and fax jobs and for printing in Windows.
- **Print more than one page image on one side of the paper.** The "Pages per sheet" feature allows you to print multiple pages on one sheet. You can print up to 8 page images on one side of a sheet of paper.
- **Print on both sides of the paper.** Duplexing lets you print on both sides of the paper manually or automatically (depending on your printer model).
- **Preview print jobs before printing.** Use the preview features found in the Print Preview dialog or the printer display (depending on your printer model).
- **Scan and save.** To avoid printing multiple copies, you can scan documents or photographs and save them to a computer program, application, or flash drive for presentation.
- **Use recycled paper.**

Conserving ink

- **Use Quick Print or Draft Mode.** These modes can be used to print documents using less ink than normal and are ideal for printing documents that are mostly text.
- **Use High Yield cartridges.** Inks in High-Yield cartridges allow you to print more pages with fewer cartridges.
- **Clean the printhead.** Before replacing and recycling your ink cartridges, try using the “Clean Printhead” and “Deep Clean Printhead” features. These features clean the printhead nozzles to improve the quality of your prints.

Recycling

- **Recycle the product packaging.**
- **Recycle your old printer instead of throwing it away.**
- **Recycle paper from discarded print jobs.**
- **Use recycled paper.**

Finding information about the printer

Understanding the parts of the printer

	Use the	To
1	Scanner lid	Access the scanner glass.
2	Scanner glass	Scan, copy, or fax photos and documents.
3	Automatic Document Feeder (ADF)	Scan, copy, or fax multiple-page letter-, legal-, and A4-size documents.
4	ADF tray	Load original documents in the ADF. Recommended for scanning, copying, or faxing multiple-page documents. Note: Do not load postcards, photos, small items, or thin media (such as magazine clippings) into the ADF. Place these items on the scanner glass.
5	ADF paper guide	Keep paper straight when feeding into the ADF.
6	ADF output tray	Hold documents as they exit from the ADF.
7	Wi-Fi indicator	Check wireless status.
8	Memory card slot	Insert a memory card.
9	PictBridge and USB port	Connect a PictBridge-enabled digital camera, a USB Bluetooth adapter, or a flash drive to the printer.
10	Printer control panel	Operate the printer.
11	Paper tray	Load paper.
12	Paper exit tray	Hold paper as it exits.

	Use the	To
1	Scanner unit	- Access the ink cartridges and printhead. - Remove paper jams.
2	Printhead	Install, replace, or remove the ink cartridges.
3	Ethernet port	Connect the printer to a computer, a local network, an external DSL, or a cable modem.
4	USB port	Connect the printer to a computer using a USB cable. Warning—Potential Damage: Do not touch the USB port except when plugging in or removing a USB cable or installation cable.
5	LINE Port 	Connect the printer to an active telephone line (through a standard wall jack, DSL filter, or VoIP adapter) to send and receive faxes.
6	EXT Port 	Connect additional devices (telephone or answering machine) to the printer and the telephone line. Use this port if you do not have a dedicated fax line for the printer, and if this connection method is supported in your country or region. Note: Remove the plug to access the port.
7	Security slot	Install an anti-theft cable on your printer.
8	Power supply with port	Connect the printer to a power source using the power cord.
9	Duplex unit	- Print on both sides of a sheet of paper. - Remove paper jams.

Ordering and replacing supplies

Ordering ink cartridges

Page yields available at www.dell.com/supplies. For best results, use only Dell ink cartridges.

Item	Licensed cartridge ¹	Regular cartridge
Black cartridge	Series 21	Series 21R
Black cartridge, high yield ²	Series 24	Series 24R
Color cartridge	Series 21	Series 21R
Color cartridge, high yield ²	Series 24	Series 24R

¹ Licensed for a single use only. After use, return this cartridge to Dell for remanufacturing, refilling, or recycling. To learn more about recycling Dell products, visit www.dell.com/recycling.

² Available only on the Dell Web site at www.dell.com/supplies.

Replacing ink cartridges

Make sure you have a new ink cartridge or cartridges before you begin. You must install new cartridges immediately after removing the old ones or the ink remaining in the printhead nozzles may dry out.

- 1 Turn on your printer.
- 2 Open the printer.

Note: The printhead moves to the cartridge installation position.

- 3 Press the release tab, and then remove the used ink cartridge or cartridges.

- 4 Use two hands to install each cartridge.

Note: Install the new ink cartridges immediately after removing the protective cap to avoid exposing the ink to air.

- 5 Close the printer.

Recycling Dell products

To return Dell products to Dell for recycling:

- 1 Click  or **Start**.
- 2 Click **All Programs** or **Programs**, and then select the printer program folder from the list.
- 3 Select **Printer Home**.
- 4 Choose your printer from the printer drop-down list.
- 5 From the Maintenance tab, click **Order supplies**.
- 6 Click .
- 7 Follow the instructions on the computer screen.

Using the printer control panel buttons and menus

Using the printer control panel

The following diagrams explain the sections of the printer control panel:

	Use	To
1	Power 	- Turn the printer on and off. - Switch to Power Saver mode. Note: When the printer is on, press  to switch to Power Saver mode. Press and hold  for three seconds to turn off the printer.
2	Copy 	Access the copy menu and make copies.
3	Scan 	Access the scan menu and scan documents.
4	Fax 	Access the fax menu and send faxes.
5	Photo 	Access the photo menu and print photos.
6	Back 	- Return to the previous screen. - Exit from one menu level to a higher one.

	Use	To
7	Select 	- Select menu options. - Save settings. - Feed or eject paper. Press and hold the button for 3 seconds to feed or eject paper from the printer.
8	Arrow buttons	Navigate to menu or submenu items that appear on the display.
9	Display Note: The display is turned off in Power Saver mode.	View: - Printer status - Messages - Menus
10	Setup 	Access the setup menu and change printer settings. Note: The Copy, Scan, Fax, and Photo button lights are off when this button is selected.

	Use	To
1	Address Book	Access fax numbers from a saved list of numbers.
2	Redial/Pause	In Fax mode: - Insert a three-second pause in a fax number to wait for an outside line or get through an automated answering system. Enter a pause only when you have already begun entering the number. - Display the last number dialed. Press the left or right arrow button to view the last five numbers dialed.
3	Dialtone	Dial the telephone number manually using the keypad before sending the fax.
4	Color/Black	Switch to color mode or black-and-white mode.
5	Start 	Start a job, depending on which mode is selected.

	Use	To
6	2-Sided/Eco Mode	Activate 2-Sided to: • Print on both sides of the paper (duplex). Activate Eco-Mode to: • Print on both sides of the paper (duplex). • Change to Power Saver mode after the printer is left idle for ten minutes. • Set screen brightness to low.
7	Cancel 	• Cancel a print, copy, scan, or fax job in progress. • Exit from a menu level of the Copy, Scan, Fax, Photo, or File Print menu to the top level of a menu. • Exit from a menu level of the Setup menu to the top level of the previous mode. • Clear current settings or error messages, and return to default settings.
8	Keypad	In Copy mode or Photo mode: enter the number of copies or prints you want to make. In Fax mode: • Enter fax numbers. • Navigate an automated answering system. • Select letters when creating a Speed Dial list. • Type numbers to enter or edit the date and time shown on the display.

Changing the Power Saver timeout

The Power Saver timeout is the time it takes for the printer to switch to Power Saver mode when the printer is left idle. The Power Saver feature optimizes energy efficiency by reducing the printer power consumption (as much as 28 percent on some printer models) compared to the default printer settings. To save the most energy, select the lowest Power Saver timeout.

- 1 From the printer control panel, press .
- 2 Press the up or down arrow button to scroll to **Device Setup**, and then press .
- 3 Press the up or down arrow button to scroll to **Power Saver**, and then press .
- 4 Press the up or down arrow button to select a Power Saver timeout, and then press .

Saving paper and energy with Eco-Mode

The Eco-Mode feature significantly cuts paper usage, reduces paper waste, optimizes energy efficiency, and saves money.

Note: If you are using Eco-Mode, then the Eco-Mode settings override any changes you may make to individual settings that are part of Eco-Mode.

When Eco-Mode is enabled, the printer automatically switches to the following settings:

- The printer display is dimmed.
- The printer changes to Power Saver mode after ten minutes.
- The printer prints on both sides of the paper (duplex) for copy and fax jobs, and for printing in Windows (selected models only).

To enable Eco-Mode, press the **2-Sided/Eco-Mode** button until the light near “Eco-Mode” comes on.

Changing temporary settings into new default settings

The following menus revert to default settings after two minutes of inactivity or after the printer is turned off:

Copy menu	• Copies • Quality • Resize • Lighter/Darker • Collate • Photo Reprint • Pages per Sheet • Original Size • Copies per Sheet • Content Type
Scan menu	• Quality • Original Size
Fax menu (selected models only)	• Lighter/Darker • Quality
Photo menu	The following Photo options will not time out after two minutes of inactivity or after you turn off the printer, but they will return to the factory default settings when a memory card or flash drive is removed. • Layout • Colorized Effect • Photo Size • Quality

To change the temporary settings into new default settings

- 1 From the printer control panel, press .
- 2 Press the up or down arrow button to scroll to **Defaults**, and then press **OK**.
- 3 Press the up or down arrow button to scroll to **Set Defaults**, and then press **OK**.
Use Current appears on the display.
- 4 Press **OK** again to select **Use Current**.

To disable the settings timeout feature

You can disable the settings timeout feature if you do not want the printer to revert to the default settings after two minutes of inactivity or after the printer is turned off.

- 1 From the printer control panel, press .
- 2 Press the up or down arrow button to scroll to **Device Setup**, and then press **OK**.
- 3 Press the up or down arrow button to scroll to **Clear Settings Timeout**, and then press **OK**.
- 4 Press the up or down arrow button to scroll to **Never**, and then press **OK**.

Resetting to factory settings

Resetting to factory default settings will delete all the printer settings you have previously selected.

Using the printer control panel menus

- 1 From the printer control panel, press .
- 2 Press the up or down arrow button to scroll to **Defaults**, and then press **OK**.
- 3 Press the up or down arrow button to scroll to **Set Defaults**, and then press **OK**.
- 4 Press the up or down arrow button to scroll to **Use Factory**, and then press **OK**.
- 5 When prompted to set the initial settings of your printer, make your selections using the printer control panel buttons.
Initial Setup Complete appears on the display.

Using a button combination (if you cannot read the current language)

- 1 Turn off the printer.
Note: If you have set the Power Saver timeout in the Setup menu, then press and hold  for three seconds to turn off the printer.
- 2 From the printer control panel, press and hold  and , and then press and release  to turn the printer on.
Note: Do not release  and  until **Language** appears on the display, indicating that the printer has been reset.
- 3 When prompted to set the initial settings of your printer, make your selections using the printer control panel buttons.
Initial Setup Complete appears on the display.

Using the printer software

Minimum system requirements

The printer software requires up to 500 MB of free disk space.

Supported operating systems

- Microsoft Windows 7 (Web only)¹
- Microsoft Windows Vista (SP1)
- Microsoft Windows XP (SP3)
- Microsoft Windows 2000 (SP4 or greater)
- Linux Ubuntu 8.04 LTS and 8.10 (Web only)¹
- Linux OpenSUSE 11.0 and 11.1 (Web only)¹
- Linux Fedora 10 (Web only)¹

¹ The printer driver for this operating system is available only at support.dell.com.

Using the Windows printer software

Software installed during printer installation

When you set up the printer using the installation software CD, all the necessary software was installed. You may have chosen to install some additional programs. The following table provides an overview of various software programs and what they can help you do.

If you did not install these additional programs during initial installation, then reinsert the installation software CD, run the installation software, and then select **Install Additional Software** from the Software Already Installed screen.

Printer software

Use the	To
Dell Printer Home (referred to as Printer Home)	• Launch applications or programs. • Access the Fax Solutions software. • Scan or e-mail a photo or document. • Edit scanned documents. • Scan documents to PDF. • Adjust settings for the printer. • Order supplies. • Maintain ink cartridges. • Print a test page. • Register the printer. • Contact technical support.

Use the	To
Dell Fast Pics (referred to as Fast Pics)	Manage, edit, transfer, and print photos and documents.
Adobe™ Photo Album Starter Edition	View, manage, and edit photos.
Dell Toolbar (referred to as Toolbar)	Print, scan, or convert local files from Windows.
Dell Ink Management System	Order ink.
Dell Fax Solutions (referred to as Fax Solutions)	• Send a fax. • Receive a fax in three-in-one printers. • Add, edit, or delete contacts in the built-in phone book. • Access the Dell Fax Setup Utility. Use the Fax Setup Utility to set the Speed Dial and Group Dial numbers, set Ringing and Answering, and print fax history and status reports.
Abbyy Sprint OCR	Scan a document and produce text that you can edit with a word-processing program.
Dell Wireless Setup Utility (referred to as Wireless Setup Utility)	• Set up the wireless printer on a wireless network. • Change the wireless settings of the printer. Note: This program is installed automatically with the printer software if the printer has wireless capability.
Dell Service Center (referred to as Service Center)	• Troubleshoot the printer. • Access the printer maintenance functions. • Contact technical support. Notes: • This program is installed automatically with the printer software. • You may be prompted to install this program from the Web, depending on your printer model.
Printing Preferences	When you select File → Print with a document open and then click Properties, a Printing Preferences dialog appears. The dialog lets you select options for the print job, such as the following: • Select the number of copies to print. • Print two-sided copies. • Select the paper type. • Add a watermark. • Enhance images. • Save settings. Note: Printing Preferences is installed automatically with the printer software.

Note: Your printer may not come with some of these programs or some of the functions of these programs, depending on the features of the printer that you purchased.

Updating the printer software (Windows only)

Checking for software updates

- 1 Click  or **Start**.
- 2 Click **All Programs** or **Programs**, and then select the printer program folder from the list.
- 3 Select **Printer Home**.
- 4 Choose your printer from the printer drop-down list.
- 5 From the Support tab, select **Check for updates**.
- 6 Follow the instructions on the computer screen.

Reinstalling the printer software

When you set up the printer using the installation software CD, all the necessary software was installed. If you encountered problems while installing, or if your printer does not appear in the Printers folder or as a printer option when you send a print job, then try removing and reinstalling the printer.

Uninstalling the printer software

- 1 Click  or **Start**.
- 2 Click **All Programs** or **Programs**, and then select the printer program folder from the list.
- 3 Select the uninstall option.
- 4 Follow the instructions on the computer screen to remove the software.
- 5 Once the uninstall process is complete, restart your computer.

Installing the printer software

Note: If you installed the printer software on this computer before but need to reinstall the software, then uninstall the current software first.

- 1 Close all open software programs.
- 2 Insert the installation software CD.
If the Welcome screen does not appear after a minute, then launch the CD manually:
 - a Click , or click **Start** and then click **Run**.
 - b In the Start Search or Run box, type **D:\setup.exe**, where **D** is the letter of your CD or DVD drive.
- 3 Follow the instructions on the Welcome screen.

Using the World Wide Web

Updated printer software may be available at **support.dell.com**.

Loading paper and original documents

Loading the paper tray

Make sure:

- You use paper designed for inkjet printers.
- The paper is not used or damaged.
- If you are using specialty paper, you follow the instructions that came with it.

Note: To avoid jams, make sure the paper does not buckle when you adjust the paper guides.

- 1 Pull tray completely out of the printer.

- 2 Move the paper guides to the sides of tray.

- 3** If you are loading A4- or legal-size paper, then squeeze the tab and pull to extend the tray.

Note: When you pull the extension out, the first stop accommodates A4-size paper. When the extension is fully out, it accommodates legal-size paper.

- 4** Load the paper.

5 Adjust the paper guides to rest gently against the left, right, and bottom edges of the paper.

6 Insert the tray.

Note: If you extended the tray to accommodate A4- or legal-size paper, then the tray sticks out from the front of the printer when inserted.

7 Flip up the paper stop to catch the paper as it exits.

Note: If you loaded A4- or legal-size paper, then extend the paper stop. Use both extenders for A4 and legal.

Loading envelopes or photo paper

- 1 Pull tray completely out of the printer.

- 2 Move the paper guides to the sides of tray.

- 3** Use the envelope icon and the photo paper outline on the bottom of the tray to help you position envelopes or photo paper.

Note: Do not mix paper types in the tray. You can load either envelopes or photo paper, but not both.

- 4** Load envelopes or photo paper.

Note: Load envelopes or photo paper with the printable side facedown. (If you are not sure which side is the printable side, then see the instructions that came with the envelopes or photo paper.)

5 Adjust the paper guides to rest gently against the left, right, and bottom edges of the envelopes or photo paper.

6 Insert the tray.

7 Flip up the paper stop to catch the envelopes or photos as they exit.

Note: For best results, allow photos to dry at least 24 hours before stacking, displaying, or storing.

Loading various paper types

Load up to	Make sure
150 sheets of plain paper	- The paper is designed for use with inkjet printers. - The paper guides rest against the left, right, and bottom edges of the paper.
100 sheets of coated paper 25 sheets of photo paper 25 sheets of glossy paper	- The glossy or printable side of the paper faces down. (If you are not sure which side is the printable side, then see the instructions that came with the paper.) - The paper guides rest against the left, right, and bottom edges of the paper. Notes: - For best results, allow photos to dry at least 24 hours before stacking, displaying, or storing. - For best results, load more photo paper than needed but do not exceed the maximum amount for your paper type.
10 envelopes	 - The envelopes are designed for use with inkjet printers. - The print side of the envelopes faces down with the flap to the left as shown. - You load the envelopes in the center of the tray as indicated by the icon. Load them all the way to the back of the tray. - You print the envelopes in landscape orientation. - The paper guides rest against the left, right, and bottom edges of the envelopes. - You select the correct envelope size. If the exact envelope size is not listed, select the next larger size. Set the left and right margins so that the envelope text will be correctly positioned on the envelope. Warning—Potential Damage: Do not use envelopes that have metal clasps, string ties, or metal folding bars. Notes: - Do not load envelopes with holes, perforations, cutouts, or deep embossing. - Do not use envelopes that have exposed flap adhesive.

Load up to	Make sure
25 sheets of labels	- You use full label sheets. Partial sheets (with areas exposed by missing labels) may cause labels to peel off during printing, resulting in a paper jam. - You load letter- or A4-size label sheets. - The print side of the labels faces down. - The top of the labels feeds into the printer first. - The paper guides rest against the left, right, and bottom edges of the label sheets.
50 transparencies	- The rough side of the transparencies faces down. - You load letter- or A4-size transparencies. - You remove any paper backing sheets from the transparencies before loading. - If the transparencies have a removable strip, each strip faces down. - The paper guides rest against the left, right, and bottom edges of the transparencies. Note: Transparencies require more drying time. Remove each transparency as it exits, and allow it to dry to avoid ink smudging.
10 iron-on transfers	- You follow the loading instructions that came with the iron-on transfers. - The print side of the transfers faces down. - The paper guides rest against the edges of the transfers. Note: For best results, load transfers one at a time.
25 index cards, photo papers, or postcards	- The thickness does not exceed 0.025 inches (0.635 mm). - The print side of the photo paper faces down. - You load the photo paper in the center of the tray, as indicated by the 4 x 6 photo paper outline. - The paper guides rest against the left, right, and bottom edges of the paper.  Note: For best results, allow photos to dry at least 24 hours before stacking, displaying, or storing

Load up to	Make sure
20 sheets of banner paper	• The print side of the banner faces down. • The leading edge of the banner paper feeds into the printer first. • If your printer has more than one paper tray, then load banner paper in Tray 1. To load banner paper: 1 Pull the tray completely out of the printer. 2 Remove all paper from the tray. 3 Move the paper guides as though you were loading legal-size paper. 4 Squeeze the lever and pull to extend the tray to legal size. 5 Tear off only the number of pages needed to print the banner. 6 Set the stack of pages in front of the printer. 7 Slide the first sheet from the stack of pages over the tray handle and all the way into the back of tray. 

Saving paper default settings

You can set the default paper size, paper type, and photo print size for the documents and photos that you print.

Note: These default settings apply only to print, copy, and scan jobs that you initiate from the printer.

- 1 From the printer control panel, press .
- 2 Choose the default settings:
 - If you want to set the default paper size:
 - a Press **OK** to select **Paper Setup**.
 - b Press the up or down arrow button to scroll to **Paper Size**, and then press **OK**.
 - c Press the up or down arrow button to select the default paper size for the printer, and then press **OK**.
 - If you want to set the default paper type:
 - a Press **OK** to select **Paper Setup**.
 - b Press the up or down arrow button to scroll to **Paper Type**, and then press **OK**.
 - c Press the up or down arrow button to select the default paper type for the printer, and then press **OK**.
 - If you want to set the default photo print size:
 - a Press the up or down arrow button to scroll to **Defaults**, and then press **OK**.
 - b Press **OK** to select **Photo Print Size**.

- c Press the up or down arrow button to select the default photo print size for the printer, and then press **OK**.

Loading original documents on the scanner glass

- 1 Open the scanner lid and place the document facedown on the scanner glass.
- 2 Close the scanner lid.

Loading original documents into the ADF

You can load up to 50 sheets of an original document into the ADF for scanning, copying, and faxing. You can load A4-, letter-, or legal-size paper into the ADF.

- 1 Adjust the paper guide on the ADF tray to the width of the original document.
- 2 Load the original document faceup and top edge first into the ADF until you hear a *beep*.

Printing

Tips for printing

- Use the appropriate paper for your print job.
- Select a higher print quality for better prints.
- Make sure there is enough ink in the ink cartridges.
- Remove each sheet as it is printed when printing photos or when working with specialty media.
- Select the borderless setting when printing photos.

Printing basic documents

Printing a document

- 1 Load the paper in the printer.
- 2 Send the print job:
 - a With a document open, click **File → Print**.
 - b Click **Properties, Preferences, Options, or Setup**.
 - c Select the print quality, the number of copies to print, the type of paper to use, and how the pages should print.
 - d Click **OK** to close any printer software dialogs.
 - e Click **OK** or **Print**.

Collating printed copies

If you print multiple copies of a document, then you can choose to print each copy as a set (collated) or to print the copies as groups of pages (not collated).

Collated

Not collated

Notes:

- The collate option is available only when you are printing multiple copies.
 - To prevent smudging when printing photos, remove each photo as it exits the printer, and then let it dry before stacking.
- 1 With a document open, click **File → Print**.
 - 2 Click **Properties, Preferences, Options, or Setup**.
 - 3 From the Copies section of the Print Setup tab, enter the number of copies that you want to print, and then select **Collate Copies**.

4 Click **OK** to close any printer software dialogs.

5 Click **OK** or **Print**.

Printing pages in reverse order

By default, the first page is printed first. If you want to reverse the order in which pages print to make documents ready to read with the first page on top, then do the following:

1 With a document open, click **File → Print**.

2 Click **Properties, Preferences, Options, or Setup**.

3 From the Copies section of the Print Setup tab, select a page order:

- To print the last page first, select **Print Last Page First**.
- To print the first page first, clear the **Print Last Page First** check box.

Note: If two-sided printing is enabled, then you cannot print the last page first. To change the print order, you must first disable two-sided printing.

4 Click **OK** to close any printer software dialogs.

5 Click **OK** or **Print**.

Printing multiple pages on one sheet

1 With a document open, click **File → Print**.

2 Click **Properties, Preferences, Options, or Setup**.

3 From the Layout list of the Advanced tab, select **Pages per sheet**.

4 Select the number of page images to print on each page.

If you want each page image to be surrounded by a border, then select **Print Page Borders**.

5 Click **OK** to close any printer software dialogs.

6 Click **OK** or **Print**.

Printing documents from a memory card or flash drive (Windows only)

To enable the File Print function:

- The printer must be connected to a computer through a USB cable or through a network.
- The printer and the computer must be on.
- The memory card or flash drive must contain document files that are supported by the printer. For more information, see “Supported memory cards and file types” on page 36.
- The computer must contain applications that support the file types in the memory device.

- 1 Insert a memory card or flash drive.

When the printer detects the memory device, **Memory Card Detected** or **Storage Device Detected** appears on the display.

- 2 If only document files are stored on the memory device, then the printer automatically switches to File Print mode.
If document files and image files are stored on the memory device, then press the up or down arrow button to scroll to **Documents**, and then press **OK**.
- 3 Select and print the document:

If the printer is using a USB connection

- a Press the up or down arrow button to select the file name of the document that you want to print.
- b Press  to start printing the document.

If the printer is using a Wireless connection (selected models only)

- a Press the up or down arrow button to select the file name of the document that you want to print.
- b Press , and then wait for the printer to connect to the network computer or to finish searching the network for available computers.
- c When prompted, press the up or down arrow button to select the name of the network computer, and then press **OK** to start printing the document.

Notes:

- You may be prompted to enter a PIN if the computer requires it. Enter the PIN using the keypad.
- To assign a computer name and a PIN to the computer, see the Help for the printer software associated with your operating system.

Printing specialty documents

Printing envelopes

- 1 Load the envelopes in the printer.
- 2 Send the print job:
 - a With a document open, click **File → Print**.
 - b Click **Properties**, **Preferences**, **Options**, or **Setup**.
 - c From the Paper Type list of the Print Setup tab, select **Plain Paper**.
 - d From the Paper Size list, select the envelope size.

Note: To print on a custom-size envelope, select **Custom Size**, and then specify the height and width of the envelope.

- e Select an orientation.
- f Click **OK** to close any printer software dialogs.
- g Click **OK** or **Print**.

Notes:

- Most envelopes use landscape orientation.
- Make sure the same orientation is also selected in the software application.

Printing labels

- 1 Load the label sheets in the printer.
- 2 Send the print job:
 - a With a document open, click **File → Print**.
 - b Click **Properties, Preferences, Options, or Setup**.
 - c From the Paper Size list of the Print Setup tab, choose a paper size that matches the size of the label sheet. If no paper size matches the label sheet size, then set a custom size.
If necessary, choose the appropriate type of paper from the Paper Type list.
 - d Click **OK** to close any printer software dialogs.
 - e Click **OK** or **Print**.

Tips on loading label sheets

- Make sure the top of the label sheet feeds into the printer first.
- Make sure the adhesive on the labels does not extend to within 1 mm of the edge of the label sheet.
- Make sure the paper guide or paper guides rest against the edges of the label sheet.
- Use full label sheets. Partial sheets (with areas exposed by missing labels) may cause labels to peel off during printing, resulting in a paper jam.

Printing on custom-size paper

Before beginning these instructions, load the custom-size paper in the printer.

- 1 With a document open, click **File → Print**.
- 2 Click **Properties, Preferences, Options, or Setup**.
- 3 From the Paper Size list of the Print Setup tab, select **Custom Size**.
The Define Custom Paper Size dialog appears.
- 4 Set the paper size.
- 5 Select the measurement units to use (inches or millimeters).
- 6 Click **OK** to close any printer software dialogs.
- 7 Click **OK** or **Print**.

Working with photos

Using a memory card or flash drive with the printer

Memory cards and flash drives are storage devices frequently used with cameras and computers. You can remove the memory card from the camera or the flash drive from the computer and insert it directly into the printer.

- 1 Insert a memory card into the card slot or a flash drive into the USB port.

Inserting a memory card

Notes:

- Insert the card with the brand name label facing right.
- Make sure any arrows on the card point toward the printer.
- If necessary, connect the memory card to the adapter that came with it.
- Make sure that the memory card inserted is supported by the printer. For more information, see “Supported memory cards and file types” on page 36.

Inserting a flash drive

Notes:

- The flash drive uses the same port that is used for a PictBridge camera cable.
- An adapter may be necessary if your flash drive does not fit directly into the port.

Warning—Potential Damage: Do not touch any cables, any network adapter, any connector, the memory device, or the printer in the areas shown while actively printing, reading, or writing from the memory device. A loss of data can occur.

- 2 Look for **Memory Card Detected** or **Storage Device Detected** on the display.

Notes:

- If the printer does not recognize the memory device, then remove and reinsert it.
- If a flash drive or a digital camera set to mass storage mode is inserted into the USB port while a memory card is in the card slot, then a message appears on the display prompting you to choose which memory device to use.

Supported memory cards and file types

Memory Card	File Type
• Secure Digital (SD) • Secure Digital High Capacity (SDHC) • Micro Secure Digital (with adapter) (Micro SD) • Mini Secure Digital (with adapter) (Mini SD) • MultiMedia Card (MMC) • Reduced Size MultiMedia Card (with adapter) (RS-MMC) • MultiMedia Card mobile (with adapter) (MMCmobile) • Memory Stick • Memory Stick PRO • Memory Stick Duo (with adapter) • Memory Stick PRO Duo (with adapter) • xD-Picture Card • xD-Picture Card (Type H) • xD-Picture Card (Type M)	Documents: • .doc (Microsoft Word) • .xls (Microsoft Excel) • .ppt (Microsoft PowerPoint) • .pdf (Adobe Portable Document Format) • .rtf (Rich Text Format) • .docx (Microsoft Word Open Document Format) • .xlsx (Microsoft Excel Open Document Format) • .pptx (Microsoft PowerPoint Open Document Format) • .wpd (WordPerfect) Images: • JPEG • TIFF

Printing photos using the printer control panel

- 1 Load photo paper.
- 2 From the printer control panel, press .
- 3 Insert a memory card, flash drive, or digital camera set to mass storage mode.
If image files and document files are stored in the memory device, then press  to select **Photos**.
- 4 Press the up or down arrow button to scroll to **Print Photos**, and then press .
- 5 Press the up or down arrow button to select a photo printing option, and then press .

Note: You can choose to print all the photos, print photos that fall within a date range, print selected photos by photo range, print photos using pre-defined photo size templates, or print pre-selected photos from a digital camera using Digital Print Order Format (DPOF). The DPOF option appears only when there is a valid DPOF file in your memory device.

- 6 Press the left or right arrow button to select the layout of the photo or photos you want to print, and then press .
- 7 If you want to adjust the print settings:
 - a Press  again.
 - b Make your selections using the arrow buttons.
 - c After adjusting your settings, press the up or down arrow button to scroll to **Continue**, and then press .

- 8 Press the **Color/Black** button to set a color or black-and-white print.

When you select color or black-only printing, the light near your choice comes on.

- 9 Press .

Note: For best results, allow the prints to dry at least 24 hours before stacking, displaying, or storing.

Editing photos using the printer control panel

- 1 Load photo paper.

- 2 Insert a memory card or flash drive.

If document files and image files are stored on the memory device, then press **OK** to select **Photos**.

- 3 From the printer control panel, press **OK** to select **Select and Print**.

- 4 Press the left or right arrow button to select the layout of the photo you want to print, and then press **OK**.

- 5 Press the left or right arrow button to select a photo for editing and printing.

- 6 Press the up or down arrow button to scroll to , and then press **OK**.

From here	You can
Brightness	Adjust the brightness of a photo.
Crop	Crop a photo.
Auto Enhance	Enhance a photo automatically.
Reduce Red Eye	Reduce the red-eye effect caused by light reflection.
Rotate	Rotate a photo in 90-degree increments clockwise or counterclockwise.
Colorized Effect	Select whether to print a photo in black and white, sepia, antique brown, or antique gray.
Frames	Select a frame for the photo.

- 7 Press the arrow buttons to make your selections.

- 8 Press the up or down arrow button to scroll to , and then press **OK**.

- 9 Press the up or down arrow button to scroll to , and then press **OK**.

- 10 If you want to adjust the print settings:

a Press **OK** again.

b Press the arrow buttons to make your selections.

c Press **OK** to save your selections.

d Press the up or down arrow button to scroll to **Continue**, and then press **OK**.

- 11 Press the **Color/Black** button to set a color or black-and-white print.

When you select color or black-only printing, the light near your choice comes on.

- 12 Press .

Note: For best results, allow the prints to dry at least 24 hours before stacking, displaying, or storing.

Printing photos from a memory device using the printer software

- 1 Load photo paper.
- 2 From the printer control panel, press .
- 3 Insert a memory card or flash drive.
- 4 Transfer or print the photos:

If the printer is using a USB connection

- Fast Pics launches automatically when you insert the memory device. Follow the instructions on the computer screen to transfer the photos to the computer or to print.

If the printer is using a Wireless connection (selected models only)

- a Press the up or down arrow button to scroll to **Share Media on Network**, and then press **OK**.
- b Press the up or down arrow button to select the network computer where you want to save the photos, and then press **OK**.
- c Transfer or print the photos:
 - Fast Pics launches automatically when a connection is established. Follow the instructions on the computer screen to transfer the photos to the computer or to print.

Printing photos from a PictBridge-enabled digital camera

PictBridge is a technology available in most digital cameras that lets you print directly from your digital camera without using a computer.

- 1 Insert one end of the USB cable into the camera.
Note: Use only the USB cable that came with the camera.
- 2 Insert the other end of the cable into the PictBridge port on the front of the printer.

Notes:

- Make sure that the digital camera is set to the correct USB mode. If the camera USB selection is incorrect, then the camera is detected as a flash drive, or an error message is displayed on the printer control panel. For more information, see the camera documentation.
- The printer reads only one memory device at a time.

Warning—Potential Damage: Do not touch any cables, any network adapter, any connector, the memory device, or the printer in the areas shown while actively printing, reading, or writing from the memory card. A loss of data can occur.

- 3 If the PictBridge connection is successful, then the following message appears on the display: **Use Camera to choose and print photos. Press OK to select printer default settings.**
- 4 If you want to change the default print settings:
 - a Press **OK** to access the PictBridge menu.
 - b Press the arrow buttons to select the paper size, paper type, photo size, and layout of the photos that you want to print. Press **OK** each time you make a selection.

Note: The printer will use the default print settings unless you change the print settings from the camera.

- 5 See the documentation for your camera to begin printing.

Note: If you insert the camera while the printer is performing another job, then wait for the job to finish before printing from the camera.

Printing photos from a memory device using the proof sheet

- 1 Load letter- or A4-size plain paper.
- 2 From the printer control panel, press .
- 3 Insert a memory card or flash drive.

If document files and image files are stored on the memory device, then press **OK** to select **Photos**.

- 4 Press the up or down arrow button to scroll to **Proof Sheet**, and then press **OK**.

- 5 Press the up or down arrow button to select an option to print a proof sheet.

You can print a proof sheet:

- For the 20 most recent photos, if there are 20 or more photos on the memory device.
- For all photos on the memory device.
- By date, if the photos on the card were taken on different dates. If you choose this option, then press the arrow buttons to set the start and end dates, and then press **OK** to save your selections.

- 6 Press .

The proof sheet prints.

- 7 Follow the instructions on the proof sheet to select which photos to print, the number of copies per photo, red-eye reduction, page layout, print options, and paper size.

Note: When making selections, make sure to fill in the circles completely.

- 8 Load the proof sheet facedown on the scanner glass.

Scan Proof Sheet appears on the display.

Note: If this option does not appear on the display, then press the up or down arrow button until it appears on the display.

- 9 Press **OK**.

- 10 Press .

The printer scans the proof sheet.

- 11 Load photo paper.

Note: Make sure that the paper matches the size that you selected on the proof sheet.

- 12 Press the **Color/Black** button to set a color or black-and-white print.

When you select color or black-only printing, the light near your choice comes on.

- 13 Press  to print the photos.

Note: For best results, allow the prints to dry at least 24 hours before stacking, displaying, or storing.

Printing photos from a digital camera using DPOF

If your camera supports Digital Print Order Format (DPOF), then you can specify which photos to print, how many of each, and the print settings while the memory card is still in the camera. The printer recognizes these settings when you insert the memory card into the printer or connect the camera to the printer.

Note: If you specify a photo size while the memory card is still in the camera, then make sure that the size of the paper loaded in the printer is not smaller than the size you specify in the DPOF selection.

- 1 Load photo paper.

- 2 From the printer control panel, press .

- 3 Insert a memory card.

Memory Card Detected appears on the display.

- 4 Press the up or down arrow button to scroll to **Print Photos**, and then press **OK**.

- 5 Press the up or down arrow button to scroll to **Print Camera Selections (DPOF)**, and then press  to print the photos.

Note: This option appears only if a DPOF file is detected in the memory card.

Note: For best results, allow the prints to dry at least 24 hours before stacking, displaying, or storing.

Printing from a Bluetooth-enabled device

- This printer is compliant with Bluetooth Specification 2.0. It supports the following profiles: Object Push Profile (OPP) and Serial Port Profile (SPP). Check with your Bluetooth-enabled device manufacturers (cellular phone or PDA) to determine their hardware compatibility and interoperability. It is recommended that you use the latest firmware on your Bluetooth-enabled device.
- To print Microsoft documents from your Windows® Mobile/Pocket PC PDA, additional third-party software and drivers are required. For more information about the required software, see the documentation for your PDA.

Setting up a connection between your printer and a Bluetooth-enabled device

Note: The printer does not support printing files from your computer using a Bluetooth connection.

You need to set up a connection between a Bluetooth-enabled device and your printer if you are sending a print job from the Bluetooth device for the first time. You will need to repeat the setup if:

- You reset the printer to its factory default settings.
- You change the Bluetooth security level or the Bluetooth pass key.
- The Bluetooth-enabled device you are using requires users to set up a Bluetooth connection on every print job. For more information, see the documentation for your Bluetooth device.
- The name of the Bluetooth device you are using is automatically deleted from the Bluetooth device list.

When the Bluetooth security level is set to High, the printer saves a list of up to eight Bluetooth devices that have previously set up a connection with the printer. When the printer detects more than eight devices, the least recently used device is removed from the list. You need to repeat the setup of the deleted device to be able to send a print job to the printer.

Note: You need to set up a connection for each Bluetooth device that you use to send a print job to the printer.

To set up a connection between the printer and a Bluetooth-enabled device:

- 1 Insert a USB Bluetooth adapter into the USB port located on the front of the printer.

Bluetooth Dongle Connected appears on the display.

Note: A Bluetooth adapter is not included with the printer.

- 2 From the printer control panel, press .
- 3 Press the up or down arrow button to scroll to **Bluetooth Setup**, and then press .
- 4 Press the up or down arrow button to scroll to **Discovery**, and then press .

- 5 Make sure Discovery is set to On. If necessary, press the up or down arrow button to scroll to **On**, and then press **OK**.

The printer is now ready to accept a connection from a Bluetooth-enabled device.

- 6 Configure the Bluetooth-enabled device to set up a connection to the printer. For more information, see the documentation for your Bluetooth device.

Note: If the Bluetooth Security Level on the printer is set to High, then you must enter a pass key.

Setting the Bluetooth security level

- 1 Insert a Bluetooth USB adapter into the USB port.

Bluetooth Dongle Connected appears on the display.

Note: A Bluetooth adapter is not included with the printer.

- 2 From the printer control panel, press .
- 3 Press the up or down arrow button to scroll to **Bluetooth Setup**, and then press **OK**.
- 4 Press the up or down arrow button to scroll to **Security Level**, and then press **OK**.
- 5 Press the up or down arrow button to select the security level, and then press **OK**.
 - **Low**—allows Bluetooth devices to connect and send print jobs to your printer without requiring users to enter a pass key.
 - **High**—requires users to enter a four-digit numeric pass key on the Bluetooth device before connecting and sending print jobs to the printer.
- 6 The Bluetooth Pass Key menu opens on the printer control panel display if you set the security level to High. Use the keypad to enter your four-digit pass key, and then press **OK**.

Printing from a Bluetooth-enabled device

Note: The printer does not support printing files from your computer using a Bluetooth connection.

- 1 Insert a USB Bluetooth adapter into the USB port.

Bluetooth Dongle Connected appears on the display.

Warning—Potential Damage: Do not touch any cables, any network adapter, any connector, the USB Bluetooth adapter, or the printer in the areas shown while actively printing, reading, or writing from a Bluetooth-enabled device. A loss of data can occur.

Notes:

- A Bluetooth adapter is not included with the printer.
 - Your printer automatically switches to Bluetooth mode when you insert a USB Bluetooth adapter.
- 2 Make sure the printer is set up to receive Bluetooth connections. For more information, see “Setting up a connection between your printer and a Bluetooth-enabled device” on page 41.
 - 3 Set up the Bluetooth device to print to the printer. For more information, see the documentation for your Bluetooth device.
 - 4 See the documentation for your Bluetooth device to begin printing.

Note: If the Bluetooth Security Level on the printer is set to High, you must enter a pass key.

Printing on both sides of the paper (duplexing)

Printing on both sides of the paper (duplexing) automatically

The automatic duplex unit, available only on selected printer models, supports letter- and A4-size paper. If you purchased a model without automatic duplex, or if you need to print duplex using other paper sizes, then see the instructions for printing on both sides of the paper (duplexing) manually.

- 1 With a document open, click **File → Print**.
- 2 Click **Properties, Preferences, Options, or Setup**.
- 3 Click the **Advanced** tab.

4 From the 2-Sided Printing section, select **On** from the drop-down menu.

Note: To use the settings defined in the printer, select **Use Printer Settings**.

5 Select either the **Sideflip** or **Topflip** option. Sideflip is the setting most often used.

6 Select **Extend Dry Time**, and then select a setting. In regions with high humidity, select **Extended**.

7 Click **OK** to close any printer software dialogs.

8 Click **OK** or **Print**.

Note: To return to single-sided printing, return to the Advanced tab. From the 2-Sided Printing section, select **Off** from the drop-down menu.

Printing on both sides of the paper (duplexing) manually

1 With a document open, click **File → Print**.

2 Click **Properties, Preferences, Options, or Setup**.

3 Click the **Advanced** tab.

4 From the 2-Sided Printing section, select **Manual**.

Note: The Print Instruction Page to Assist in Reloading item is selected automatically.

5 Click **OK**. The printer prints the odd-numbered pages and the instruction sheet.

6 Flip and reload the paper, following the directions on the instruction sheet to complete the print job.

Note: To return to single-sided printing, return to the Advanced tab. From the 2-Sided Printing section, select **Off** from the drop-down menu.

Managing print jobs

Setting your printer as the default printer

Your printer should be selected automatically from the Print dialog when you send a print job. If you have to manually select your printer, then it is not the default printer.

To set the default printer:

1 Click , or click **Start** and then click **Run**.

2 In the Start Search or Run box, type **control printers**.

- 3 Press **Enter**, or click **OK**.
The printer folder opens.
- 4 Right-click the printer, and then select **Set as Default Printer**.

Changing the printing mode

To conserve ink, you can change the default printing mode for all print jobs to Quick Print. It uses less ink and is ideal for printing text-only documents. If you need to change to a different print mode to print photos or other high-quality documents, then you can select a different mode from the Print dialog before sending the print job.

To change the default print mode:

- 1 Click , or click **Start** and then click **Run**.
- 2 In the Start Search or Run box, type `control printers`.
- 3 Press **Enter**, or click **OK**.
The printer folder opens.
- 4 Right-click the printer, and then select **Printing Preferences**.
- 5 Select **Quick Print** as the printing mode.

Changing the printing mode for a single print job

- 1 With a document open, click **File → Print**.
- 2 Click **Properties**, **Preferences**, **Options**, or **Setup**.
- 3 Select **Automatic**, **Quick Print**, **Normal**, or **Best**.

Note: Printing in Quick Print mode uses less ink and is ideal for printing text documents.

Pausing print jobs

- 1 Click , or click **Start** and then click **Run**.
- 2 In the Start Search or Run box, type `control printers`.
- 3 Press **Enter**, or click **OK**.
The printer folder opens.
- 4 Right-click the printer, and then select **Pause Printing**.

Resuming print jobs

- 1 Click , or click **Start** and then click **Run**.
- 2 In the Start Search or Run box, type `control printers`.
- 3 Press **Enter**, or click **OK**.
The printer folder opens.
- 4 Right-click the printer, and then select **Open**.

5 Resume the print job:

- If you want to resume a particular print job, then right-click the document name, and then select **Resume**.
- If you want to resume all print jobs in the queue, then click **Printer**, and then clear the selection for Pause Printing.

Canceling print jobs

To cancel a print job from the printer control panel, press **X**. To cancel a print job from the computer, do the following:

1 Click , or click **Start** and then click **Run**.

2 In the Start Search or Run box, type `control printers`.

3 Press **Enter**, or click **OK**.

The printer folder opens.

4 Right-click the printer, and then select **Open**.

5 Cancel the print job:

- If you want to cancel a particular print job, then right-click the document name, and then select **Cancel**.
- If you want to cancel all print jobs in the queue, then click **Printer** → **Cancel All Documents**.

Copying

ADF	Scanner glass
 Use the ADF for multiple-page documents. Note: The ADF is available only on selected models. If you purchased a printer without an ADF, then load original documents or photos on the scanner glass.	 Use the scanner glass for single pages, small items (such as postcards or photos), transparencies, photo paper, or thin media (such as magazine clippings).

Tips for copying

- When using the ADF, adjust the paper guide on the ADF to the width of the original document.
- When using the scanner glass, close the scanner lid to avoid dark edges on the scanned image.
- Do *not* load postcards, photos, small items, transparencies, photo paper, or thin media (such as magazine clippings) into the ADF. Place these items on the scanner glass.

Making copies

- 1 Load paper.
- 2 Load an original document faceup into the ADF or facedown on the scanner glass.
- 3 From the printer control panel, press .
- 4 Press the left or right arrow button to select the number of copies, and then press the **Color/Black** button to set a color or black-and-white copy.

When you select color or black-only printing, the light near your choice comes on.
- 5 Press .

Copying photos

- 1 Load photo paper.
- 2 Place a photo facedown on the scanner glass.

- 3 From the printer control panel, press .
- 4 Press the up or down arrow button to scroll to **Photo Reprint**.
- 5 Press the left or right arrow button to select the desired photo size.
- 6 Press .

Note: For best results, allow the prints to dry at least 24 hours before stacking, displaying, or storing.

Copying an ID card

- 1 Load paper.
- 2 From the printer control panel, press .
- 3 Press the up or down arrow button to scroll to **ID Card Copy**.
- 4 Press .
- 5 Load the front side of the ID card facedown on the top left corner of the scanner glass, and then press  to save the image to the printer memory.
- 6 When prompted to copy the back side of the ID card, press  to select **Yes**.
- 7 Load the back side of the ID card facedown on the top left corner of the scanner glass, and then press  to start printing.

Copying a two-sided document

- 1 Load paper.
- 2 Load an original document faceup into the ADF or facedown on the scanner glass.
- 3 From the printer control panel, press .
- 4 Press the up or down arrow button to scroll to **2-Sided Copies**.
- 5 Press the left or right arrow button to scroll to **2 to 1** or **2 to 2**.
 - Select **2 to 1** to make single-sided copies of the two-sided document.
 - Select **2 to 2** to make two-sided copies (like the original document).
- 6 Press .
- 7 Follow the instructions on the display.

Enlarging or reducing images

- 1 Load paper.
- 2 Load an original document faceup into the ADF or facedown on the scanner glass.
- 3 From the printer control panel, press .
- 4 Press the up or down arrow button to scroll to **Resize**.

5 Press the left or right arrow button to select the setting that you want.

Notes:

- If you select Custom %, then press **OK**, and then press the left or right arrow button to select the desired custom percent value. Press **OK** to save the setting.
- If you select Borderless, then the printer will reduce or enlarge the document or photo as necessary to print a borderless copy on the paper size that you selected. For best results with this resize setting, use photo paper and set the paper type to Photo, or let the printer automatically detect the paper type.
- If you select a poster size, then the printer will print a single image across multiple printed pages.

6 Press .

Note: After the copy job is finished, press  to reset the settings to the default. The resize setting also switches to 100% after two minutes of printer inactivity.

Adjusting copy quality

- 1 Load paper.
- 2 Load an original document faceup into the ADF or facedown on the scanner glass.
- 3 From the printer control panel, press .
- 4 Press the up or down arrow button to scroll to **Quality**.
- 5 Press the left or right arrow button to set the copy quality to Automatic, Draft, Normal, or Photo, and then press **OK** to save your setting.
- 6 Press .

Making a copy lighter or darker

- 1 Load paper.
- 2 Load an original document faceup into the ADF or facedown on the scanner glass.
- 3 From the printer control panel, press .
- 4 Press the up or down arrow button to scroll to **Lighter/Darker**.
- 5 Press the left or right arrow button to adjust the slider, and then press **OK** to save your setting.
Note: Pressing the left arrow button makes the copy lighter, and pressing the right arrow button makes the copy darker.
- 6 Press .

Collating copies using the printer control panel

If you print multiple copies of a document, then you can choose to print each copy as a set (collated) or to print the copies as groups of pages (not collated).

Collated

Not collated

- 1 Load paper.
- 2 Load an original document faceup into the ADF or facedown on the scanner glass.
- 3 From the printer control panel, press .
- 4 Press the left or right arrow button to select the number of copies, and then press .
- 5 Press the up or down arrow button to scroll to **Collate**.
- 6 Press the left or right arrow button to scroll to **On**.
- 7 Press .

Repeating an image on one page

You can print the same page image multiple times on one sheet of paper. This option is helpful when creating items such as labels, decals, flyers, and handouts.

- 1 Load paper.
- 2 Load an original document faceup into the ADF or facedown on the scanner glass.
- 3 From the printer control panel, press .
- 4 Press the up or down arrow button to scroll to **Copies per Sheet**.
- 5 Press the left or right arrow button to select the number of times that an image is repeated on a page: once, four times, nine times, or 16 times.
- 6 Press .

Copying multiple pages on one sheet

The Pages per Sheet setting lets you copy multiple pages on one sheet by printing smaller images of each page. For example, you can condense a 20-page document into five pages if you use this setting to print four page images per sheet.

- 1 Load paper.
- 2 Load an original document faceup into the ADF or facedown on the scanner glass.
- 3 From the printer control panel, press .
- 4 Press the up or down arrow button to scroll to **Pages per Sheet**.

- 5 Press the left or right arrow button to select the number of pages that you want to copy on a sheet of paper. You may choose to copy one, two, or four page images on a sheet.

Note: If you are copying four pages in landscape format, scan pages 3 and 4 first, and then scan pages 1 and 2.

- 6 Press .

Making a duplex copy

Making a duplex copy automatically

The automatic duplex unit, available only on selected printer models, supports letter- and A4-size paper. If you purchased a model without automatic duplex, or if you need to make duplex copies using other paper sizes, then see the instructions for making a duplex copy manually.

Note: You cannot make duplex copies on envelopes, card stock, or photo paper.

- 1 Load paper.
- 2 Load an original document faceup into the ADF or facedown on the scanner glass.
- 3 From the printer control panel, press .
- 4 Press the up or down arrow button to scroll to **2-Sided Copies**.
- 5 Choose the duplex option that matches your original document:
 - If you are copying a one-sided document, then press the left or right arrow button to scroll to **1 to 2**.
 - If you are copying a two-sided document, then press the left or right arrow button to scroll to **2 to 2**.
- 6 Press  to save the first page of the document to the printer memory.
- 7 Follow the instructions on the display.

Making a duplex copy manually

- 1 Load paper.
- 2 Load an original document faceup into the ADF or facedown on the scanner glass.
- 3 From the printer control panel, press .
- 4 Press the left or right arrow button to select the number of copies, and then press the **Color/Black** button to set a color or black-and-white copy.

When you select color or black-only printing, the light near your choice comes on.
- 5 Press  to print on one side of the paper.
- 6 Load the next page of the document:
 - If you are copying a one-sided document, then load the next page faceup into the ADF or facedown on the scanner glass.
 - If you are copying a two-sided document, then flip the original document, and then reload it faceup into the ADF or facedown on the scanner glass.

7 Remove the paper from the paper exit tray, and then reload the paper to print the other side of the document.

8 Press .

Canceling copy jobs

To cancel a copy job, press .

Scanning stops and the printer returns to the previous menu.

Scanning

ADF	Scanner glass
 Use the ADF for multiple-page documents. Note: The ADF is available only on selected models. If you purchased a printer without an ADF, then load original documents or photos on the scanner glass.	 Use the scanner glass for single pages, small items (such as postcards or photos), transparencies, photo paper, or thin media (such as magazine clippings).

Tips for scanning

- When using the ADF, adjust the ADF paper guide to the width of the original document.
- When using the scanner glass, close the scanner lid to avoid dark edges on the scanned image.
- Do *not* load postcards, photos, small items, transparencies, photo paper, or thin media (such as magazine clippings) into the ADF. Place these items on the scanner glass.
- Select the PDF file type if you want to scan multiple pages and save them as one file.

Scanning to a local or network computer

- 1 Load an original document faceup into the ADF or facedown on the scanner glass.
- 2 From the printer control panel, press .
- 3 Press the left or right arrow button to scroll to **USB** or the name of the network computer, and then press **OK**.
The local or network computer is the destination that will receive the scan.

Notes:

- You may be prompted to enter a PIN if the computer requires it. Enter the PIN using the keypad.
 - To assign a computer name and a PIN to the computer, see the Help for the printer software associated with your operating system.
- 4 Wait until the printer has finished downloading a list of the scan applications available on the selected computer.
 - 5 Press the left or right arrow button to select an application, and then press **OK**.

- 6 Press the arrow buttons to select the resolution quality and the original image size. Press **OK** each time you make a selection.
- 7 Press  to start scanning.

The scan is complete when the application you selected in step 5 opens on the destination computer, and the scan appears within the application as a new file.

Scanning to a flash drive or memory card

Before you begin, make sure your flash drive or memory card is not write protected.

- 1 Load an original document faceup into the ADF or facedown on the scanner glass.
- 2 From the printer control panel, press .
- 3 Press the up or down arrow button to scroll to **Memory Device**.
- 4 Insert the flash drive or memory card, and then press **OK**.
- 5 Press the arrow buttons to select the resolution quality, the output file type you want to create, and the original image size. Press **OK** each time you make a selection.

Note: Select the PDF file type if you want to scan multiple pages and save them as one file.

- 6 Press  to start scanning.

The scan is complete when a message appears on the printer control panel indicating that the file you scanned has been saved.

Scanning photos into an editing application

Using the printer control panel

- 1 Load the photo or photos facedown on the scanner glass.
- 2 From the printer control panel, press .
- 3 Press the left or right arrow button to scroll to **USB** or the name of the network computer to receive the scan, and then press **OK**.

The local or network computer is the destination that will receive the scan.

Notes:

- You may be prompted to enter a PIN if the computer requires it. Enter the PIN using the keypad.
- To assign a computer name and a PIN to the computer, see the Help for the printer software associated with your operating system.

- 4 Wait until the printer has finished downloading the list of scan applications available on the selected computer.
- 5 Press the left or right arrow button to select a photo editing application, and then press **OK**.
- 6 Press the arrow buttons to select the resolution quality, the type of output you want to create, and the original image size. Press **OK** each time you make a selection.
- 7 Press  to start scanning.

The scan is complete when the photo editing application you selected in step 5 opens on the destination computer, and the scan appears within the application as a new file.

Using the printer software

- 1 Load a photo or photos facedown on the scanner glass.
- 2 Click  or **Start**.
- 3 Click **All Programs** or **Programs**, and then select the printer program folder from the list.
- 4 Select **Printer Home**.
- 5 Choose your printer from the printer drop-down list.
- 6 Click **Photo**.
 - If you want to scan a single photo, or multiple photos as a single image, then select **Single photo**.
 - If you want to scan multiple photos at once and save them as separate images, then select **Split into individual photos**.

Note: Allow at least 1/4 inch of space between photos if you want to scan multiple photos at once and save them as separate images.

Scanning starts and the scan progress dialog appears.

- 7 Save the photo or photos and open in a photo editing application to edit.

Scanning documents into an editing application

An Optical Character Recognition (OCR) application allows you to edit an original text document that has been scanned. In order for this to work, you must have an OCR application stored on a local or network computer and you must be able to choose it from the list of applications when you set up the scan.

When selecting settings for the scan:

- Select to scan to the local computer or network computer where the OCR is installed.
- Select to scan to the highest resolution.

- 1 Load an original document faceup into the ADF or facedown on the scanner glass.
- 2 Click  or **Start**.
- 3 Click **All Programs** or **Programs**, and then select the printer program folder from the list.
- 4 Select **Printer Home**.
- 5 Choose your printer from the printer drop-down list.
- 6 Click **Document**.

Scanning starts and the scan progress dialog appears.

- 7 When the scan is finished, save the document in a word-processing application.
- 8 Open the document in the selected application to edit it.

Scanning directly to e-mail using the printer software

- 1 Load an original document faceup into the ADF or facedown on the scanner glass.
- 2 Click  or **Start**.
- 3 Click **All Programs** or **Programs**, and then select the printer program folder from the list.
- 4 Select **Printer Home**.
- 5 Choose your printer from the printer drop-down list.
- 6 Click **Email**, and then select **Photo**, **Document** or **PDF**.
Note: You can select Document only if an OCR application is stored on your computer.
Scanning starts and the scan progress dialog appears.
- 7 When the scan is finished, a new e-mail message is created with the scanned document automatically attached.
- 8 Compose your e-mail message.

Note: If your e-mail program does not open automatically, then you can scan the document to the computer and then send it through e-mail as an attachment.

Scanning to a PDF

- 1 Load an original document faceup into the ADF or facedown on the scanner glass.
- 2 Click  or **Start**.
- 3 Click **All Programs** or **Programs**, and then select the printer program folder from the list.
- 4 Select **Printer Home**.
- 5 Choose your printer from the printer drop-down list.
- 6 Click **PDF**.
Scanning starts and the scan progress dialog appears.
- 7 Save the document as a PDF.

Scanning FAQ

How can I improve the quality of a scan?

- Make sure your original documents are in good condition.
- Make sure the application that receives the scanned document is appropriate. For example, if you are scanning a photo to edit it, then make sure you choose a photo editing application to receive the scan. If you are scanning a document to edit the text, then make sure you choose an OCR application.
- Use a high resolution.

How do I scan in black and white?

Color is the default for all scans. To scan in black and white, press the **Color/Black** button on the printer control panel to switch from color to black and white.

Why am I being asked for a PIN?

PINs are a security measure used to restrict the scanned information from going into certain locations, or to keep what is being scanned from being seen or used by others. You may be prompted to enter a PIN if the network computer you are scanning to requires one.

To learn how PINs get assigned to network computers, see the Help for the printer software associated with your operating system.

What is an application list, and how do I update it?

When you scan a file, you can choose which application to use to open it on your computer. The printer downloads this application list from your computer when scanning for the first time. If you do not see the application you want on the list, or if you install new applications on your computer, then update the application list in the printer.

Updating the application list

- 1 From the printer control panel, press .
- 2 Press the arrow buttons to scroll to **Computer** or **Network**.
- 3 Select a local or network computer to receive the scan and then press **OK**.
- 4 Select **REFRESH** from the list of scan applications.

This updates the application list in the printer.

Canceling scan jobs

Press  on the printer control panel, or click **Cancel** on the computer screen.

Faxing

CAUTION—SHOCK HAZARD: Do not use the fax feature during a lightning storm. Do not set up this product or make any electrical or cabling connections, such as the power supply cord or telephone, during a lightning storm.

Setting up the printer to fax

Scenario 1: Standard telephone line

Setup 1: Printer is connected to a dedicated fax line

To connect:

Connect the cable from the wall jack to the  port of the printer.

Tips for this setup:

- You can set the printer to receive faxes automatically (Auto Answer On) or manually (Auto Answer Off).
- If you want to receive faxes automatically (Auto Answer On), then set the printer to pick up on any number of rings that you want.

Setup 2: Printer is sharing the line with an answering machine

Connected to the same telephone wall jack

To connect:

- 1 Connect the cable from the wall jack to the  port of the printer.
- 2 Remove the protective plug from the  port of the printer, and then connect the answering machine to the port.

Connected to different wall jacks

To connect:

Connect the cable from the wall jack to the  port of the printer.

Tips for this setup:

- If you have only one telephone number on your line, then you need to set the printer to receive faxes automatically (Auto Answer On).
- Set the printer to pick up calls two rings after the answering machine. For example, if the answering machine picks up calls after four rings, then set the printer to pick up after six rings. This way, the answering machine picks up calls first and your voice calls are received. If the call is a fax, then the printer detects the fax signal on the line and takes over the call.
- If you subscribe to a distinctive ring service provided by your telephone company, then make sure that you set the correct ring pattern for the printer. Otherwise, the printer will not receive faxes even if you have set it to receive faxes automatically.

Setup 3: Printer is sharing the line with a telephone subscribed to voice mail service

To connect:

- 1 Connect the cable from the wall jack to the  port of the printer.
- 2 Remove the protective plug from the  port of the printer, and then connect the telephone to the port.

Tips for this setup:

- This setup works best if you subscribe to a distinctive ring service. If you have distinctive ring service, then make sure that you set the correct ring pattern for the printer. Otherwise, the printer will not receive faxes even if you have set it to receive faxes automatically.
- If you have only one telephone number on your line, then you need to set the printer to receive faxes manually (Auto Answer Off).

When you answer the telephone and you hear fax tones, press *9* or the manual answer code on the telephone to receive the fax.

- You can also set the printer to receive faxes automatically (Auto Answer On), but you need to turn off the voice mail service when you are expecting a fax. This setting works best if you are using voice mail more often than fax.

Scenario 2: Digital Subscriber Line (DSL)

A Digital Subscriber Line splits your regular telephone line into two channels: voice and Internet. Telephone and fax signals travel through the voice channel, and Internet signals pass through the other channel. This way, you can use the same line for analog voice calls (including faxes) and digital Internet access.

To minimize interference between the two channels and ensure a quality connection, you need to install a DSL filter for the analog devices (fax machine, telephone, answering machine) in your network. Interference causes noise and static on the telephone, failed and poor quality faxes for the printer, and slow Internet connection on your computer.

To install a filter for the printer:

- 1 Connect the line port of the DSL filter to the wall jack.
- 2 Connect a telephone cable from the  port on the back of the printer to the phone port on the DSL filter.

- 3 To continue using a computer for Internet access, connect the computer to the DSL HPN port on the DSL filter.
- 4 To connect a telephone to the printer, remove the protective plug from the ☎ port of the printer and then connect the telephone to the port.

Scenario 3: VoIP telephone service

To connect:

- 1 Connect one end of a telephone cable to the ☎ port of the printer.
- 2 Connect the other end of the cable to the port labeled **Phone Line 1** or **Phone Port** on the VoIP adapter.
The port labeled **Phone Line 2** or **Fax Port** is not always active. You may need to pay extra to your VoIP provider if you want to activate the second phone port.
- 3 Remove the protective plug from the ☎ port of the printer, and then connect the telephone to the port.

Tips for this setup:

- To make sure that the phone port on the VoIP adapter is active, plug an analog telephone into the phone port, and then listen for a dial tone. If you hear a dial tone, then the port is active.
- If you need two phone ports for your devices but do not want to pay extra, then do not plug the printer into the second phone port. You can use a phone splitter. Plug the phone splitter into the **Phone Line 1** or **Phone Port**, and then plug the printer and telephone into the splitter.

Make sure you use a phone splitter, *not* a line splitter. To make sure that you are using the correct splitter, plug an analog telephone into the splitter and then listen for a dial tone.

Scenario 4: Digital telephone service through a cable provider

Setup 1: Printer is connected directly to a cable modem

Follow this setup if you normally connect your telephone to a cable modem.

To connect:

- 1 Connect one end of a telephone cable to the  port of the printer.
- 2 Connect the other end of the cable to the port labeled **Phone Line 1** or **Phone Port** on the cable modem.
The port labeled **Phone Line 2** or **Fax Port** is not always active. You may need to pay extra to your cable provider if you want to activate the second phone port.
- 3 Remove the protective plug from the  port of the printer, and then connect the telephone to the port.

Tips for this setup:

- To make sure that the phone port on the cable modem is active, plug an analog telephone into the phone port, and then listen for a dial tone. If you hear a dial tone, then the port is active.
- If you need two phone ports for your devices but do not want to pay extra, then do not plug the printer into the second phone port. You can use a phone splitter. Plug the phone splitter into the **Phone Line 1** or **Phone Port**, and then plug the printer and telephone into the splitter.

Make sure you use a phone splitter, *not* a line splitter. To make sure that you are using the correct splitter, plug an analog telephone into the splitter and then listen for a dial tone.

Setup 2: Printer is connected to a wall jack; cable modem is installed elsewhere in the house

Follow this setup if your cable provider activated the wall jacks in your house so that you do not have to plug your devices into the cable modem. Your cable telephone service comes from the wall jacks.

To connect:

- 1 Connect the cable from the wall jack to the  port of the printer.
- 2 Remove the protective plug from the  port of the printer, and then connect the telephone to the port.

Scenario 5: Country-specific setup

Different countries have different types of telephone wall jacks. The most common wall jack is the Registered Jack-11 (RJ-11), the standard adopted by most countries. You need to have an RJ-11 plug, or a telephone cable that has an RJ-11 connector, so you can connect a device to an RJ-11 wall jack.

The fax ports on the back of the printer and the telephone cable that comes with the printer have RJ-11 connectors. If you have a different type of connector in your country or region, then you may need to use an RJ-11 adapter.

Connecting the printer to a non-RJ-11 wall jack

To connect:

- 1 Connect one end of a telephone cable to the  port of the printer.
- 2 Connect the other end of the cable to the RJ-11 adapter, and then connect the adapter to the wall jack.
- 3 If you want to connect another device (telephone or answering machine) to the same wall jack, and if the device has a non-RJ 11 connector, then connect it directly to the wall jack.

Notes:

- Do *not* remove the wrap plug from the  port of the printer.
- The printer may not come with an RJ-11 adapter in your country or region.

If the additional device (telephone or answering machine) has an RJ-11 connector, then you can remove the wrap plug and connect the device to the ☎ port of the printer.

Connecting the printer in countries that use serial connection

In some countries or regions, you need to plug all devices into the wall jack. You cannot plug a telephone or answering machine into the ☎ port of the printer. This is called *serial connection*.

Austria	Germany	Portugal
Belgium	Ireland	Spain
Denmark	Italy	Sweden
France	Netherlands	Switzerland
Finland	Norway	United Kingdom

Warning—Potential Damage: If your country is on the list, then do *not* remove the wrap plug from the ☎ port of the printer. It is necessary for the proper functioning of the devices on the telephone line.

To connect:

Connect the cable from the wall jack to the  port of the printer.

Connecting the printer to a wall jack in Germany

The German wall jack has two kinds of ports. The N ports are for fax machines, modems, and answering machines. The F port is for telephones.

Connect the printer to any of the N ports.

To connect:

- 1 Connect one end of a telephone cable to the  port of the printer.
- 2 Connect the other end of the cable to the RJ-11 adapter, and then connect the adapter to an N port.
- 3 If you want to connect a telephone and answering machine to the same wall jack, then connect the devices as shown.

Entering your user information

Your user information includes your name or your company name, your fax number (your fax number is your telephone number, unless you have a dedicated fax telephone line), and the time and date on your fax machine when a transmission is made. This information appears in the header and footer of the faxes that you send.

In some countries, you cannot send a fax without this information. Some fax machines also block faxes without sender information, so make sure that you enter this information in your printer.

Setting the fax header

- 1 From the printer control panel, press .
- 2 Press the arrow buttons to scroll to **Fax Setup**, and then press **OK**.
- 3 Press the arrow buttons to scroll to **Dialing and Sending**, and then press **OK**.
- 4 Press **OK** again to select **Your Fax Name**.
- 5 Enter your name or your company name, and then press **OK**.

- 6 Press the arrow buttons to scroll to **Your Fax Number**, and then press **OK**.
- 7 Enter your fax number or your telephone number, and then press **OK**.

Setting the fax footer

- 1 From the printer control panel, press .
- 2 Press the arrow buttons to scroll to **Fax Printing**, and then press **OK**.
- 3 Press the arrow buttons to scroll to **Fax Footer**, and then press **OK**.
- 4 Press **OK** again to select **On**.
- 5 During the initial setup of your printer, you were prompted to enter the date and time. If you have not entered this information, then do the following:
 - a Press  twice.
 - b Press the arrow buttons to scroll to **Device Setup**, and then press **OK**.
 - c Press the arrow buttons to scroll to **Date/Time**, and then press **OK**.
 - d Enter the date, and then press **OK**.
 - e Enter the time, and then press **OK**.

Configuring the fax settings

You can configure the fax settings through the printer control panel or the fax software. If you configure the fax settings in the printer control panel, then the fax software imports those settings. The changes appear the next time you launch the fax software. The printer also saves the settings that you choose in the fax software, unless you set the printer to block changes made from the computer.

Configuring fax settings using the fax software

Before opening the fax software to configure the fax settings, make sure that:

- The printer is properly connected to the telephone line.
- The printer is turned on and connected to the computer.
- The printer is not in Power Saver mode. If the printer is in Power Saver mode, then press  to wake up the printer.

- 1 Click  or **Start**.
- 2 Click **All Programs** or **Programs**, and then select the printer program folder from the list.
- 3 Click **Printer Home**.
- 4 Click the **Fax** tab, and then click **Set up the printer to fax**.

The Printer Setup Wizard opens.

- 5 Run the Printer Setup Wizard. Make sure you select the correct telephone service and connection. The wizard configures optimal fax settings based on your connection.

Note: If you want to configure the advanced fax settings, then click **Configure the advanced settings** in the Fax tab of the Printer Home. This launches the Fax Setup Utility.

For more information, click **Help** or  to view the help information for the fax software.

Configuring fax settings using the printer control panel

- 1 From the printer control panel, press .
- 2 Press the arrow buttons to scroll to **Fax Setup**, and then press **OK**.
- 3 Configure the fax settings using the selections in the menu:

From here	You can
Address Book	Set up, view, or print the Address Book.
Reports	• Print activity logs. Activity logs let you view the sent and received fax history of your printer. • Print confirmation pages or transmission reports. These reports let you know if the faxes that you send are sent successfully.
Ringing and Answering	• Set the printer to receive faxes automatically or manually. Turn Auto Answer to On or Off. • Adjust the ringing volume. • Set the number of rings. This is important if you choose to receive faxes automatically (Auto Answer On). • Set the distinctive ring. If you subscribe to the distinctive ring feature on your telephone line, then set the correct pattern for the printer in this menu. • Enable fax forwarding. • Set a manual answer code. This is the code you press to receive faxes manually. • Set the Caller ID pattern that you want. Some countries or regions have multiple patterns.
Fax Printing	• Set the printer to print incoming faxes to fit a page. • Set the fax footer.
Dialing and Sending	• Set your fax name and fax number. • Adjust the dialing volume. • Set the dial method, redial time, number of redial attempts, dialing prefix, and fax sending speed. • Convert sent faxes into modes that receiving fax machines recognize. Otherwise, such faxes are aborted. • Enable error correction during transmission. • Set whether the printer scans the original document before or after dialing the recipient. Set the printer to scan before dialing so that you do not have to scan the document again if the fax fails. The scanned document is saved in the printer memory. The printer can then retrieve it and automatically redial the number. If you set the printer to scan after dialing, then the printer does not automatically redial, even when the phone line is busy.
Fax Blocking	Block unwanted incoming faxes.

Creating a contact list

You can create a contact list using the Address Book in the printer control panel or the phone book in the fax software. If you create a contact list in the printer control panel, then the fax software automatically saves those contacts as Phonebook entries. Likewise, when you add contacts to the fax software, the printer automatically saves them to the printer Address Book.

You can save up to 89 contacts and 10 fax groups in the contact list.

Creating a contact list using the fax software

- 1 Click  or **Start**.
- 2 Click **All Programs** or **Programs**, and then select the printer program folder from the list.
- 3 Click **Printer Home**.
- 4 Click the **Fax** tab, and then click **Edit contact list**.
The Contacts tab of the Fax Setup Utility opens.
- 5 Click **Select from phonebook**.
- 6 From the Phonebook field, choose a phone book.
- 7 Select the contact that you want to add, and then click **Add to or change list** to import the contact.

Note: To add contacts, you need to import contacts from the phone books on your computer that are supported by the fax software. In addition to the software Address Book, you may also have phone books of the mail clients installed on your computer, such as Microsoft Outlook.

- 8 Click **OK**.

For more information, click **Help** or  to view the help information for the fax software.

Creating a contact list using the printer control panel

- 1 From the printer control panel, press .
- 2 Press the arrow buttons to scroll to **Fax Setup**, and then press **OK**.
- 3 Press **OK** again to select **Address Book**.
- 4 To add a fax number to your Address Book:
 - a Press the arrow buttons to scroll to **Add Entry**, and then press **OK**.
 - b Use the keypad to enter the contact name in the Name field.
 - c Press the down arrow button to move the cursor to the Number field.
 - d Use the keypad to enter the fax number in the Number field, and then press **OK** to save the entry.
 - e If you want to add another entry, press **OK**, and then repeat steps b through d. You can enter up to 89 fax numbers.
- 5 To add a fax group:
 - a Press the arrow buttons to scroll to **Add Group**, and then press **OK**.
 - b Use the keypad to enter a group name, and then press **OK**.

- c Press the arrow buttons to select whether you want to add a contact manually or import a contact. Press **OK** when you make a selection.
 - If you want to add a contact manually, then use the keypad to enter the fax number, and then press **OK**.
 - If you want to import a contact, then press the arrow buttons to select a contact from the Address Book or the Redial List. Press **OK** when you make a selection.
- d When you are finished adding contacts to the group, select **Done**.

Sending faxes

ADF	Scanner glass
 Use the ADF for multiple-page documents. Note: The ADF is available only on selected models. If you purchased a printer without an ADF, load original documents or photos on the scanner glass.	 Use the scanner glass for single pages, small items (such as postcards or photos), transparencies, photo paper, or thin media (such as magazine clippings).

Tips for sending faxes

Before you send a fax:

- Make sure that the printer is on and connected to a working telephone, DSL, or VoIP line. The line is working if you hear a dial tone.
- Load an original document faceup into the ADF or facedown on the scanner glass.
- When using the ADF, adjust the paper guide on the ADF to the width of the original document.
- When using the scanner glass, close the scanner lid to avoid dark edges on the scanned image.

Sending faxes using the printer control panel

- 1 From the printer control panel, press .
- 2 Enter a fax number, or press **Address Book** to select a number from the Speed Dial or Group Dial list.
- 3 If you want to send a fax to a single recipient, then press **OK**.

If you want to send a fax to a group of numbers (broadcast fax):

- a Press the right arrow button.
- b Enter another number, and then press **OK**.
Repeat steps a through b to add more numbers.

4 Press the **Color/Black** button to select a color or black-and-white fax.

5 Press  to start the fax job.

Warning—Potential Damage: Do not touch the cables or the  and  ports while actively sending a fax.

Tip:

- You can send a broadcast fax to up to 30 recipients.

Sending faxes using the computer

- 1 With a document open, click **File → Print**.
- 2 From the Printer Name menu, select the fax version of your printer, and then click **OK**.
The Send Fax Wizard appears.
- 3 Follow the instructions on the computer screen.

Receiving faxes

Tips for receiving faxes

When receiving faxes:

- Make sure that the printer is on and connected to a working telephone, DSL, or VoIP line. The line is working if you hear a dial tone.
- If you set the printer to receive faxes manually (Auto Answer Off), then make sure that the ringer volume is not set to Off.
- If you have set the printer to receive faxes automatically (Auto Answer On), then load paper in the printer.

Receiving faxes automatically

- 1 Make sure that Auto Answer is on:
 - a From the printer control panel, press .
 - b Press the arrow buttons to scroll to **Fax Setup**, and then press **OK**.
 - c Press the arrow buttons to scroll to **Ring and Answering**, and then press **OK**.
 - d Press **OK** again to select **Auto Answer**.
 - e If Auto Answer is not set to On, press the arrow buttons to scroll to **On**, and then press **OK** to save the setting.
- 2 Set the number of rings before the printer picks up incoming faxes:
 - a Press the arrow buttons to scroll to **Pick Up On**, and then press **OK**.
 - b Press the arrow buttons to scroll to the number of rings that you want, and then press **OK** to save the setting.

When the number of rings you set is detected, the printer automatically receives the incoming fax.

Warning—Potential Damage: Do not touch the cables or the  and  ports while actively receiving a fax.

Tips:

- If the printer is sharing the line with other analog devices (telephone, answering machine), then set the printer to pick up calls two rings after the answering machine. For example, if the answering machine picks up calls after four rings, then set the printer to pick up after six rings. This way, the answering machine picks up calls first and your voice calls are received. If the call is a fax, then the printer detects the fax signal on the line and takes over the call. If the printer is on a dedicated fax line, then you may set the printer to pick up on any number of rings.
- If you have multiple numbers on a single line, or if you subscribe to a distinctive ring service provided by your telephone company, then make sure that you set the correct ring pattern for the printer. Otherwise, the printer will not receive faxes even if you have set it to receive faxes automatically.

Receiving a fax manually

- 1 Turn off Auto Answer:
 - a From the printer control panel, press .
 - b Press the arrow buttons to scroll to **Fax Setup**, and then press **OK**.
 - c Press the arrow buttons to scroll to **Ringing and Answering**, and then press **OK**.
 - d Press **OK** again to select **Auto Answer**.
 - e Press the arrow buttons to scroll to **Off**, and then press **OK**.
- 2 When the telephone rings and you hear fax tones when you pick up the handset, press  on the printer or ***9*** on the telephone attached to the printer.

Warning—Potential Damage: Do not touch the cables or the  and  ports while actively receiving a fax.

Tips:

- The default code for answering faxes manually is ***9***, but for increased security, you can change it to a number that only you know. You can enter up to 7 characters for your code. The valid characters are the digits 0-9 and the characters # and *.
- Make sure that the telephone is plugged into the  port on the back of the printer and that the printer is connected to the wall jack through the  port.

Faxing FAQ

If I skipped the fax setup initially, do I need to run the installer again to set up the fax?

You do not need to run the installer again. You can set up and configure the fax through the fax software that was installed with the printer software.

To set up the fax:

- 1** Connect the printer to the telephone line. For more information, see “Setting up the printer to fax” on page 58.
- 2** Configure the fax settings using the fax software. To access the fax software:
 - a** Click  or **Start**.
 - b** Click **All Programs** or **Programs**, and then select the printer program folder from the list.
 - c** Click **Printer Home**.
The Printer Home opens.
 - d** Click the **Fax** tab, and then click **Set up the printer to fax**.
The Printer Setup Wizard opens.
 - e** Run the Printer Setup Wizard. Make sure you select the correct telephone service and connection. The wizard configures optimal fax settings based on your connection.

What is a splitter and what type of splitter should I use?

If there are limited wall jacks in your home or limited ports on your adapter, then you can use a phone splitter. A splitter splits the telephone signal and allows you to connect multiple devices to the wall jack. It has two or more ports where you can plug the devices. Do *not* use a line splitter.

To make sure that you are using the correct splitter, plug an analog telephone into the splitter and then listen for a dial tone.

What is my fax number?

In most cases, your telephone number is also your fax number. If you subscribe to the Distinctive Ring Pattern Detection (DRPD) service offered by telephone companies, then your fax number is the number that you assigned to the printer. Make sure that you enter the correct distinctive ring pattern for that number in the fax software or in the Fax Setup menu of the printer control panel.

If you have more than one telephone line, then make sure that you enter the number for the line on which the printer is connected.

What is my dialing prefix?

The dialing prefix is the number or series of numbers that you press before you can dial the actual fax number or telephone number. If the printer is in an office setting or in a private branch exchange, this can be a specific number that you need to press so you can make a call outside the office. This can also be a country code or an area code that you need to enter if you are sending faxes outside of town. This can be very useful if you frequently send faxes to the same country or area. When you set the dialing prefix in the utility, you do not need to press the number or series of numbers every time you dial the fax number or telephone number. The printer automatically inputs the prefix every time you dial.

You can enter up to 8 characters as your dialing prefix. The valid characters are the numbers 0-9 and the characters # and *. If you are using the fax software to enter the dial prefix, then you may also include the characters period, comma, star, pound, plus, minus, and parenthesis.

When do I need to set Auto Answer to On?

Set Auto Answer to On if you want the printer to receive faxes automatically.

If the printer is connected to the same telephone line with an answering machine, then you must set Auto Answer to On so that you can receive both your voice calls and your faxes. Make sure that the answering machine is set to pick up on fewer rings than the rings set in the printer. This lets the other devices pick up the voice calls first. If an incoming call is a fax, the printer can detect fax signals on the line and takes the call.

How many rings should I set?

If the printer is sharing a line with an answering machine, then set the printer to pick up on the greater number of rings. Because you have only one line, there is no way of distinguishing a voice call from an incoming fax. You can set the number of rings so that the answering machine takes the voice calls and the printer takes the incoming faxes. If you set the other devices to pick up on fewer rings, then the devices pick up calls first, and your voice calls are received. If a call is a fax, then the printer can detect it and will take over the call.

If the printer is on a dedicated fax line, then you may set the printer to pick up on any number of rings that you want.

How do I set the distinctive ring for the printer?

Setting the correct ring is important if you subscribe to the Distinctive Ring Pattern Detection (DRPD) feature offered by telephone companies. This feature allows you to have multiple telephone numbers on one telephone line. Each telephone number has a designated ring pattern (a single ring, a double ring, a triple ring). The different ring patterns let you know what telephone number was dialed, and what device you should use to answer the call.

Assign one of your telephone numbers to the printer as the fax number, and then set the printer to answer the ring pattern of that number. If the pattern is set incorrectly, then the printer rings, but it never receives the fax.

To set the ring pattern in the printer:

- 1 From the printer control panel, press .
- 2 Press the arrow buttons to scroll to **Fax Setup**, and then press **OK**.
- 3 Press the arrow buttons to scroll to **Ring and Answering**, and then press **OK**.
- 4 Press the arrow buttons to scroll to **Ring Pattern**, and then press **OK**.
- 5 Press the arrow buttons to select the ring pattern for the printer, and then press **OK**.

Distinctive Ring is also called Ident-a-Call, Smart Ring, Teen Ring, RingMaster, and Identaring.

How can I check the dial tone?

A dial tone lets you know if the telephone line is working or if the printer is properly connected to the telephone line. If you encounter problems sending and receiving faxes, then make sure you can hear a dial tone on the line and through the printer.

Make sure the telephone line and the wall jack are working

- 1 Plug an analog telephone into the wall jack.
- 2 Listen for a dial tone through the telephone handset.

If you hear a dial tone, then the telephone line and the wall jack are working.

If you do not hear a dial tone, plug the analog telephone into a second wall jack, and then listen for a dial tone.

If you hear a dial tone, then the telephone line is working but the first wall jack is not working.

Make sure the printer is connected properly to the telephone line

- 1 While the printer is connected to a telephone line through the  port on the back of the printer, plug an analog telephone into the  port of the printer.
- 2 Listen for a dial tone.

If you hear a dial tone, then the telephone line is working and properly connected to the printer.

If you do not hear a dial tone through both the wall jack and the printer, then see the “Fax troubleshooting checklist” on page 121.

How do I adjust the speaker volume on the printer?

Listen to the dial tone to check if the telephone line is working and to check if the cables and devices are connected properly in your telephone network. Make sure that the dialing volume is not set to Off, especially if you are dialing a number on hook. If you set the printer to receive faxes manually, then make sure that you set the ringer volume loud enough for you to hear it.

Adjusting the dialing volume

- 1 From the printer control panel, press .
- 2 Press the arrow buttons to scroll to **Fax Setup**, and then press .
- 3 Press the arrow buttons to scroll to **Dialing and Sending**, and then press .
- 4 Press the arrow buttons to scroll to **Dial Volume**, and then press .
- 5 Press the arrow buttons to select a dial volume setting, and then press .

Adjusting the ringer volume

- 1 Press  to scroll back to the Fax Setup menu, and then press .
- 2 Press the arrow buttons to scroll to **Ring and Answering**, and then press .
- 3 Press the arrow buttons to scroll to **Ringer Volume**, and then press .
- 4 Press the arrow buttons to select a ringer volume setting, and then press .

How can I make sure that the fax answers the call before the answering machine?

To make sure the printer picks up incoming faxes, set Auto Answer to On, and then set the printer to pick up after a greater number of rings than the answering machine. For example, if the answering machine picks up calls after four rings, then set the printer to pick up after five rings. This way, the answering machine picks up calls first and your voice calls are received. If the call is a fax, then the printer detects the fax signal on the line and takes over the call.

What settings work best with digital voice mail?

Voice mail and fax can share the same telephone line if you subscribe to a distinctive ring service. This feature allows you to have multiple telephone numbers on one telephone line. Each telephone number has a designated ring pattern (a single ring, a double ring, a triple ring). The different ring patterns let you know which telephone number was dialed, and which device you should use to answer the call.

If you do not have distinctive ring service, then set the printer to receive faxes manually (Auto Answer Off). This setting lets you receive both voice calls and fax calls, but works best if you use voice mail more often. You need to turn off voice mail whenever you are expecting a fax.

How do I change the resolution of the documents that I fax?

The resolution, or fax quality, of the documents that you send may affect fax transmission. The receiving fax machine may not support high resolutions and may not be able to receive your fax. You can fix this by enabling Auto Fax Conversion, but the automatic conversion may result in an unreadable fax, especially if the original document is already blurred.

Choose a fax quality that best suits the capacity of the receiving fax machine and the quality of the original document.

Quality	Black resolution	Color resolution
Standard	200 x 100	200 x 200
Fine	200 x 200	200 x 200
Superfine	300 x 300	200 x 200
Ultrafine	300 x 300 (half-toned)	200 x 200

When sending a fax, after entering the fax number, press the arrow buttons to select a fax quality, and then press **OK**.

How do I send a fax at a scheduled time?

- 1 From the printer control panel, press .
- 2 Enter the fax number of the recipient, or press **Address Book** to select a number from the Speed Dial or Group Dial list.
- 3 If you want to send the fax to a single recipient, then press **OK**.
If you want to send a fax to a group of numbers (broadcast fax), then press the arrow buttons to scroll to **Yes**, and then press **OK**.
- 4 Press **OK** to scroll to **Schedule Fax**.
- 5 Press the arrow buttons to scroll to **Send Later**, and then press **OK**.
- 6 Enter the time you want to send the fax, and then press **OK**.
- 7 Press  to start scanning the document.
- 8 If the printer is not set to the 24-hour mode, press the arrow buttons to select **AM** or **PM**, and then press **OK**.
- 9 Press  to save the scheduled fax.
The printer sends the fax at the designated time. Do *not* turn off the printer or unplug it from the telephone line before the scheduled time.

How do I send a fax using a phone calling card?

- 1 Press **Dialtone**.
You should hear the dial tone of the telephone line.
- 2 Enter the calling card information, and then when you are connected to the telephone carrier, follow the prompts.

- 3 When prompted, enter the fax number of the recipient, and then press .

How do I know that the fax was sent successfully?

You can set the printer to print a confirmation page, or transmission report, every time you send a fax. This report includes the date and time that the fax was sent. If the fax job is unsuccessful, then the report also includes the cause of the error.

- 1 From the printer control panel, press .
- 2 Press the arrow buttons to scroll to **Fax Setup**, and then press **OK**.
- 3 Press the arrow buttons to scroll to **Reports**, and then press **OK**.
- 4 Press the arrow buttons to scroll to **Confirmation**, and then press **OK**.
- 5 Press the arrow buttons to select a report printing option:
 - If you want to print a report every time you send a fax, then select **For All** or **Print for All**.
 - If you want to save on ink and print a report only when a fax job is unsuccessful, then select **On Error**.
- 6 Press **OK**.

How do I view the fax history of the printer?

You can view the fax history of the printer on the display. You can also print reports of sent and/or received faxes.

- 1 From the printer control panel, press .
- 2 Press the arrow buttons to scroll to **Fax Setup**, and then press **OK**.
- 3 Press the arrow buttons to scroll to **Reports**, and then press **OK**.
 - To view the fax history on the display, press **OK** again.
 - To print sent fax history only, press the arrow buttons to scroll to **Print Send Log**, and then press **OK**.
 - To print received fax history only, press the arrow buttons to scroll to **Print Receive Log**, and then press **OK**.
 - To print sent and received fax history, press the arrow buttons to scroll to **Print Activity Report**, and then press **OK**.

How do I print a fax on both sides of the paper?

- 1 From the printer control panel, press .
- 2 Press the arrow buttons to scroll to **Fax Setup**, and then press **OK**.
- 3 Press the arrow buttons to scroll to **Fax Printing**, and then press **OK**.
- 4 Press the arrow buttons to scroll to **2-Sided Faxes**, and then press **OK**.
- 5 Press the arrow buttons to select a duplex setting:
 - **Use Button Setting**—Incoming faxes are printed on both sides of the paper if the 2-Sided button on the printer control panel is set to On.
 - **Always**—Incoming faxes are printed on both sides of the paper regardless of the 2-Sided button setting.
- 6 Press **OK** to save the setting.

How do I forward a fax?

- 1 From the printer control panel, press .
- 2 Press the arrow buttons to scroll to **Fax Setup**, and then press **OK**.
- 3 Press the arrow buttons to scroll to **Ringing and Answering**, and then press **OK**.
- 4 Press the arrow buttons to scroll to **Fax Forward**, and then press **OK**.
- 5 Press the arrow buttons to scroll to **Forward** or **Print & Forward**, and then press **OK**.
- 6 Using the keypad, enter the number to which you want to forward the fax, and then press **OK**.

When you enable this option, all the faxes that you receive are automatically forwarded until you disable it.

To disable fax forwarding, return to the Fax Forward menu, and then select **Off**.

Can I block faxes?

You can block faxes from specific numbers. You can also block junk faxes and faxes from unidentified senders (senders without a Caller ID). This feature is helpful if you want to receive faxes automatically but want to filter the faxes that you receive.

- 1 Turn on fax blocking.
 - a From the printer control panel, press .
 - b Press the arrow buttons to scroll to **Fax Setup**, and then press **OK**.
 - c Press the arrow buttons to scroll to **Fax Blocking**, and then press **OK**.
 - d Press the arrow buttons to scroll to **Turn On/Off**, and then press **OK**.
 - e Press the arrow buttons to scroll to **On**, and then press **OK** to save the setting.
- 2 Add a number to block.
 - a Press the arrow buttons to scroll to **Add**.
 - b Press **OK**.
 - c Use the keypad to enter the fax number, and then press **OK** to save.
 - d Use the keypad to enter the name of the person that you want to block.
 - e Repeat steps 2b through 2d until you have added all the numbers that you want to block. You can block up to 50 numbers.
- 3 Block unidentified faxes (faxes without a Caller ID number).
 - a Press the arrow buttons to scroll to **Block No-ID**, and then press **OK**.
 - b Press the arrow buttons to scroll to **On**, and then press **OK** to save the setting.

Can I retrieve failed faxes?

The printer saves an incoming fax to the printer memory before it prints the fax. If the printer runs out of ink or runs out of paper, then you can print the fax later after resolving the error. The printer prompts you if there are faxes to be printed.

If an incoming fax or an outgoing fax fails due to power loss, then the printer automatically prints an error report the next time it is turned on. For incoming faxes, the error report lets you know who sent the fax and how many pages were not printed. For outgoing faxes, it lets you know how many pages were not sent. Faxes lost due to power loss are not retrievable.

Networking

Installing the printer on a wireless network

Wireless network compatibility

Your printer contains an IEEE 802.11n wireless print server. Your printer is compatible with IEEE 802.11 b/g/n routers that are Wi-Fi certified.

Supported network security options

The printer supports three wireless security options: no security, WEP, and WPA/WPA2.

No Security

It is not recommended to use no security at all on a home wireless network. Using no security means that anyone within range of your wireless network can use your network resources—including Internet access, if your wireless network is connected to the Internet. The range of your wireless network may extend far beyond the walls of your home, allowing access to your network from the street or from your neighbors' homes.

WEP

WEP (Wired Equivalent Privacy) is the most basic and the weakest type of wireless security. WEP security relies on a series of characters called the WEP key.

Every device on the wireless network must use the same WEP key. WEP security can be used on both ad hoc and infrastructure networks.

A valid WEP key has:

- Exactly 10 or 26 hexadecimal characters. Hexadecimal characters are A–F, a–f, and 0–9
- or*
- Exactly 5 or 13 ASCII characters. ASCII characters are letters, numbers, punctuation, and symbols found on a keyboard.

WPA/WPA2

WPA (Wi-Fi Protected Access) and WPA2 (Wi-Fi Protected Access 2) offer stronger wireless network security than WEP. WPA and WPA2 are similar types of security. WPA2 uses a more complex encryption method and is more secure than WPA. Both WPA and WPA2 use a series of characters, called the WPA pre-shared key or passphrase, to protect wireless networks from unauthorized access.

A valid WPA passphrase has:

- From 8 to 63 ASCII characters. ASCII characters in a WPA passphrase are case-sensitive.
- or*
- Exactly 64 hexadecimal characters. Hexadecimal characters are A–F, a–f, and 0–9.

Every device on the wireless network must use the same WPA passphrase. WPA security is an option only on infrastructure networks with wireless access points and network cards that support WPA. Most newer wireless network equipment also offers WPA2 security as an option.

Note: If your network uses WPA or WPA2 security, then select **WPA Personal** when you are prompted to select the type of security your network uses.

Printing a network setup page

A *network setup page* lists the configuration settings of the printer, including the IP address and MAC address of the printer.

- 1 Load plain paper.
 - 2 From the printer control panel, press .
 - 3 Press the arrow buttons to scroll to **Network Setup**, and then press .
 - 4 Press  to select **Print Setup Page**.
- The network setup page prints.

Information you will need to set up the printer on a wireless network

To set up the printer for wireless printing, you need to know:

- The name of your wireless network. This is also known as the *Service Set Identifier* (SSID).
- If encryption was used to secure your network.
- The security key (either a WEP key or WPA passphrase) that allows other devices to communicate on the network if encryption was used to secure your network.

You can locate your network WEP key or WPA passphrase by accessing your wireless access point or router and checking the security information.

If your wireless access point (wireless router) is using *Wired Equivalent Privacy* (WEP) security, the WEP key should be:

- Exactly 10 or 26 hexadecimal characters. Hexadecimal characters are A–F, a–f, and 0–9.
- or
- Exactly 5 or 13 ASCII characters. ASCII characters are letters, numbers, punctuation, and symbols found on a keyboard.

If your wireless access point is using *Wi-Fi Protected Access* (WPA) security, the WPA passphrase should be:

- From 8 to 63 ASCII characters. ASCII characters in a WPA passphrase are case-sensitive.
- or
- Exactly 64 hexadecimal characters. Hexadecimal characters are A–F, a–f, and 0–9.

If your wireless network is not using security, then you will not have a security key.

Note: If you do not know the SSID of the network that your computer is connected to, launch the wireless utility of the computer network adapter and look for the network name. If you cannot find the SSID or the security information for your network, see the documentation that came with the wireless access point, or contact your system support person.

Installing the printer on a wireless network

Before you install the printer on a wireless network, make sure that:

- Your wireless network is set up and working properly.
- The computer you are using is connected to the same wireless network where you want to set up the printer.

1 Close all open software programs.

2 Insert the installation software CD.

If the Welcome screen does not appear after a minute, then launch the CD manually:

- a** Click , or click **Start** and then click **Run**.
- b** In the Start Search or Run box, type **D:\setup.exe**, where **D** is the letter of your CD or DVD drive.

3 Follow the instructions on the Welcome screen to set up the printer.

Installing the printer on other computers

Once the printer is set up on the wireless network, it can be accessed wirelessly by any other computer on the network. However, you will need to install the printer driver on every computer that will access it. You do not need to configure the printer again, although you will need to run the setup software on each computer to install the driver.

1 Close all open software programs.

2 Insert the installation software CD.

If the Welcome screen does not appear after a minute, then launch the CD manually:

- a** Click , or click **Start** and then click **Run**.
- b** In the Start Search or Run box, type **D:\setup.exe**, where **D** is the letter of your CD or DVD drive.

3 Follow the instructions on the computer screen for installing a configured printer on a new computer.

Interpreting the colors of the Wi-Fi indicator light

The colors of the Wi-Fi indicator light show the network status of the printer.

- **Off** means one of the following:
 - The printer is turned off or is powering up.
 - The printer is not connected to a wireless network and is in Power Saver mode. In Power Saver mode, the power light pulses on and off.
- **Solid orange** means one of the following:
 - The printer has not yet been configured for a wireless network.
 - The printer is configured for an ad hoc connection, but it is not currently communicating with another ad hoc device.
- **Blinking orange** means one of the following:
 - The printer is out of the range of the wireless access point (wireless router).
 - The printer is trying to communicate with the wireless access point, but the wireless access point is turned off or not working properly.
 - Either the configured printer or the wireless access point has been turned off and back on, and the printer is trying to establish communications with the network.
 - The wireless settings of the printer may no longer be valid.
- **Green** means that the printer is connected to a wireless network and is ready for use.

Special wireless installation instructions

The following instructions apply to customers outside of North America who are using a wireless broadband box. Some examples of these boxes include LiveBox, AliceBox, N9UF Box, FreeBox, and Club Internet.

Before you begin

- Make sure your box is wireless-enabled and activated to work on a wireless network. For more information about configuring the box to work wirelessly, see the documentation that came with your box.
- Make sure your box is turned on and that your computer is on and connected to your wireless network.

Adding the printer to your wireless network

- 1 Set up your printer for wireless networking using the setup instructions provided.

Stop when you are prompted to select a network.

- 2 If there is an association/registration button on the back of your box, press it before selecting a network.

Note: After pressing the association/registration button, you have five minutes to complete the printer installation.

- 3 Return to the computer screen.

From the list that appears in the “Choose your wireless network” dialog, select your network, and then click **Continue**.

If your wireless network does not appear in the list:

a Select **Unlisted Network**, and then click **Continue**.

b Enter the details about your wireless network.

Note: Your WEP, WPA, or WPA2 key may be obtained from the bottom of the box, the user’s guide that came with the box, or from the box Web page. If you have already changed the key for your wireless network, use the key you created.

- 4 Follow the instructions on your screen to complete installation.

Assigning a static IP address

The printer will be assigned an IP address automatically through DHCP on most wireless networks.

If you want to assign a static IP address to your printer, do the following:

- 1 Complete the wireless setup, allowing the printer to receive a DHCP address from a DHCP server on the network.
- 2 Print a network setup page to see what IP address is currently assigned to the printer.
- 3 Open a Web browser and then type the printer IP address in the address field. Press **Enter**.
The printer Web page loads.
- 4 Click the **Configuration** link.
- 5 Click the **TCP/IP** link.
- 6 Click the **Set Static IP Address** link.

7 Type the IP address you want to assign to the printer in the **IP Address** field.

8 Click the **Submit** button.

The Submitting Selection message appears.

To confirm that the address was successfully assigned, type the static IP address in the Web browser address field and then press **Enter**. The printer Web page loads if the address was successfully assigned.

For more information, contact your system support person.

Changing wireless settings after installation

To change wireless settings on the printer, such as the configured network, the security key, or other settings, do the following:

- 1** Click  or **Start**.
- 2** Click **All Programs** or **Programs**, and then select the printer program folder from the list.
- 3** Select **Printer Home**.
- 4** Click the **Settings** tab.
- 5** Click the **Wireless setup utility** link.
- 6** Follow the instructions on the computer screen to configure the printer for wireless access with the new settings.

Advanced wireless setup

Creating an ad hoc wireless network

The recommended way to set up your wireless network is to use a wireless access point (wireless router). A network set up this way is called an *infrastructure network*. If you have an infrastructure network, you should configure the printer for use on that network.

Note: The printer can communicate on only one wireless network at a time. Configuring the printer for an ad hoc wireless network will keep it from working on any other wireless network, either ad hoc or infrastructure.

You can set up an ad hoc network if you:

- Do not have an access point or wireless router
- Do not already have a wireless network (but do have a wireless adapter for your computer)
- Want to set up a standalone network between the printer and a computer with a wireless network adapter

In Windows Vista

- 1** Click .
- 2** Click **Control Panel**.
- 3** Click **Network and Internet**.
- 4** Under Network and Sharing Center, click **Connect to a network**.
- 5** Click **Set up a connection or network** when you are prompted to select a network to connect to.

6 Click **Set up a wireless ad-hoc (computer-to-computer) network**, when you are prompted to choose a connection option, and then click **Next**.

7 Follow the instructions in the “Set up a wireless ad hoc network” wizard. As part of the setup:

- a** Create a network name or SSID for the network between the computer and your printer.
- b** Write down the name of your network. Be sure to use the exact spelling and capitalization.
- c** Go to the Security Type list, select **WEP**, and then create a WEP key.

WEP keys must be:

- Exactly 10 or 26 hexadecimal characters. Hexadecimal characters are A-F, a-f, and 0-9.
or
- Exactly 5 or 13 ASCII characters. ASCII characters are letters, numbers, and symbols found on a keyboard

d Write down the password for your network. Be sure to use the exact spelling and capitalization.

Windows Vista will enable the ad hoc network for you. It will appear in the “Connect to a network” dialog under “Available networks,” indicating that the computer is configured for the ad hoc network.

8 Close the Windows Control Panel and any remaining windows.

9 Insert the installation software CD, and follow the directions for wireless installation.

Note: Do not connect the installation or network cables until instructed to do so by the setup software.

10 When the available networks are displayed, provide the network name and the security information you created in step 6. The installer will configure the printer for use with your computer.

11 Store a copy of your network name and security information in a safe place for future reference.

Note: You may need to reconnect Windows Vista computers to the ad hoc network after restarting.

In Windows XP

1 Click **Start**.

2 Click **Control Panel**.

3 Click **Network and Internet Connections**.

4 Click **Network Connections**.

5 Right-click the icon for your wireless network connection.

6 Click **Enable**, if it appears in the pop-up menu.

Note: If Disable appears, your wireless connection is already enabled.

7 Right-click the **Wireless Network Connection** icon.

8 Click **Properties**.

9 Click the **Wireless Networks** tab.

Note: If the Wireless Networks tab does not appear, your computer has third-party software that controls your wireless settings. You must use that software to set up the ad hoc wireless network. For more information, see the documentation for the third-party software to learn how to create an ad hoc network.

10 Select the **Use Windows to configure my wireless network settings** check box.

- 11 Under Preferred Networks, delete any existing networks.
 - a Select the network to be removed.
 - b Click **Remove** to delete the network from the list.
- 12 Click **Add** to create an ad hoc network.
- 13 In the Network Name (SSID) box, type the name you want to give your wireless network.
- 14 Write down the network name you chose so you can refer to it when running the wireless setup. Be sure to use the exact spelling and capitalization.
- 15 If Network Authentication appears in the list, select **Open**.
- 16 In the "Data encryption" list, select **WEP**.
- 17 If necessary, clear the "The key is provided for me automatically" check box.
- 18 In the Network Key box, type in a WEP key.
- 19 Write down the WEP key you chose so you can refer to it when running the wireless setup. Make sure you copy it down exactly, including any capital letters.
- 20 In the "Confirm network key" box, type the same WEP key.
- 21 Select **This is a computer-to-computer (ad hoc) network; wireless access points are not used**.
- 22 Click **OK** twice to close the two open windows.
- 23 It may take a few minutes for your computer to recognize the new settings. To check on the status of your network:
 - a Right-click the **Wireless Network Connections** icon.
 - b Select **View Available Wireless Networks**.
 - If the network is listed but the computer is not connected, select the ad hoc network and then click **Connect**.
 - If the network does not appear, wait a minute and then click **Refresh network list**.
- 24 Insert the installation software CD, and follow the directions for wireless installation.

Note: Do not connect the installation or network cables until instructed to do so by the setup software.
- 25 When the available networks are displayed, provide the network name and the security information you created beginning in step 13. The installer will configure the printer for use with your computer.
- 26 Store a copy of your network name and security information in a safe place for future reference.

In Windows 2000

- Refer to the documentation that came with your wireless network adapter for information on configuring an ad hoc network with Windows 2000.

Adding a printer to an existing ad hoc wireless network

Note: The printer can communicate on only one wireless network at a time. Configuring the printer for an ad hoc wireless network will remove it from any other wireless network, either ad hoc or infrastructure, for which it is configured.

- 1 Click  or **Start**.
- 2 Click **All Programs** or **Programs**, and then select the printer program folder from the list.

- 3 Select **Printer Home**.
- 4 Click the **Settings** tab.
- 5 Click **Wireless setup utility** link.
- 6 Follow the instructions on the computer screen.

Note: Windows Vista computers may need to be reconnected to the ad hoc network after restarting.

Configuring the printer wirelessly using WPS (Wi-Fi Protected Setup)

Wi-Fi Protected Setup (WPS) is a method of configuring computers and printers on a secure wireless network. WPS is faster than manual configuration, and it reduces typing errors when new devices are added to a wireless network. The SSID and WPA passphrase are automatically detected and configured for you. The printer supports WPS and can be configured for wireless access using WPS. In order to use WPS to configure the printer, the wireless router must also support WPS.

If you want to use WPS to set up your printer, then insert the CD and follow the instructions on the computer screen.

Notes:

- To use WPS to configure the printer wirelessly, all of the devices on your wireless network must support WPS. If any device on your network does not support WPS, then you must type the SSID and security information when prompted.
- If you are using the PIN method to add your printer using WPS, make sure you type all eight digits when you are asked to enter your PIN.

Switching between USB, Ethernet, and wireless connections (Windows only)

You can change the way you access your printer, depending on your needs. The following procedures assume that you have configured your printer for one type of connection and that the printer drivers are installed on the computer. See related topics on troubleshooting specific connection types if you encounter difficulties during configuration.

Note: The printer supports one active local connection (USB) and one active network connection (Ethernet or wireless) at a time. It is not possible to use both Ethernet and wireless at the same time.

Using the printer wirelessly

Select the connection type that describes how you currently access your printer:

If the printer is currently set up locally (using USB connection)

- 1 Click  or **Start**.
- 2 Click **All Programs** or **Programs**, and then select the printer program folder from the list.
- 3 Select **Printer Home**.
- 4 Click the **Settings** tab.

5 Click the **Wireless setup utility** link.

6 Follow the instructions on the computer screen to set up the printer wirelessly.

Note: There is no need to remove the USB cable connecting the printer to the computer during wireless configuration.

If the printer is currently set up for Ethernet

1 Unplug the Ethernet cable from the printer.

2 Place the printer close to the computer you want to use to configure the printer for wireless access.

Note: You will need to connect the printer to the computer with a USB cable. Make sure the printer is close enough to the computer for your USB cable to reach both.

3 Click  or **Start**.

4 Click **All Programs** or **Programs**, and then select the printer program folder from the list.

5 Select **Printer Home**.

6 Click the **Settings** tab.

7 Click the **Wireless setup utility** link.

8 Follow the instructions on the computer screen to set up the printer wirelessly.

Using the printer locally (USB)

Select the connection type that describes how you currently access your printer:

If the printer is currently set up for Ethernet

1 Attach a USB cable to the computer and to the printer.

2 Wait for a moment for Windows to locate the driver and finish setting up the printer.

3 Select the USB printer (see "Selecting the printer" on page 91).

If the printer is currently set up for wireless

1 Attach a USB cable to the computer and to the printer.

2 Wait a moment for Windows to locate the driver and finish setting up the printer.

3 Select the USB printer (see "Selecting the printer" on page 91).

Note: You can continue to use the printer through Ethernet or wireless connection.

Using the printer over an Ethernet network

Select the connection type that describes how you currently access your printer:

If the printer is currently set up for wireless

1 Plug an Ethernet cable into the printer and into an available port on a switch or wall jack.

2 Wait for a minute for the Ethernet network interface to become active and acquire an IP address from the network.

3 Select the Network printer (see "Selecting the printer" on page 91).

Note: The wireless interface of the printer is disabled while it is connected to an Ethernet network.

If the printer is currently set up locally (using USB connection)

- 1 Plug an Ethernet cable into the printer and into an available port on a switch or wall jack.
- 2 Insert the software and installation CD into the computer you want to use to configure the printer.
- 3 Follow the instructions on the computer screen for configuring a printer on an Ethernet network.
- 4 Select the Network printer (see “Selecting the printer” on page 91).

Note: You will need a USB cable to complete the configuration.

Selecting the printer

- 1 Click  or **Start**.
- 2 In the Start Search or Run box, type **control printers**.
- 3 Press **Enter**, or click **OK**.
The printer folder opens.
- 4 Right-click the printer you want to use, either Network or USB.
- 5 Select **Set as Default Printer** from the menu.
- 6 Close the Printers or Printers and Faxes window.

Sharing a printer in a Windows environment

- 1 Prepare the computers to share the printer:
 - a Make all computers printing to the printer accessible through Network Neighborhood by enabling File and Print Sharing. See the Windows documentation for instructions on enabling File and Print Sharing.
 - b Install the printer software on all computers that will print to the printer.
- 2 Identify the printer:
 - a On the computer that is attached to the printer, do one of the following:
 - 1 Click , or click **Start** and then click **Run**.
 - 2 In the Start Search or Run box, type **control printers**.
 - 3 Press **Enter**, or click **OK**.
The printer folder opens.
 - b Right-click the name of your printer.
 - c Click **Sharing**.
 - d From the Sharing tab, select **Share this printer** or **Shared as**, and then assign a distinctive name.
 - e Click **OK**.
- 3 Locate the printer from the remote computer:

Note: The remote computer is the one that is not attached to the printer.

- a Do one of the following:
 - 1 Click , or click **Start** and then click **Run**.
 - 2 In the Start Search or Run box, type **control printers**.
 - 3 Press **Enter**, or click **OK**.
The printer folder opens.

- b** Right-click the name of your printer.
- c** Click **Properties**.
- d** Click the **Ports** tab, and then click **Add Port**.
- e** Select **Local Port**, and then click **New Port**.
- f** Type the **Universal Naming Convention (UNC) Port name**, which consists of the server name and the distinctive printer name that was specified in step 2 on page 91. The name should be in the form `\\server\printer`.
- g** Click **OK**.
- h** Click **Close** on the Printer Ports dialog.
- i** Make sure the new port is selected on the Ports tab, and then click **Apply**.
The new port is listed with the printer name.
- j** Click **OK**.

Installing the printer on an Ethernet network

Information you will need to set up the printer on an Ethernet network

To configure your printer for an Ethernet network, organize the following information before you begin:

Note: If your network automatically assigns IP addresses to computers and printers, continue on to installing the printer.

- A valid, unique IP address for the printer to use on the network
- The network gateway
- The network mask
- A nickname for the printer (optional)

Note: A printer nickname can make it easier for you to identify your printer on the network. You can choose to use the default printer nickname, or assign a name that is easier for you to remember.

You will need an Ethernet cable to connect the printer to the network and an available port where the printer can physically connect to the network. Use a new network cable when possible to avoid potential problems caused by a damaged cable.

Installing the printer on an Ethernet network

Before you install the printer on an Ethernet network, make sure that:

- You have completed the initial setup of the printer.
- Your network is set up and working properly.
- Your computer is connected to your network.

1 Close all open software programs.

2 Insert the installation software CD.

If the Welcome screen does not appear after a minute, do one of the following:

- a** Click , or click **Start** and then click **Run**.
 - b** In the Start Search or Run box, type **D:\setup.exe**, where **D** is the letter of your CD or DVD drive.
- 3** Follow the instructions on the computer screen to set up the printer, selecting **Ethernet connection** when you are prompted to select a connection type.

Networking FAQ

What is Wi-Fi Protected Setup?

Wi-Fi Protected Setup (WPS) is a product certification that provides simple and secure configuration. WPS assists users in establishing wireless home networks and enabling network security without requiring prior knowledge of Wi-Fi technology. WPS configures the network name (SSID) and WPA passphrase for network devices. WPS only supports networks that communicate through access points or routers and is not applicable in ad hoc networks.

We support the following methods in adding new wireless network devices:

- *Personal Identification Number (PIN)*—A PIN from the new device is entered into the access point.
- *Push Button Configuration (PBC)*—The user pushes a button on both the access point and the new device.

Look for any of these identifier marks to check if your device is WPS certified:

You can find these WPS logos on the side, back, or top of your access point or router.

Where do I find my WEP key or WPA passphrase?

To find the WEP key or WPA passphrase for the wireless network, view the security settings on the access point or wireless router. Most access points have a Web page that can be accessed using a Web browser.

You can also check the manual that came with your access point or router. If your access point or router is using the default settings, you can find the information in the manual. If someone else set up your network for you, that person or company may have included the information in the manual.

If you do not know how to access the Web page, or if you do not have administrator access to the wireless access point on your network, and are unable to locate the information in the manual, contact your system support person.

What is an SSID?

A Service Set Identifier (SSID) is the name that identifies a wireless network. All devices on the network must know the SSID of the wireless network or they will not be able to communicate with each other. Usually, the wireless network broadcasts the SSID to allow wireless devices in the area to connect to it. Sometimes, the SSID is not broadcast for security reasons.

If the SSID of your wireless network is not broadcast, it cannot be detected automatically and will not show up in the list of available wireless networks. You must enter the network information manually in this situation.

An SSID can contain up to 32 alphanumeric characters.

Where do I find my SSID?

You can find the SSID for the wireless network by viewing the settings on the access point or wireless router. Most access points have a built-in Web server that can be accessed using a Web browser.

Many network adapters provide a software application that allows you to view the wireless settings of your computer, including your SSID. Check your computer to see if a program was installed with your network adapter.

If you are unable to locate your SSID using either of these methods, contact your system support person.

What is a network?

A network is a collection of devices such as computers, printers, Ethernet hubs, wireless access points, and routers connected together for communication through cables or through a wireless connection. A network can be wired, wireless, or designed to have both wired and wireless devices.

Devices on a wired network use cables to communicate with each other.

Devices on a wireless network use radio waves instead of cables to communicate with each other. For a device to be able to communicate wirelessly, it must have a wireless network adapter attached or installed that lets it receive and transmit radio waves.

How do I find out what type of security my network is using?

You must know the WEP key or WPA passphrase and the type of security (WEP, WPA, or WPA2) used on the wireless network. To obtain this information, see the documentation that came with your wireless access point (wireless router), see the Web page associated with the wireless access point, or consult your system support person.

Note: The WEP key or WPA passphrase is not the same as the password for the wireless access point. The password allows you to access the wireless access point settings. The WEP key or WPA passphrase allows printers and computers to join your wireless network.

How are home networks configured?

For desktop computers, laptops, and printers to communicate with each other over a network, they must be connected by cables and/or have wireless network adapters built in or installed in them.

There are many different ways a network can be set up. Five common examples appear below.

Note: The printers in the following diagrams represent printers with internal print servers built in to them so that they can communicate over a network.

Wired network example

- A desktop computer, a laptop, and a printer are connected by Ethernet cables to a hub, router, or switch.
- The network is connected to the Internet through a DSL or cable modem.

Wireless network examples

Scenario 1: Mixed wired and wireless connections on a network with Internet access

- All computers and printers connect to the network through a router with Ethernet and wireless capabilities.
- Some computers and printers connect wirelessly to the router; others connect over a wired connection.
- The network is connected to the Internet through a DSL or cable modem.

Scenario 2: Wireless network with Internet access

- All computers and printers connect to the network using a wireless access point or wireless router.
- The wireless access point connects the network to the Internet through a DSL or cable modem.

Scenario 3: Wireless network with no Internet access

- Computers and printers connect to the network using a wireless access point.
- The network has no connection to the Internet.

Scenario 4: Computer connected wirelessly to a printer without Internet access

- A computer is directly connected to a printer without going through a wireless router.
- This configuration is referred to as an ad hoc network.
- The network has no connection to the Internet.

Note: Most computers can connect to only one wireless network at a time. If you access the Internet over a wireless connection, you will lose Internet access if you are connect to an ad hoc network.

Why do I need an installation cable?

When setting up the printer on your wireless network, the printer will need to temporarily connect to a computer using the installation cable. This temporary connection is used to set up the wireless settings of the printer.

The installation cable connects to a rectangular USB port on the installing computer and the square USB port on the printer.

How do I attach the installation cable?

The installation cable attaches to a USB port on the computer and to the square connector on the back of the printer. This connection allows you to configure the printer for a networked or locally attached installation.

- 1 Attach the large, rectangular connector to any USB port on your computer. USB ports may be on the front or the back of the computer, and may be horizontal or vertical.

- 2 Attach the small, square connector to the printer.

- 3 Continue following the on-screen instructions.

How are infrastructure and ad hoc networks different?

Wireless networks can operate in one of two modes: infrastructure or ad hoc.

In *infrastructure* mode, all devices on a wireless network communicate with each other through a wireless router (wireless access point). Devices on the wireless network must have valid IP addresses for the current network and share the same SSID and channel as the wireless access point.

In *ad hoc* mode, a computer with a wireless network adapter communicates directly with a printer equipped with a wireless print server. The computer must have a valid IP address for the current network and be set to ad hoc mode. The wireless print server must be configured to use the same SSID and channel that the computer is using.

The following table compares the characteristics and requirements of the two types of wireless networks.

	Infrastructure	Ad hoc
Characteristics		
Communication	Through wireless access point	Directly between devices
Security	More security options	WEP or no security
Range	Determined by range and number of wireless access points	Restricted to range of individual devices on network
Speed	Usually faster	Usually slower
Requirements for all devices		
Unique IP address for each device	Yes	Yes
Mode set to	Infrastructure mode	Ad hoc mode
Same SSID	Yes, including the wireless access point	Yes
Same channel	Yes, including the wireless access point	Yes

We recommend setting up a network in infrastructure mode using the installation CD that came with the printer.

Infrastructure mode is the recommended setup method because it provides:

- Increased network security
- Increased reliability
- Faster performance
- Easier setup

Finding the signal strength

Wireless devices have built-in antennas that transmit and receive radio signals. The signal strength listed on the printer network setup page indicates how strongly a transmitted signal is being received. Many factors can affect the signal strength. One factor is interference from other wireless devices or other devices such as microwave ovens. Another factor is distance. The farther two wireless devices are from each other, the more likely it is that the communication signal will be weaker.

The strength of the signal received by your computer can also affect the connectivity of the printer with the network during configuration. When you installed the wireless adapter in your computer, the adapter software probably placed an icon in your system tray. Try double-clicking this icon, and it will tell you how strongly the computer is receiving the wireless signal from the network.

To improve signal quality, remove sources of interference and/or move wireless devices closer to the wireless access point (wireless router).

How can I improve wireless signal strength?

A common reason wireless printers fail to communicate over a network is poor wireless signal quality. If the signal is too weak, too distorted, or blocked by an object, it cannot carry information between the access point and the printer. To determine if the printer is receiving a strong signal from the access point, print a network setup page. The Quality field indicates the relative strength of the wireless signal the printer is receiving. Drops in signal strength can be intermittent, however, and although the signal quality appears high, it may drop during certain conditions.

If you think signal strength is a problem between your access point and the printer, try one or more of the following:

Notes:

- The solutions below are for infrastructure networks. If you are using an ad hoc network, adjust the computer when the solution suggests adjusting the access point.
- Ad hoc networks have a much shorter range than infrastructure networks. Try moving the printer closer to the computer if they seem to have trouble communicating.

MOVE THE PRINTER CLOSER TO THE WIRELESS ACCESS POINT/WIRELESS ROUTER

If the printer is too far away from the access point, it will not be able to communicate with other devices on the network. For most indoor wireless networks, the maximum distance between the access point and the printer is approximately 100 feet (30 meters). This distance could be longer or shorter, depending upon the layout of the network and the limitations of the access point.

REMOVE OBSTACLES BETWEEN THE ACCESS POINT AND THE PRINTER

The wireless signal from your access point will pass through most objects. Most walls, floors, furniture and other objects will not block the wireless signal. However, there are materials that are too dense for the signal to pass through. Objects containing metal and concrete can block the signal. Arrange your printer and access point so that the signal is not blocked by such objects.

REMOVE SOURCES OF INTERFERENCE

Other types of radio frequencies can cause problems with the wireless signal on your network. These sources of interference can cause printing issues that seem to come and go. Turn off potential sources of interference where possible. Avoid using microwaves and cordless phones when printing over your wireless network.

If another wireless network is operating in the vicinity, change the wireless channel on the access point.

Do not place your access point on a printer or other electronic device. Such devices can also interfere with the wireless signal.

ARRANGE THE NETWORK TO REDUCE SIGNAL ABSORPTION

Even when the wireless signal is able to pass through an object, it is slightly weakened. If it passes through too many objects, it can be significantly weakened. All objects absorb part of the wireless signal when it passes through them, and certain types of objects absorb enough to cause communications problems. Place your access point as high in the room as possible to avoid signal absorption.

How can I make sure my computer and printer are connected to the same wireless network?

If the printer is not on the same wireless network as the computer, you will not be able to print wirelessly. The SSID of the printer must match the SSID of the computer, if the computer is already connected to the wireless network.

- 1 Obtain the SSID of the network that the computer is connected to:
 - a Type the IP address of your wireless access point (wireless router) into the address field of your Web browser.
If you do not know the IP address of the wireless access point:
 - 1 Click , or click **Start** and then click **Run**.
 - 2 In the Start Search or Run box, type **cmd**.
 - 3 Press **Enter**, or click **OK**.
The Command Prompt window opens.
 - 4 Type **ipconfig**, and then press **Enter**. Check the Wireless Network Connection section:
 - The “Default Gateway” entry is typically the wireless access point.
 - The IP address appears as four sets of numbers separated by periods, such as 192.168.2.134.
 - b Type the user name and password of the router when prompted.
 - c Click **OK**.
 - d On the main page, click **Wireless** or any other selection where settings are stored. The SSID will be displayed.
 - e Write down the SSID.

Note: Make sure you copy it exactly, including any capital letters.

- 2 Print the printer network setup page.
In the Wireless section, look for **SSID**.
- 3 Compare the SSID of the computer and SSID of the printer.
If the SSIDs are the same, then the computer and the printer are connected to the same wireless network.
If the SSIDs are not the same, then run the utility again to set up the printer on the wireless network used by the computer.

Can I use my printer on a USB and a network connection at the same time?

Yes; the printer supports a simultaneous USB and network connection. The printer can be configured in the following ways:

- Locally attached (connected to a computer using a USB cable)
- Wireless network
- Ethernet network
- Wireless network and locally attached simultaneously
- Ethernet network and locally attached simultaneously

What is a MAC address?

A Media Access Control (MAC) address is a 48-bit identifier associated with the hardware of network equipment. The MAC address may also be called the physical address because it is connected to the hardware of a device instead of its software. The MAC address is displayed as a hexadecimal number in this format: 01-23-45-67-89-AB.

Every device capable of communicating on a network has a MAC address. Network printers, computers, and routers, whether Ethernet or wireless, all have MAC addresses.

While it is possible to change the MAC address of a network device, it is not common practice to do so. For this reason, MAC addresses are considered permanent. IP addresses are easily changed, so MAC addresses are a more reliable method of identifying a specific device on a network.

Routers with security capabilities may allow filtering of MAC addresses on networks. This allows a managed list of devices to access the network, identified by their MAC addresses. MAC address filtering can help prevent access on the network from unwanted devices, such as from intruders on a wireless network. MAC address filtering can also prevent legitimate access if you forget to add a new device to the router's list of allowed addresses. If your network uses MAC address filtering, be sure to add the MAC address of the printer to the list of allowed devices.

How do I find the MAC address?

Most network equipment has a unique hardware identification number to distinguish it from other devices on the network. This is called the *Media Access Control* (MAC) address.

When installing the printer on a network, make sure you select the printer with the correct MAC address.

The MAC address label is located inside the printer.

The MAC address of the internal print server is a series of letters and numbers. Other devices sometimes use a type of MAC address called *Universally Administered Address* (UAA).

Note: A list of MAC addresses can be set on an access point (router) so that only devices with matching MAC addresses are allowed to operate on the network. This is called *MAC filtering*. If MAC filtering is enabled in your access point and you want to add a printer to your network, then the MAC address of the printer must be included in the MAC filter list.

What is an IP address?

An IP address is a unique number used by devices (such as a wireless printer, computer, or wireless access point) on an IP network to locate and communicate with each other. Devices on an IP network can communicate with each other only if they have unique and valid IP addresses. A unique IP address means no two devices on the same network have the same IP address.

An IP address is a group of four numbers separated by periods. An example of an IP address is 192.168.100.110.

What is TCP/IP?

Networks are able to function because computers, printers, and other devices are able to send data to each other, either through cables or by using wireless signals. This transfer of data is made possible by sets of data transmission rules called *protocols*. A protocol can be thought of as a language, and like a language, it has rules allowing participants to communicate with each other.

Different types of networks use different protocols, but *Transmission Control Protocol/Internet Protocol* (TCP/IP) is the most popular. TCP/IP is used to send data over the Internet as well as over most corporate and home networks.

Because computers do not understand words and instead rely upon numbers for communication, TCP/IP requires that every device on a network using TCP/IP to communicate must have an IP address. IP addresses are essentially unique computer names in a numeric format, used to transfer data around a network. IP addresses allow TCP/IP to confirm requests for and receipt of data by various devices on the network.

How do I locate IP addresses?

1 Click , or click **Start** and then click **Run**.

2 In the Start Search or Run box, type `cmd`.

3 Press **Enter**, or click **OK**.

The Command Prompt window opens.

4 Type `ipconfig`, and then press **Enter**.

The IP address appears as four sets of numbers separated by periods, such as 192.168.0.100.

How to locate a printer IP address

- You can locate the printer IP address by viewing the printer network setup page.

How are IP addresses assigned?

An IP address may be assigned automatically by the network using DHCP. Once the printer is set up on a computer, the computer sends all print jobs across the network to the printer using this address.

If the IP address is not automatically assigned, you will be asked during wireless setup to manually enter an address and other network information after selecting your printer from the available list.

What is a key index?

A wireless access point (wireless router) can be configured with as many as four WEP keys. Only one key is used on the network at a time, however. The keys are numbered, and the number of a key is referred to as its key index. All devices on the wireless network must be configured to use the same key index when multiple WEP keys are configured on the wireless access point.

Select the same key index on your printer as you are using on your wireless access point.

Maintaining the printer

Maintaining ink cartridges

In addition to the following tasks that you can perform, your printer performs an automatic maintenance cycle every week if it is plugged into an electrical outlet. It will briefly come out of Power Saver mode or will temporarily power on if it is turned off.

Checking ink levels

Using the printer control panel

- 1 From the printer control panel, press .
- 2 Press the up or down arrow button to scroll to **Maintenance**, and then press .
- 3 Press  again to select **Check Ink Levels**.

Using the printer software

- 1 Click  or **Start**.
- 2 Click **All Programs** or **Programs**, and then select the printer program folder from the list.
- 3 Select **Printer Home**.
- 4 Choose your printer from the printer drop-down list.
- 5 From the Maintenance tab, click **Check ink levels**.

Aligning the printhead

If the characters or lines on your printer image appear jagged or wavy, then you may need to align the printhead.

Using the printer control panel

- 1 Load plain paper.
- 2 From the printer control panel, press .
- 3 Press the up or down arrow button to scroll to **Maintenance**, and then press .
- 4 Press the up or down arrow button to scroll to **Align Printer**, and then press .

An alignment page prints.

Note: Do not remove the alignment page until printing is finished.

Using the printer software

- 1 Load plain paper.
- 2 Click  or **Start**.
- 3 Click **All Programs** or **Programs**, and then select the printer program folder from the list.

- 4 Select **Printer Home**.
- 5 Choose your printer from the printer drop-down list.
- 6 From the Maintenance tab, click **Align cartridges**.
- 7 Follow the instructions on the computer screen.

If you aligned the cartridges to improve print quality, then print your document again. If print quality has not improved, then clean the printhead nozzles.

Cleaning the printhead nozzles

Poor print quality is sometimes due to clogged printhead nozzles. Clean the printhead nozzles to improve the quality of your prints.

Notes:

- Cleaning the printhead nozzles uses ink, so clean them only when necessary.
- Deep cleaning uses more ink, so try the Clean Printhead option first to save ink.
- If the ink levels are too low, you must replace the ink cartridges before you can clean the printhead nozzles.

Using the printer control panel

- 1 From the printer control panel, press .
 - 2 Press the up or down arrow button to scroll to **Maintenance**, and then press .
 - 3 Press the up or down arrow button to scroll to **Clean Printhead** or **Deep Clean Printhead**, and then press .
- A cleaning page prints.

Using the printer software

- 1 Click  or **Start**.
- 2 Click **All Programs** or **Programs**, and then select the printer program folder from the list.
- 3 Select **Printer Home**.
- 4 Choose your printer from the printer drop-down list.
- 5 From the Maintenance tab, click **Clean Cartridges**.
- 6 Follow the instructions on the computer screen.

Cleaning the exterior of the printer

- 1 Make sure that the printer is turned off and unplugged from the wall outlet.

CAUTION—SHOCK HAZARD: To avoid the risk of electric shock when cleaning the exterior of the printer, unplug the power cord from the wall outlet and disconnect all cables to the printer before proceeding.

- 2 Remove all paper from the printer.

- 3 Dampen a clean, lint-free cloth with water.

Warning—Potential Damage: Do not use household cleaners or detergents, as they may damage the finish of the printer.

- 4 Wipe only the outside of the printer, making sure to remove any ink residue that has accumulated on the paper exit tray.

Warning—Potential Damage: Using a damp cloth to clean the interior may cause damage to your printer.

- 5 Make sure the printer is dry before beginning a new print job.

Cleaning the scanner glass

- 1 Dampen a clean, lint-free cloth with water.

- 2 Gently wipe the scanner glass clean.

Note: Make sure all ink or corrective fluid on a document is dry before placing the document on the scanner glass.

Troubleshooting

Before you troubleshoot

Use this checklist to solve most printer problems:

- Make sure the power cord is plugged into the printer and into a properly grounded electrical outlet.
- Make sure the printer is not plugged into any surge protectors, uninterrupted power supplies, or extension cords.
- Make sure the printer is turned on.
- Make sure the printer is securely connected to the host computer, print server, or other network access point.
- Check the printer for error messages, and resolve any errors.
- Check for paper jam messages, and clear any jams.
- Check the ink cartridges, and install new cartridges if necessary.
- Use the Service Center to locate and solve the problem (Windows only).
- Turn the printer off, wait about 10 seconds, and then turn the printer back on.

Using the Service Center to solve printer problems

The Service Center provides step-by-step troubleshooting help and contains links to printer maintenance tasks and customer support.

To open the Service Center, use one of these methods:

Method 1	Method 2
If it appears on an error message dialog, click the For additional assistance, use the Service Center link.	1 Click  or Start. 2 Click All Programs or Programs, and then select the printer program folder from the list. 3 Select Printer Home. 4 From the Support tab, select Service Center.

If Troubleshooting does not solve your problem

Visit our Web site at **support.dell.com** to find the following:

- Live online technical support
- Contact numbers for telephone technical support

Setup troubleshooting

- "Incorrect language appears on the display" on page 108
- "Printhead errors" on page 108
- "Software did not install" on page 110
- "Print job does not print or is missing pages" on page 111

- “Printer is printing blank pages” on page 112
- “Printer is busy or does not respond” on page 112
- “Cannot delete documents from the print queue” on page 112
- “Cannot print through USB” on page 113

Incorrect language appears on the display

If the "Before you troubleshoot" checklist does not solve the problem, then try one or more of the following:

CHANGE THE LANGUAGE USING THE PRINTER MENUS

- 1 From the printer control panel, press .
- 2 Press the arrow buttons to scroll to **Defaults**, and then press **OK**.
- 3 Press the arrow buttons to scroll to **Set Defaults**, and then press **OK**.
- 4 Press the arrow buttons to scroll to **Use Factory**, and then press **OK**.
- 5 Complete the initial printer setup.

CHANGE THE LANGUAGE USING A BUTTON COMBINATION (IF YOU CANNOT READ THE CURRENT LANGUAGE)

- 1 Turn the printer off.
Note: If you have set the Power Saver timeout in the Setup menu, then press and hold  for three seconds to turn off the printer.
- 2 Press and hold down  and , and then press and release  to turn the printer on.
Note: Do not release  and  until **Language** appears on the display, indicating that the printer has been reset.
- 3 Complete the initial printer setup.

Printhead errors

If the "Before you troubleshoot" checklist does not solve the problem, then try the following:

REMOVE AND REINSERT THE PRINthead

- 1 Open the printer and lift the latch.

- 2 Remove the printhead.

Warning—Potential Damage: Do not touch the printhead nozzles.

- 3 Wipe the printhead contacts using a clean, lint-free cloth.

- 4 Reinsert the printhead, and then close the latch until it clicks.

- 5 Close the printer.

Note: If removing and reinserting the printhead does not resolve the error, then contact technical support.

Software did not install

If you encountered problems while installing, or if your printer does not appear in the list in the Printers folder or as a printer option when sending a print job, then try removing and reinstalling the software.

Before you reinstall the software, do the following:

MAKE SURE THAT YOUR COMPUTER MEETS THE MINIMUM SYSTEM REQUIREMENTS LISTED ON THE PRINTER BOX

TEMPORARILY DISABLE SECURITY PROGRAMS IN WINDOWS BEFORE INSTALLING THE SOFTWARE

CHECK THE USB CONNECTION

- 1 Check the USB cable for any obvious damage. If the cable is damaged, then use a new one.
- 2 Firmly plug the square end of the USB cable into the back of the printer.
- 3 Firmly plug the rectangular end of the USB cable into the USB port of the computer.

The USB port is marked with a  USB symbol.

Note: If you continue to have problems, then try another USB port on the computer. You may have connected to a defective port.

RECONNECT THE PRINTER POWER SUPPLY

- 1 Turn off the printer, and then unplug the power cord from the wall outlet.
- 2 Gently remove the power supply from the printer, and then reinsert it.
- 3 Plug the power cord into the wall outlet, and then turn on the printer.

Print job does not print or is missing pages

If the "Before you troubleshoot" checklist does not solve the problem, then try one or more of the following:

MAKE SURE THE INK CARTRIDGES ARE INSERTED CORRECTLY

- 1 Turn the printer on, and then open the printer.
- 2 Make sure the cartridges are inserted correctly.
The cartridges should *click* firmly into the matching color slot of the printhead.
- 3 Close the printer.

SELECT YOUR PRINTER FROM THE PRINT DIALOG BEFORE SENDING THE PRINT JOB

MAKE SURE THE PRINT JOB IS NOT PAUSED

MAKE SURE YOUR PRINTER IS SET AS THE DEFAULT PRINTER

RECONNECT THE PRINTER POWER SUPPLY

- 1 Turn off the printer, and then unplug the power cord from the wall outlet.
- 2 Gently remove the power supply from the printer, and then reinsert it.
- 3 Plug the power cord into the wall outlet, and then turn on the printer.

REMOVE AND RECONNECT THE USB CABLE CONNECTED TO YOUR PRINTER

CHECK THE USB CONNECTION

- 1 Check the USB cable for any obvious damage. If the cable is damaged, then use a new one.
- 2 Firmly plug the square end of the USB cable into the back of the printer.
- 3 Firmly plug the rectangular end of the USB cable into the USB port of the computer.

The USB port is marked with a  USB symbol.

Note: If you continue to have problems, then try another USB port on the computer. You may have connected to a defective port.

REMOVE AND REINSTALL THE PRINTER SOFTWARE

Printer is printing blank pages

Blank pages may be caused by improperly installed ink cartridges.

REINSTALL THE INK CARTRIDGES AND DEEP CLEAN AND ALIGN THE PRINTHEAD

- 1 Reinstall the ink cartridges, see “Replacing ink cartridges” on page 11 for more information.
If the cartridges do not seem to fit, make sure the printhead is properly seated, and then try installing the cartridges again.
- 2 Load plain paper.
- 3 From the printer control panel, press .
- 4 Press the arrow buttons to scroll to **Maintenance**, and then press **OK**.
- 5 Press the arrow buttons to scroll to **Deep Clean Printhead**, and then press **OK**.
A cleaning page prints.
- 6 Press the arrow buttons to scroll to **Align Printer**, and then press **OK**.
An alignment page prints.

Note: Do not remove the alignment page until printing is finished.

Printer is busy or does not respond

If the "Before you troubleshoot" checklist does not solve the problem, then try one or more of the following:

MAKE SURE THE PRINTER IS NOT IN POWER SAVER MODE

If the power light is blinking on and off slowly, then the printer is in Power Saver mode. Press  to wake up the printer.

If the printer will not come out of Power Saver mode, then reset the power:

- 1 Unplug the power cord from the wall outlet, and then wait 10 seconds.
- 2 Insert the power cord into the wall outlet, and then turn on the printer.

If this problem persists, then check our Web site for updates for your printer software or firmware.

RECONNECT THE PRINTER POWER SUPPLY

- 1 Turn off the printer, and then unplug the power cord from the wall outlet.
- 2 Gently remove the power supply from the printer, and then reinsert it.
- 3 Plug the power cord into the wall outlet, and then turn on the printer.

Cannot delete documents from the print queue

If you have jobs stuck in the print queue and cannot delete them to get other jobs to print, then the computer and printer may not be communicating.

RESTART THE COMPUTER AND TRY AGAIN

Cannot print through USB

If the "Before you troubleshoot" checklist does not solve the problem, then try one or more of the following:

CHECK THE USB CONNECTION

- 1 Check the USB cable for any obvious damage. If the cable is damaged, then use a new one.
- 2 Firmly plug the square end of the USB cable into the back of the printer.
- 3 Firmly plug the rectangular end of the USB cable into the USB port of the computer.

The USB port is marked with a  USB symbol.

Note: If you continue to have problems, then try another USB port on the computer. You may have connected to a defective port.

MAKE SURE THE USB PORT IS ENABLED IN WINDOWS

- 1 Click , or click **Start** and then click **Run**.
- 2 In the Start Search or Run box, type `devmgmt.msc`.
- 3 Press **Enter**, or click **OK**.

The Device Manager opens.

- 4 Click the plus sign (+) beside Universal Serial Bus controllers.

If USB Host Controller and USB Root Hub are listed, then the USB port is enabled.

For more information, see the computer documentation.

REMOVE AND REINSTALL THE PRINTER SOFTWARE

Jams and misfeeds troubleshooting

- "Paper jam in the printer" on page 113
- "Paper jam in the duplex unit" on page 114
- "Paper jam in the ADF (selected models only)" on page 115
- "Paper or specialty media misfeeds" on page 116

Paper jam in the printer

Note: The parts inside the printer are sensitive. Avoid unnecessarily touching these parts while clearing jams.

- 1 Press  to turn off the printer.
- 2 Check the paper tray or lift the scanner unit to check for jammed paper.

- 3 Firmly grasp the paper, and then gently pull it out.
Note: Be careful not to tear the paper while removing it.
- 4 Press  to turn the printer back on.

Paper jam in the duplex unit

Note: The parts inside the printer are sensitive. Avoid unnecessarily touching these parts while clearing jams.

- 1 Push down the duplex latches and pull out the duplex unit.

CAUTION—POTENTIAL INJURY: The area behind the duplex cover has protruding ribs as part of the paper path. To avoid injury, use caution when accessing this area for clearing a paper jam.

- 2 Firmly grasp the paper, and then gently pull it out.

Note: Be careful not to tear the paper while removing it.

- 3 Reinsert the duplex unit.

- 4 Touch **DONE** or press **OK**, depending on your printer model.
- 5 From your computer, resume the print job.

Paper jam in the ADF (selected models only)

Note: The parts inside the printer are sensitive. Avoid unnecessarily touching these parts while clearing jams.

- 1 Open the ADF door, and then gently pull out the jammed paper.

Note: Be careful not to tear the paper while removing it.

- 2 Close the ADF door.
- 3 Touch **DONE** or press **OK**, depending on your printer model.
- 4 From your computer, resume the print job.

Paper or specialty media misfeeds

These are possible solutions if paper or specialty media misfeeds or skews, or if multiple sheets feed or stick together. Try one or more of the following:

CHECK PAPER CONDITION

Use only new, unwrinkled paper.

CHECK PAPER LOADING

- Load a smaller amount of paper into the printer.
- Load paper with the print side facedown. (If you are not sure which side is the printable side, see the instructions that came with the paper.)
- Check the loading instructions for your paper or specialty media.

REMOVE EACH PAGE AS IT IS PRINTED

ADJUST THE PAPER GUIDES TO FIT THE LOADED PAPER

Print troubleshooting

- “Poor quality at the edges of the page” on page 117
- “Streaks or lines on printed image” on page 117

- "Print speed is slow" on page 118
- "Computer slows down when printing" on page 118

Poor quality at the edges of the page

If the "Before you troubleshoot" checklist does not solve the problem, then try one or more of the following:

CHECK MINIMUM PRINT SETTINGS

Unless you are using the borderless feature, use these minimum print margin settings:

- Left and right margins:
 - 6.35 mm (0.25 in.) for letter-size paper
 - 3.37 mm (0.133 in.) for all paper sizes except letter
- Top margin: 1.7 mm (0.067 in.)
- Bottom margin: 12.7 mm (0.5 in.)

SELECT THE BORDERLESS PRINT FEATURE

- 1 With a document or photo open, click **File → Print**.
- 2 Click **Properties, Preferences, Options, or Setup**.
- 3 From the Paper Options section of the Print Setup tab, select **Borderless**.

Streaks or lines on printed image

If the "Before you troubleshoot" checklist does not solve the problem, then try one or more of the following:

CHECK THE INK LEVELS

Replace low or empty ink cartridges.

SELECT A HIGHER PRINT QUALITY FROM THE PRINTER SOFTWARE

MAKE SURE THE INK CARTRIDGES ARE PROPERLY INSTALLED

ALIGN THE PRINTHEAD

CLEAN OR DEEP CLEAN THE PRINTHEAD NOZZLES

Note: If these solutions do not remove the streaks or lines on the printed image, then contact technical support.

Print speed is slow

If the "Before you troubleshoot" checklist does not solve the problem, then try one or more of the following:

MAXIMIZE COMPUTER PROCESSING SPEED

- Close all applications not in use.
- Minimize the number and size of graphics and images in the document.
- Remove as many unused fonts as possible from your system.

ADD MEMORY

Consider purchasing more RAM.

SELECT A LOWER PRINT QUALITY FROM THE PRINTER SOFTWARE

MANUALLY SELECT A PAPER TYPE THAT MATCHES THE TYPE OF PAPER YOU ARE USING

REMOVE AND REINSTALL THE PRINTER SOFTWARE

Computer slows down when printing

These are possible solutions. Try one of the following:

IF YOU ARE USING A USB CONNECTION, THEN TRY A DIFFERENT USB CABLE

IF YOU ARE ON A NETWORK, THEN RESET THE POWER OF THE ACCESS POINT (ROUTER)

- 1 Unplug the power cord from the access point.
- 2 Wait ten seconds, and then insert the power cord.

Copy and scan troubleshooting

- "Copier or scanner does not respond" on page 119
- "Scanner unit does not close" on page 119
- "Poor copy or scanned image quality" on page 119
- "Partial copies or scans of documents or photos" on page 119
- "Scan was not successful" on page 120
- "Scanning takes too long or freezes the computer" on page 120
- "Cannot scan to a computer over a network" on page 120

Copier or scanner does not respond

If the "Before you troubleshoot" checklist does not solve the problem, then try one or more of the following:

SET YOUR PRINTER AS THE DEFAULT PRINTER

REMOVE AND REINSTALL THE PRINTER SOFTWARE

Scanner unit does not close

- 1 Lift the scanner unit.
- 2 Remove any obstruction keeping the scanner unit open.
- 3 Lower the scanner unit.

Poor copy or scanned image quality

If the "Before you troubleshoot" checklist does not solve the problem, then try one or more of the following:

CLEAN THE SCANNER GLASS

ADJUST THE SCAN QUALITY FROM THE PRINTER SOFTWARE

REVIEW THE TIPS FOR COPYING, SCANNING, AND IMPROVING PRINT QUALITY

USE A CLEARER VERSION OF THE ORIGINAL DOCUMENT OR IMAGE

MAKE SURE THE DOCUMENT OR PHOTO IS LOADED FACEDOWN ON THE SCANNER GLASS AND IN THE CORRECT CORNER

Partial copies or scans of documents or photos

If the "Before you troubleshoot" checklist does not solve the problem, then try one or more of the following:

MAKE SURE THE DOCUMENT OR PHOTO IS LOADED FACEDOWN ON THE SCANNER GLASS AND IN THE CORRECT CORNER

SELECT A PAPER SIZE FROM THE PRINTER SOFTWARE THAT MATCHES THE LOADED PAPER

MAKE SURE THE ORIGINAL SIZE SETTING MATCHES THE SIZE OF THE DOCUMENT YOU ARE SCANNING

Scan was not successful

If the "Before you troubleshoot" checklist does not solve the problem, then try one or more of the following:

CHECK THE USB CONNECTION

- 1 Check the USB cable for any obvious damage. If the cable is damaged, then use a new one.
- 2 Firmly plug the square end of the USB cable into the back of the printer.
- 3 Firmly plug the rectangular end of the USB cable into the USB port of the computer.

The USB port is marked with a  USB symbol.

Note: If you continue to have problems, then try another USB port on the computer. You may have connected to a defective port.

RESTART THE COMPUTER

Scanning takes too long or freezes the computer

If the "Before you troubleshoot" checklist does not solve the problem, then try one or more of the following:

CLOSE OTHER SOFTWARE PROGRAMS THAT ARE NOT BEING USED

USE A LOWER SCANNING RESOLUTION

Cannot scan to a computer over a network

If the "Before you troubleshoot" checklist does not solve the problem, then try one or more of the following:

MAKE SURE THE PRINTER AND THE DESTINATION COMPUTER ARE CONNECTED TO THE SAME NETWORK

MAKE SURE THE PRINTER SOFTWARE IS INSTALLED ON THE DESTINATION COMPUTER

Fax troubleshooting

- "Fax troubleshooting checklist" on page 121
- "Cannot send faxes" on page 121
- "Cannot receive faxes" on page 123
- "Cannot run the fax software" on page 124
- "Fax error messages on the printer control panel" on page 125

For detailed descriptions of common terms and tasks, see the following:

- "Setting up the printer to fax" on page 58
- "Faxing FAQ" on page 74

Fax troubleshooting checklist

If you encounter problems sending and receiving faxes, then check the connection first:

- 1 Check for a dial tone on the telephone line by plugging an analog telephone into the wall jack, DSL filter, VoIP device, or cable modem where you connected the printer. Make sure you plug the telephone into the same port.
If you do not hear a dial tone, then contact your line provider.
- 2 While the printer is connected to the telephone line, check for a dial tone by plugging an analog telephone into the  port of the printer.
If you do not hear a dial tone, then use the checklist below. Listen for a dial tone after checking each item.
If you hear a dial tone but still have problems sending and receiving faxes, then see the other topics in this section.

Connection checklist

- Make sure that the printer and other devices on the line (if applicable) are set up and configured correctly according to your setup scenario.
- Make sure that the cables are connected to the correct ports.
- Make sure that the cables are securely plugged in.

Check the cable connections for the following hardware, if applicable:

Power supply	Answering machine	Cable modem	Splitter
Telephone	VoIP adapter	DSL filter	RJ-11 adapter

- If the printer is connected to a Digital Subscriber Line, then make sure you are using a DSL filter for the printer.
- If the printer is connected to a VoIP adapter or cable modem, then make sure that the printer is plugged into the first phone port.
- If you are using a splitter, then make sure that you are using a phone splitter. Do *not* use a line splitter.

Cannot send faxes

If the “Fax troubleshooting checklist” does not solve the problem, then try one or more of the following:

MAKE SURE THAT YOU HAVE REGISTERED YOUR USER INFORMATION IN THE PRINTER

If you did not enter your user information during initial setup, then enter your fax name and fax number. In some countries, you cannot send a fax without entering your fax name or company name. Some fax machines also block unknown faxes or faxes without sender information.

DECREASE THE TRANSMISSION SPEED OF THE FAX MODEM

The modem of the printer can transmit data at 33,600 bps. This is the maximum speed at which the printer can send and receive faxes. It is not necessary, however, to set the modem to its fastest transmission capability. The speed of the modem of the receiving fax machine must match or be greater than the speed at which you are sending your fax. Otherwise, your fax will not be received.

To decrease the transmission speed of the modem:

- 1 From the printer control panel, press .
- 2 Press the arrow buttons to scroll to **Fax Setup**, and then press .

- 3 Press the arrow buttons to scroll to **Dialing and Sending**, and then press **OK**.
- 4 Press the arrow buttons to scroll to **Max Send Speed**, and then press **OK**.
- 5 Select a sending speed, and then press **OK**.

SET THE PRINTER TO SCAN THE ORIGINAL DOCUMENT BEFORE DIALING THE NUMBER

The printer does not automatically redial if you set it to scan the original document after dialing the number.

Set the printer to scan before dialing so that you do not have to scan the document again if the fax fails. The scanned document is saved in the printer memory. The printer can then retrieve it and automatically redial the number.

To set the printer to scan before dialing:

- 1 From the printer control panel, press .
- 2 Press the arrow buttons to scroll to **Fax Setup**, and then press **OK**.
- 3 Press the arrow buttons to scroll to **Dialing and Sending**, and then press **OK**.
- 4 Press the arrow buttons to scroll to **Scan**, and then press **OK**.
- 5 Press the arrow buttons to scroll to **Before Dial**, and then press **OK**.

ENABLE ERROR CORRECTION

Errors and blurs may appear in the faxed document if there is too much noise on the line. This option enables the printer to transmit the bad blocks of data again and correct the errors. When a fax has too many errors, the fax may be rejected by the receiving fax machine.

To make sure that error correction is enabled:

- 1 From the printer control panel, press .
- 2 Press the arrow buttons to scroll to **Fax Setup**, and then press **OK**.
- 3 Press the arrow buttons to scroll to **Dialing and Sending**, and then press **OK**.
- 4 Press the arrow buttons to scroll to **Error Correction**, and then press **OK**.
- 5 Check to see if error correction is set to On.

If it is not set to On, press the arrow buttons to select **On**, and then press **OK**.

ENABLE AUTOMATIC FAX CONVERSION

If the receiving fax machine does not support color fax, then this option automatically converts the outgoing color fax to black and white. It also automatically reduces the resolution of the fax to a resolution that the receiving machine can support.

To make sure that automatic fax conversion is enabled:

- 1 From the printer control panel, press .
- 2 Press the arrow buttons to scroll to **Fax Setup**, and then press **OK**.
- 3 Press the arrow buttons to scroll to **Dialing and Sending**, and then press **OK**.

- 4 Press the arrow buttons to scroll to **Auto Fax Convert**, and then press **OK**.
- 5 Check to see if automatic fax conversion is set to On.
If it is not set to On, press the arrow buttons to select **On**, and then press **OK**.

MAKE SURE THAT THE DIAL PREFIX SETTING IS CORRECT

The dialing prefix is the number or series of numbers that you press before you can dial the actual fax number or telephone number. If the printer is in an office setting or in a private branch exchange, this can be a specific number that you need to press so you can make a call outside the office.

Make sure that the dial prefix entered in the printer is correct for your network.

To check the dial prefix setting:

- 1 From the printer control panel, press .
- 2 Press the arrow buttons to scroll to **Fax Setup**, and then press **OK**.
- 3 Press the arrow buttons to scroll to **Dialing and Sending**, and then press **OK**.
- 4 Press the arrow buttons to scroll to **Dial Prefix**, and then press **OK**.
- 5 Press the arrow buttons to view the prefix.
- 6 If the prefix is not correct, enter the correct prefix, and then press **OK**.

Cannot receive faxes

If the "Fax troubleshooting checklist" does not solve the problem, then try one or more of the following:

MAKE SURE THAT YOU HAVE CONFIGURED THE CORRECT SETTINGS FOR YOUR SETUP

The fax settings depend on whether the printer is connected to its own fax line or shares the line with other devices.

If the printer is sharing the telephone line with an answering machine, then make sure that the following are set:

- Auto Answer is On.
- The printer picks up on a greater number of rings than the answering machine.
- The printer picks up on the correct distinctive ring (if you subscribe to a distinctive ring service).

If the printer is sharing the telephone line with a telephone subscribed to voice mail, then make sure that the following are set:

- Auto Answer is Off (if you have only one number on the telephone line).
- The printer picks up on the correct distinctive ring (if you subscribe to a distinctive ring service).

MAKE SURE THAT THE PRINTER IS CONNECTED TO AN ANALOG PORT

The printer is an analog device. If you are using a PBX system, then make sure that the printer is connected to an analog port on the PBX. You may need a digital line converter that converts digital signals into analog signals.

MAKE SURE THAT THE PRINTER MEMORY IS NOT FULL

The printer saves an incoming fax to the printer memory before it prints the fax. If the printer runs out of ink or runs out of paper while receiving the fax, then the printer saves the fax so you can print it later. However, if the printer memory is full, then the printer may not be able to receive more incoming faxes. An error message appears on the display when the printer memory is full. Resolve the error to free up space in the printer memory.

MAKE SURE THAT FAX FORWARDING IS DISABLED

You may have turned on Fax Forwarding. Disable this option so that the printer can receive the fax.

- 1 From the printer control panel, press .
- 2 Press the arrow buttons to scroll to **Fax Setup**, and then press **OK**.
- 3 Press the arrow buttons to scroll to **Ringing and Answering**, and then press **OK**.
- 4 Press the arrow buttons to scroll to **Fax Forward**, and then press **OK**.
- 5 Press the arrow buttons to scroll to **Off**, and then press **OK**.

INCREASE THE RINGER VOLUME

If you set the printer to receive faxes manually (Auto Answer Off), then increase the ringer volume.

MAKE SURE THAT YOU HAVE THE CORRECT MANUAL ANSWER CODE

If you set the printer to receive faxes manually (Auto Answer Off), then you need to press the correct code when a fax comes in so that the printer can receive it.

To retrieve the correct code:

- 1 From the printer control panel, press .
- 2 Press the arrow buttons to scroll to **Fax Setup**, and then press **OK**.
- 3 Press the arrow buttons to scroll to **Ringing and Answering**, and then press **OK**.
- 4 Press the arrow buttons to scroll to **Manual Pickup Code**, and then press **OK**.
- 5 Copy the manual answer code that appears on the display.

Cannot run the fax software

The printer must be connected to a telephone, DSL, VoIP, or cable service before you can configure the fax settings in the fax software.

MAKE SURE THE PRINTER IS CONNECTED TO A TELEPHONE LINE

You need to connect the printer to your telephone line (through a standard wall jack, a DSL filter, a VoIP adapter, or a cable modem) before you can open the fax software and configure the fax settings.

MAKE SURE THAT THE PRINTER IS CONNECTED TO THE COMPUTER

MAKE SURE THAT THE PRINTER IS NOT IN POWER SAVER MODE

Fax error messages on the printer control panel

Error Message:	What it indicates:	Possible solutions:
Remote Fax Error	The receiving fax machine cannot receive the fax. The error on the receiving end could be due to several factors.	• Resend the fax. There may have been a problem with the quality of the connection. • Decrease the transmission speed of your fax modem. • Register your user information. In some countries, you cannot send a fax without registering your fax name and fax number. Some fax machines also block faxes without sender information.
Fax Mode Unsupported	The receiving fax machine does not support color fax or the scan resolution of the document that you are sending.	• Enable Auto Fax Conversion. The printer automatically converts color faxes to black and lowers the scan resolution of the document. • Lower the fax quality. • Reformat the document on Letter-size paper.
Unsupported Compression	The fax modem of the receiving fax machine does not support data compression. Fax modems compress data to speed up transmission, but the receiving fax modem needs to have the same compression code.	• Lower the transmission speed of the fax modem, and then resend the fax. • Enable Auto Fax Conversion.
Unsupported Resolution	The receiving fax machine does not support the scan resolution of the document that you are sending.	• Lower the fax quality. • Enable Auto Fax Conversion.
Unrecoverable Fax Error	The fax modem encountered critical errors.	Turn off the printer, turn it back on, and then resend the fax.
Fax Modem Error	The fax modem of the printer may be busy, or the fax modem may have encountered problems during transmission.	Turn off the printer, turn it back on, and then resend the fax.
Phone Line is connected to the incorrect jack on the back of the machine.	The telephone cable is connected to the wrong port on the back of the printer.	Connect the phone cable to the  port on the back of the printer.
Digital line detected	The printer is connected to a digital line.	The printer is an analog device and must be connected to an analog line. To connect the printer to a digital line, you must use a digital line converter or a filter. For more information, see the "Setting up the printer to fax" section.

Error Message:	What it indicates:	Possible solutions:
Failed to Connect Phone Line Error Phone Line Not Connected	The printer cannot detect a dial tone.	See the "Fax troubleshooting checklist."
Phone Line Busy	Your telephone line or the telephone line of the receiving fax machine is busy. This happens especially if the printer is sharing the line with other devices (telephone, answering machine).	• Set the printer to redial. • Increase the time between the redial attempts. • Place a test call to the number to which you want to send a fax to make sure that it is working correctly. • If the telephone line is being used by another device, then wait until the other device is finished before sending the fax. • Schedule to resend the fax at a later time. • Set the printer to scan before dialing. The scanned document is saved in the printer memory. The printer can then retrieve it and automatically redial the number.
No Answer	Auto Answer may have been turned off on the receiving fax machine.	• Verify the number, and then resend the fax. • Set the printer to redial. Note: Depending on your country or region, there may be a limit on the number of redial attempts, regardless of the redial settings that you set in your printer. • Schedule to resend the fax at a later time.
No Caller ID Call Stopped	Your printer stopped the call because the incoming fax has no sender information. You may have chosen to block faxes with no Caller ID or faxes without Caller IDs are not allowed in your country or region.	Disable Block No-ID.

To troubleshoot error messages in the fax software, click **Help** to view the help information for the fax software.

Memory card troubleshooting

- "Memory card troubleshooting checklist" on page 127
- "Nothing happens when a memory card is inserted" on page 127
- "Cannot print documents from a memory card or flash drive" on page 127
- "Photos do not transfer from a memory card across a wireless network" on page 128

Memory card troubleshooting checklist

Before you troubleshoot, use the following checklist to solve most memory card problems:

- Make sure that the memory card you are using can be used in the printer.
- Make sure the memory card is not damaged.
- Make sure memory card contains supported file types.

Nothing happens when a memory card is inserted

If the "Memory card troubleshooting checklist" does not solve the problem, then try one or more of the following:

REINSERT THE MEMORY CARD

The memory card may have been inserted too slowly. Remove and then reinsert the memory card quickly.

CHECK THE USB CONNECTION

- 1 Check the USB cable for any obvious damage. If the cable is damaged, then use a new one.
- 2 Firmly plug the square end of the USB cable into the back of the printer.
- 3 Firmly plug the rectangular end of the USB cable into the USB port of the computer.

The USB port is marked with a  USB symbol.

Note: If you continue to have problems, then try another USB port on the computer. You may have connected to a defective port.

CHECK THE NETWORK CONNECTION

If the printer and computer are connected over a network, then make sure that the correct host and device are communicating. Select the printer from the computer or the computer from the printer.

Cannot print documents from a memory card or flash drive

If the "Memory card troubleshooting checklist" does not solve the problem, then try the following:

CHECK THE USB CONNECTION

- 1 Check the USB cable for any obvious damage. If the cable is damaged, then use a new one.
- 2 Firmly plug the square end of the USB cable into the back of the printer.
- 3 Firmly plug the rectangular end of the USB cable into the USB port of the computer.

The USB port is marked with a  USB symbol.

Note: If you continue to have problems, then try another USB port on the computer. You may have connected to a defective port.

CHECK THE NETWORK CONNECTION

If the printer and computer are connected over a network, then make sure that the correct host and device are communicating. Select the printer from the computer or the computer from the printer.

Photos do not transfer from a memory card across a wireless network

If the "Memory card troubleshooting checklist" does not solve the problem, then try one or more of the following:

MAKE SURE THAT BOTH THE PRINTER AND THE DESTINATION COMPUTER ARE TURNED ON AND READY

SELECT THE CORRECT COMPUTER NAME FROM THE LIST ON THE PRINTER

MAKE SURE YOUR WIRELESS NETWORK IS CONNECTED AND ACTIVE

If your wireless connection is down, then use a USB cable to connect your printer to your computer.

Network troubleshooting

- "Network troubleshooting checklist" on page 128
- "The Continue button is unavailable" on page 129
- "Cannot print and there is a firewall on the computer" on page 131
- "Communication with printer lost when connected to Virtual Private Network (VPN)" on page 131

Network troubleshooting checklist

Before beginning to troubleshoot the wireless printer, verify the following:

General Networking

Make sure:

- The printer, the computer, and the wireless access point are all plugged in and turned on.
- The wireless network is working properly.
Try accessing other computers on your wireless network. If your network has Internet access, try connecting to the Internet over a wireless connection.
- The printer driver is installed on the computer from which you are performing a task.
- The correct printer port is selected.
- The IP address, gateway, and network mask are correct for your network.
Print a network setup page from the printer to check the network settings.
- All switches, hubs, and other connecting devices are turned on.

Ethernet Networking

Make sure:

- The Ethernet cable and connectors are not damaged.
Check the connectors at both ends for any obvious damage. If possible, use a new cable. Damage to the cable may not be obvious.
- The Ethernet cable is firmly plugged in to the printer and to the network hub or wall connection.

Wireless Networking

Make sure:

- The SSID is correct.

Print a network setup page from the printer to check the network settings.

- Your WEP key or WPA passphrase is correct (if your network is secure).

Log in to the wireless access point (wireless router) and check the security settings.

If you are not sure if your security information is correct, run the wireless setup again.

- The printer and the computer are within the range of the wireless network.

For most networks, the printer and the computer should be within 100 feet (30 meters) of the wireless access point (wireless router).

- The Wi-Fi indicator light is lit and is solid green.

- The computer and printer are both connected to the same wireless network.

- The printer is located away from obstacles or electronic devices that could interfere with the wireless signal.

Make sure the printer and wireless access point are not separated by poles, walls, or support columns containing metal or concrete.

Many devices can interfere with the wireless signal, including baby monitors, motors, cordless phones, security system cameras, other wireless networks, and some Bluetooth devices.

- The computer is not connected to a VPN.

- Any non-Microsoft firewalls on the computer are updated to the most recent version and allow the printer software to communicate over the network.

The Continue button is unavailable

Try the following solutions in the order they appear until the Continue button becomes active and can be clicked:

CHECK IF THE **USB** CABLE IS SECURELY PLUGGED INTO THE **USB** PORTS ON BOTH THE COMPUTER AND THE PRINTER

USB ports are marked with the  symbol.

MAKE SURE THAT THE PRINTER IS PLUGGED IN AND TURNED ON

Check to see if the  button is lit. If you have just turned on the printer, then you might need to disconnect the USB cable and reconnect it.

MAKE SURE THAT THE **USB** PORT ON THE COMPUTER IS WORKING

Test the USB port by connecting other devices to it. If you can successfully use other devices from the port, then the port is working.

If the USB port on the computer is not working, then try using the other USB ports on the computer.

MAKE SURE THAT THE **USB** CABLE IS WORKING

Try using a different USB cable. If you are using a cable longer than 10 feet, then try using a shorter cable.

MAKE SURE THAT YOU ARE USING THE CORRECT CD FOR YOUR PRINTER MODEL

Compare the printer model on the CD to the printer model on the printer. The numbers should either match exactly or be within the same series.

If you have any doubts, look for an updated version of the printer software on our Web site. For more information, see "Installing the printer software" in the *User's Guide*. You can access the *User's Guide* from the link at the bottom of the installation screen.

RECONNECT THE POWER SUPPLY

- 1 Turn off the printer.
- 2 Unplug the power cord from the power outlet.
- 3 Remove the power supply from the back of the printer and then plug it back in.
- 4 Plug the power cord back into the power outlet.
- 5 Turn on the printer, and then resume the installation on your computer.

TRY RUNNING THE INSTALLER AGAIN

- 1 Close the installer.
- 2 Remove the CD, and then restart the computer.
- 3 Insert the CD and then run the installer again.

Notes:

- When you get to the **Software Already Installed** screen, make sure you select **Install a printer**.
- If you have already set up your printer, select **Additional Computer** when you get to the **Setting up a new printer?** screen to skip the hardware setup wizard.

CHECK THAT YOUR COMPUTER IS ABLE TO ACKNOWLEDGE USB ACTIVITY ON THE USB PORT

Open the Device Manager to check if it has activity whenever a USB device is connected to a USB port:

- 1 Click , or click **Start** and then click **Run**.
- 2 In the Start Search or Run box, type `devmgmt.msc`.
- 3 Press **Enter**, or click **OK**.
The Device Manager opens.
- 4 Watch the Device Manager window while connecting a USB cable or another device to the USB port. The window refreshes when Device Manager recognizes the USB connection.
 - If there is activity on Device Manager but none of the previous solutions worked, call Customer Support.
 - If there is no activity on Device Manager, there may be a problem with your computer and its USB support. The computer must recognize the USB connection in order for installation to work.

Cannot print and there is a firewall on the computer

Third-party (non-Microsoft) firewalls can interfere with wireless printing. If the printer and computer are configured correctly, and the wireless network is working, but the printer will not print wirelessly, then a firewall could be the problem. If there is a firewall (other than the Windows firewall) on the computer, try one or more of the following:

- Update the firewall using the most recent update available from the manufacturer. Refer to the documentation that came with your firewall for instructions on how to do this.
- If programs request firewall access when you install the printer or try to print, make sure you allow those programs to run.
- Temporarily disable the firewall and install the wireless printer on the computer. Re-enable the firewall when you have completed the wireless installation.

Communication with printer lost when connected to Virtual Private Network (VPN)

You will lose your connection to a wireless printer on your local network when connected to most *Virtual Private Networks* (VPNs). Most VPNs allow users to communicate with only the VPN and no other network at the same time. If you would like to have the ability to connect to your local network and to a VPN at the same time, the system support person for the VPN must enable split tunneling. Be aware that some organizations will not allow split tunneling due to security or technical concerns.

Wireless troubleshooting

- “Network troubleshooting checklist” on page 128
- “Resetting the wireless settings to factory defaults” on page 131
- “Cannot print over wireless network” on page 132
- “Cannot print and there is a firewall on the computer” on page 131
- “Wi-Fi indicator light is not lit” on page 135
- “Wi-Fi indicator light is green but the printer does not print (Windows only)” on page 134
- “Wi-Fi indicator light is still orange” on page 135
- “Wi-Fi indicator light is blinking orange during installation” on page 136
- “Wireless print server not installed” on page 139
- ““Communication not available” message displays when printing wirelessly” on page 139
- “Resolving intermittent wireless communications issues” on page 141

Resetting the wireless settings to factory defaults

- 1 From the printer control panel, press .
- 2 Press the arrow buttons to scroll to **Network Setup**, and then press **OK**.
- 3 Press the arrow buttons to scroll to **Reset Network Adapter to Factory Defaults**, and then press **OK**.
- 4 Press the arrow buttons to scroll to **Yes**, and then press **OK**.

The printer wireless settings are reset to factory default settings. To verify, print a network setup page.

Cannot print over wireless network

If you encountered problems while installing, or if your printer does not appear in the printers folder or as a printer option when sending a print job, then you can try uninstalling and reinstalling the software.

Before you reinstall the software, check the troubleshooting checklist, and then do the following:

TURN THE WIRELESS ACCESS POINT OFF AND THEN BACK ON

Turning the access point off and then back on again can sometimes refresh network connections and resolve connectivity issues.

DISCONNECT FROM VPN SESSION

When you are connected to another network through a VPN connection, you will not be able to access the printer over your wireless network. End your VPN session and try printing again.

MAKE SURE DEMO MODE IS TURNED OFF

Check to see if your printer has a Demo Mode. Selected printer features are not available when Demo Mode is turned on.

From the printer control panel, navigate to **Demo Mode**:

 > **Demo Mode**.

Select **Off**, and then save the setting.

CHECK YOUR WEP KEY OR WPA PASSPHRASE

If your wireless access point is using Wired Equivalent Privacy (WEP) security, then the WEP key should be:

- Exactly 10 or 26 hexadecimal characters. Hexadecimal characters are A–F, a–f, and 0–9.

or

- Exactly 5 or 13 ASCII characters. ASCII characters are letters, numbers, and symbols found on a keyboard. ASCII characters in a WEP key are case-sensitive.

If your wireless access point is using Wi-Fi Protected Access (WPA) security, then the WPA passphrase should be:

- From 8 to 63 ASCII characters. ASCII characters in a WPA passphrase are case-sensitive.

or

- Exactly 64 hexadecimal characters. Hexadecimal characters are A–F, a–f, and 0–9.

Note: If you do not know this information, then see the documentation that came with the wireless network, or contact the person who set up your wireless network.

CHECK IF YOUR WIRELESS ACCESS POINT HAS AN ASSOCIATION/REGISTRATION BUTTON

Wireless broadband boxes in Europe, the Middle East and Africa such as LiveBox, AliceBox, N9UF Box, FreeBox, or Club Internet may require you to press an association/registration button when adding the printer to your wireless network.

If you are using one of these boxes and need more information, see the documentation that came with your box, or contact your *Internet Service Provider* (ISP).

MOVE YOUR ACCESS POINT AWAY FROM OTHER ELECTRONIC DEVICES

There may be temporary interference from electronic devices such as microwave ovens or other appliances, cordless phones, baby monitors, and security system cameras. Make sure your access point is not positioned too closely to these devices.

MOVE THE COMPUTER AND/OR PRINTER CLOSER TO THE WIRELESS ROUTER

The range of your wireless network depends on many factors, including the abilities of your router and network adapters. If you are having trouble printing, try placing the computer and printer no more than 100 feet apart.

CHECK THE WIRELESS SIGNAL QUALITY

Print the network setup page and check the signal quality. If the signal quality is listed as good or excellent, then another factor is causing the problem.

CHECK YOUR ADVANCED SECURITY SETTINGS

- If you are using MAC address filtering to limit access to your wireless network, then you must add the printer MAC address to the list of addresses allowed to connect to the wireless access point.
- If you set the wireless access point to issue a limited number of IP addresses, then you must change this so that the printer can be added.

Note: If you do not know how to make these changes, then see the documentation that came with the wireless router, or contact the person who set up your wireless network.

MAKE SURE YOUR COMPUTER IS CONNECTED TO YOUR WIRELESS ACCESS POINT (WIRELESS ROUTER)

- See if you have access to the Internet by opening your Web browser and accessing any site.
- If there are other computers or resources on your wireless network, then check to see if you can access them from your computer.

MAKE SURE THAT YOUR COMPUTER AND PRINTER ARE CONNECTED TO THE SAME WIRELESS NETWORK

If the printer is not on the same wireless network as the computer, then you will not be able to print wirelessly. The SSID of the printer must match the SSID of the computer, if the computer is already connected to the wireless network.

- 1 Obtain the SSID of the network that the computer is connected to.
 - a Type the IP address of your wireless access point (wireless router) into the address field of your Web browser.

If you do not know the IP address of the wireless access point:

 - 1 Click , or click **Start** and then click **Run**.
 - 2 In the Start Search or Run box, type **cmd**.
 - 3 Press **Enter** or click **OK**.

The Command Prompt window opens.
 - 4 Type **ipconfig**, and then press **Enter**. Check the Wireless Network Connection section:
 - The "Default Gateway" entry is typically the wireless access point .
 - The IP address appears as four sets of numbers separated by periods, such as 192.168.2.134.
 - b Type the user name and password of the router when prompted.
 - c Click **OK**.

- d** On the main page, click **Wireless** or any other selection where settings are stored. The SSID will be displayed.
- e** Write down the SSID.

Note: Make sure you copy it exactly, including any capital letters.

- 2** Print the printer network setup page.

In the Wireless section, look for **SSID**.

- 3** Compare the SSID of the computer and SSID of the printer.

If the SSIDs are the same, then the computer and the printer are connected to the same wireless network.

If the SSIDs are not the same, then run the utility again to set up the printer on the wireless network used by the computer.

Wi-Fi indicator light is green but the printer does not print (Windows only)

If you have completed the configuration for wireless printing and all of the settings appear to be correct, but the printer does not print, then try one or more of the following:

ALLOW THE WIRELESS INSTALLATION TO COMPLETE

Do not attempt to print, remove the installation CD, or detach the installation cable until you see the Wireless Setup Successful screen.

ENABLE THE PRINTER

Confirm that the printer is enabled:

- 1** Click , or click **Start** and then click **Run**.
- 2** In the Start Search or Run box, type **control printers**.
- 3** Press **Enter**, or click **OK**.
The printer folder opens.
- 4** Right-click the new printer; from the menu, select **Use Printer Online**.
- 5** Close the Printers or Printers and Faxes window and try printing again.

SELECT THE WIRELESS PRINTER

You may need to select the wireless printer from your computer to use the printer wirelessly.

- 1** Click , or click **Start** and then click **Run**.
- 2** In the Start Search or Run box, type **control printers**.
- 3** Press **Enter**, or click **OK**.
The printer folder opens.
- 4** Right-click the printer in the folder with the matching name and model number followed by "(Network)."
- 5** Select **Use Printer Online** from the menu.
- 6** Close the Printers or Printers and Faxes window and try printing again.

SELECT THE WIRELESS PORT

If you have previously set up your printer as a locally attached printer, then you may need to select the wireless printer to use the printer wirelessly.

- 1 Click , or click **Start** and then click **Run**.
- 2 In the Start Search or Run box, type **control printers**.
- 3 Press **Enter**, or click **OK**.
The printer folder opens.
- 4 Right-click the printer, and then select **Properties** from the menu.
- 5 Click the **Ports** tab.
- 6 Locate the selected port. The selected port has a check beside it in the Port column.
- 7 If the Description column of the selected port indicates that it is a USB port, scroll through the list and select the port with Printer Port in the Description column. Check the printer model in the Printer column to make sure you select the right printer port.
- 8 Click **OK**, and then try to print again.

Wi-Fi indicator light is not lit

CHECK POWER

If the Wi-Fi indicator light is off, make sure the  light is on. If the  light is not on, check the following:

- Make sure the printer is plugged in and turned on.
- Make sure the printer is plugged into a working outlet.
- If the printer is plugged into a power strip, make sure it is turned on and working.

Wi-Fi indicator light is still orange

When the Wi-Fi indicator light is orange, it may indicate that the printer is:

- Not configured in infrastructure mode
- Waiting to make an ad hoc connection to another wireless device
- Not connected to a wireless network

The printer may be unable to join the network because of interference, its distance from the wireless access point (wireless router), or until its settings are changed.

These are possible solutions. Try one or more of the following:

CHECK NETWORK NAME

Make sure your network does not have the same name as another network near you. For example, if you and your neighbor both use a manufacturer's default network name, your printer could be connecting to your neighbor's network.

If you are not using a unique network name, consult the documentation for your wireless access point (wireless router) to learn how to set a network name.

If you set a new network name, you must reset the printer and computer SSID to the same network name.

CHECK SECURITY KEYS

If you are using WEP security

A valid WEP key is:

- Exactly 10 or 26 hexadecimal characters. Hexadecimal characters are A–F, a–f, and 0–9.
- or*
- Exactly 5 or 13 ASCII characters. ASCII characters are letters, numbers, and symbols found on a keyboard.

If you are using WPA security

A valid WPA passphrase is:

- From 8 to 63 ASCII characters. ASCII characters in a WPA passphrase are case-sensitive.
- or*
- Exactly 64 hexadecimal characters. Hexadecimal characters are A–F, a–f, and 0–9.

If your wireless network is not using security, then you will not have a security key. Using a wireless network with no security is not recommended because it can allow intruders to use your network resources without your consent.

MOVE THE COMPUTER AND/OR PRINTER CLOSER TO THE WIRELESS ACCESS POINT (WIRELESS ROUTER)

The possible distance between devices in 802.11b or 802.11g networks is 300 feet, while the wireless network range potentially doubles in 802.11n networks. The range of your wireless network depends on many factors, including the abilities of your router and network adapters. If you are having trouble printing, try placing the computer and printer no more than 100 feet apart.

You can find the strength of the network signal on the printer network setup page.

CHECK MAC ADDRESS

If your network uses MAC address filtering, make sure that you include the MAC address of the printer in the MAC address filter list. This will allow the printer to operate on the network.

Wi-Fi indicator light is blinking orange during installation

When the Wi-Fi indicator light is blinking orange, it indicates that the printer has been set up for wireless networking but cannot connect to the network for which it has been configured. The printer may be unable to join the network because of interference, its distance from the wireless access point (wireless router), or until its settings are changed.

These are possible solutions. Try one or more of the following:

MAKE SURE THE ACCESS POINT IS ON

Check the access point and, if necessary, turn it on.

MOVE YOUR ACCESS POINT TO MINIMIZE INTERFERENCE

There may be temporary interference from other devices such as microwave ovens or other appliances, cordless phones, baby monitors, and security system cameras. Make sure your access point is not positioned too closely to these devices.

MOVE THE COMPUTER AND/OR PRINTER CLOSER TO THE WIRELESS ACCESS POINT (WIRELESS ROUTER)

The possible distance between devices in 802.11b or 802.11g networks is 300 feet, while the wireless network range potentially doubles in 802.11n networks. The range of your wireless network depends on many factors, including the abilities of your router and network adapters. If you are having trouble printing, try placing the computer and printer no more than 100 feet apart.

You can find the signal strength of the network on the network setup page.

CHECK YOUR WEP KEY OR WPA PASSPHRASE

A WEP key or WPA passphrase is like a password. All devices on a WEP-secured wireless network must share the same WEP key, and all devices on a WPA-secured wireless network must share the same WPA passphrase.

Note: Make sure you copy it exactly, including any capital letters, and store it in a safe place for future reference.

If you are using WEP security

A valid WEP key is:

- Exactly 10 or 26 hexadecimal characters. Hexadecimal characters are A–F, a–f, and 0–9.
- or*
- Exactly 5 or 13 ASCII characters. ASCII characters are letters, numbers, and symbols found on a keyboard.

If you are using WPA security

A valid WPA passphrase is:

- From 8 to 63 ASCII characters. ASCII characters in a WPA passphrase are case-sensitive.
- or*
- Exactly 64 hexadecimal characters. Hexadecimal characters are A–F, a–f, and 0–9.

If your wireless network is not using security, then you will not have a security key. Using a wireless network with no security is not recommended because it can allow intruders to use your network resources without your consent.

CHECK MAC ADDRESS

If your network uses MAC address filtering, make sure that you include the MAC address of the printer in the MAC address filter list. This will allow the printer to operate on the network. For more information, see “How do I find the MAC address?” on page 101.

PING THE ACCESS POINT TO MAKE SURE THE NETWORK IS WORKING

- 1 If you do not already know it, find the IP address of the access point:
 - a Click , or click **Start** and then click **Run**.
 - b In the Start Search or Run box, type `cmd`.
 - c Press **Enter**, or click **OK**.
The Command Prompt window opens.
 - d Type `ipconfig`, and then press **Enter**.
 - The “Default Gateway” entry is typically the wireless access point.
 - The IP address appears as four sets of numbers separated by periods, such as 192.168.2.134.

2 Ping the access point:

- a** Click , or click **Start** and then click **Run**.
- b** In the Start Search or Run box, type `cmd`.
- c** Press **Enter**, or click **OK**.
The Command Prompt window opens.
- d** Type `ping` followed by a space and the IP address of the wireless access point. For example:
`ping 192.168.1.100`
- e** Press **Enter**.

3 Check to see whether the access point responds:

- If the access point responds, you will see several lines appear that start with “Reply from.”
It is possible that the printer did not connect to the wireless network. Turn off and then restart the printer to try to connect again.
- If the access point does not respond, it will take several seconds and then you will see “Request timed out.”

Try the following:

- a** Click , or click **Start** and then click **Run**.
- b** In the Start Search or Run box, type `ncpa.cpl`, and then press **Enter**.
- c** Press **Enter** or click **OK**.
- d** Select the appropriate connection from the ones shown.
- e** Right-click the connection, and then click **Repair**.

MAKE SURE YOUR COMPUTER CAN COMMUNICATE WITH THE PRINTER

- 1** Obtain the printer IP address by printing a network setup page.
- 2** Click , or click **Start** and then click **Run**.
- 3** In the Start Search or Run box, type `cmd`.
- 4** Press **Enter**, or click **OK**.
The Command Prompt window opens.
- 5** Type `ping` followed by a space and the IP address of the printer. For example:
`ping 192.168.1.100`
- 6** Press **Enter**.
- 7** If the printer responds, you will see several lines that display the number of bytes received from the printer.
This ensures that your computer is communicating with your printer.
If the printer does not respond, then “Request timed out” displays.
 - Your computer might not be connected to the network.
 - You may need to change the settings of your printer. Run the Wireless Setup Utility again.

CONFIGURE THE PRINTER FOR WIRELESS ACCESS AGAIN

If your wireless settings have changed, you must run the printer wireless setup again. Some reasons your settings may have changed include your having manually changed your WEP or WPA keys, channel, or other network settings; or the access point having been reset to factory defaults.

Running the wireless setup again can also resolve issues due to misconfigurations that occurred when configuring the printer for wireless access.

Notes:

- If you change network settings, change them on all the network devices before changing them for the access point.
- If you have already changed the wireless network settings on your access point, then you must change the settings on all the other network devices before you can see them on the network.

- 1 Click  or **Start**.
- 2 Click **All Programs** or **Programs**, and then select the printer program folder from the list.
- 3 Select **Printer Home**.
- 4 Click the **Settings** tab.
- 5 Click the **Wireless setup utility** link.

Note: You may be prompted to connect the printer to the computer again using the installation cable as part of the setup process.

- 6 Follow the instructions on the computer screen.

Wireless print server not installed

You may see a message during installation indicating that the printer does not have a wireless print server installed. If you are sure the printer is capable of wireless printing, try the following:

CHECK POWER

Make sure the  light is on.

"Communication not available" message displays when printing wirelessly

These are possible solutions. Try one or more of the following:

MAKE SURE YOUR COMPUTER AND PRINTER HAVE VALID IP ADDRESSES FOR THE NETWORK

If you are using a laptop and have power saving settings enabled, you may see the "Communication not available" message on your computer screen when you attempt to print wirelessly. This can occur if the laptop hard drive has powered down.

If you see this message, wait a few seconds and then try to print again. The laptop and printer require a few seconds to power up again and reattach to the wireless network.

If you see this message again after you have waited long enough for the printer and the laptop to attach to the network, there may be a problem with your wireless network.

Make sure that the laptop and printer have both received IP addresses:

- 1 Click , or click **Start** and then click **Run**.
- 2 In the Start Search or Run box, type `cmd`.

- 3 Press **Enter**, or click **OK**.

The Command Prompt window opens.

- 4 Type **ipconfig**, and then press **Enter**.

The IP address appears as four sets of numbers separated by periods, such as 192.168.0.100.

How to locate a printer IP address

- You can locate the printer IP address by viewing the printer network setup page.

If the printer and/or the laptop does not have an IP address, or if either has an address of 169.254.x.y (where x and y are any two numbers between 0 and 255):

- 1 Turn off the device that does not have a valid IP address (the laptop, the printer, or both).
- 2 Turn on the device(s).
- 3 Check the IP addresses again.

If the laptop and/or printer still does not receive a valid IP address, there is a problem with your wireless network. Try the following:

- Make sure your wireless access point (wireless router) is turned on and is working.
- Remove any objects that could be blocking the signal.
- Temporarily turn off any unnecessary wireless devices on your network and pause any network-intensive activities, like large file transfers or network games. If the network is too busy, it is possible that the printer is not receiving the IP address within the allowed time.
- Make sure your DHCP server, which may also be your wireless router, is working and is configured to assign IP addresses. If you are not sure how to do this, refer to the manual that came with your wireless router for more information.

If the printer and computer have valid IP addresses and the network is operation correctly, continue troubleshooting.

MAKE SURE THE WIRELESS PORT IS SELECTED

- 1 Click , or click **Start** and then click **Run**.
- 2 In the Start Search or Run box, type **control printers**.
- 3 Press **Enter**, or click **OK**.
The printer folder opens.
- 4 Right-click the printer, and then select **Properties** from the menu.
- 5 Click the **Ports** tab.
- 6 Locate the selected port. The selected port has a check beside it in the Port column.
- 7 If the Description column of the selected port indicates that it is a USB port, scroll through the list and select the port with Printer Port in the Description column. Check the printer model in the Printer column to make sure you select the right printer port.
- 8 Click **OK**, and then try to print again.

MAKE SURE BIDIRECTIONAL COMMUNICATION IS ENABLED

- 1 Click , or click **Start** and then click **Run**.
- 2 In the Start Search or Run box, type **control printers**.
- 3 Press **Enter**, or click **OK**.
The printer folder opens.
- 4 Right-click the printer, and then select **Properties** from the menu.
- 5 Click the **Ports** tab.
- 6 Click the box next to **Enable bidirectional support** if it is not already checked.
- 7 Click **Apply**.
- 8 Click **OK**, and then try to print again.

Resolving intermittent wireless communications issues

You may notice that your printer works for a short time and then stops working, although apparently nothing has changed on your wireless network.

Many different issues can interrupt network communications, and sometimes more than one problem exists at the same time. These are possible solutions. Try one or more of the following:

DISCONNECT FROM ALL VPNs WHEN ATTEMPTING TO USE THE WIRELESS NETWORK

Most Virtual Private Networks (VPNs) allow computers to communicate with only the VPN and no other network at the same time. Disconnect from the VPN before installing the driver on the computer or before running the wireless setup on the computer.

To check if the computer is currently connected to a VPN, open your VPN Client software and check your VPN connections. If you do not have a VPN Client software installed, check the connections manually using the Windows VPN Client.

If you would like to have the ability to connect to your local network and to a VPN at the same time, the system support person for the VPN must enable split tunneling. Be aware that some organizations will not allow split tunneling due to security or technical concerns.

TURN OFF THE WIRELESS ACCESS POINT (WIRELESS ROUTER) AND TURN IT BACK ON AGAIN

ELIMINATE NETWORK CONGESTION

If a wireless network is too busy, the computer and printer may have difficulty communicating with each other. Some causes of wireless network congestion can include:

- Transferring large files across the network
- Networked games
- Peer-to-peer file swapping applications
- Streaming video
- Too many computers on the wireless network at once

ELIMINATE SOURCES OF INTERFERENCE

Common household items can potentially disrupt wireless network communications. Cordless phones (but not cellular phones), microwave ovens, baby monitors, almost any kitchen appliance, wireless surveillance equipment, nearby wireless networks, and any appliance containing a motor can disrupt wireless network communications.

Try turning on any potential sources of interference and see if it causes the problem. If it does, separate your wireless network from the device.

CHANGE THE CHANNEL THE WIRELESS ROUTER USES

You can sometimes eliminate interference from unknown sources by changing the channel your wireless router uses to broadcast. There are three distinct channels on a router. Check the documentation that came with your router to determine which three apply. Other channels are offered as options, but these overlap. If the router is configured to use the default settings, change the channel setting to use a different distinct channel. Refer to the manual that came with your wireless router if you are not sure how to change the channel.

CONFIGURE THE WIRELESS ROUTER WITH A UNIQUE SSID

Many wireless networks use the SSID that the router was originally configured by the manufacturer to use. Using the default SSID can cause problems when more than one network is operating in the same area with the same SSID. The printer or computer may attempt to attach to the wrong network, although it will appear to be trying to connect to the correct network.

To avoid this type of interference, change the SSID on your wireless router from the default. Refer to the manual that came with your router if you are not sure how to change the SSID.

Note: You must change the SSID on all of the other devices that access your wireless network if you change the SSID on the router.

ASSIGN STATIC IP ADDRESSES TO ALL DEVICES IN THE NETWORK

Most wireless networks use a DHCP server (dynamic host configuration protocol) built in to the wireless router to assign IP addresses to clients on the wireless network. DHCP addresses are assigned when they are needed, as when a new device is added to the wireless network or when it is powered on. Wireless devices must send a request to the router, and receive an IP address in response so they can function on the network. Because the router performs many other tasks besides assigning addresses, it sometimes does not respond quickly enough with an address. The requesting device sometimes gives up before it receives an address.

Try assigning static IP addresses to the devices in your network to resolve this issue. Static IP addresses cut down on the work your wireless router has to do. Refer to the manual that came with your router and your operating system documentation if you are not sure how to assign static IP addresses.

To assign a static IP address to the printer, do the following:

- 1 Complete the wireless setup, allowing the printer to receive a DHCP address from a DHCP server on the network.
- 2 Print a network setup page to see what IP address is currently assigned to the printer.
- 3 Open a Web browser and then type the printer IP address in the address field. Press **Enter**.
The printer Web page loads.
- 4 Click the **Configuration** link.
- 5 Click the **TCP/IP** link.
- 6 Click the **Set Static IP Address** link.

7 Type the IP address you want to assign to the printer in the **IP Address** field.

8 Click the **Submit** button.

The Submitting Selection message appears.

Confirm that the IP address is updated by typing the static IP address in the browser address field and checking to see if the printer Web page reloads.

CHECK FOR KNOWN ISSUES WITH THE WIRELESS ROUTER

Some wireless routers have documented defects that were identified and resolved by the manufacturers. Visit the company Web site of the router manufacturer. Check for firmware updates and other advice from the manufacturer. Check the manual that came with your wireless router if you are not sure how to reach the manufacturer Web site.

CHECK FOR WIRELESS ADAPTER UPDATES

If you are having trouble printing from one particular computer, check the Web site of the manufacturer of the network adapter card in that computer. It is possible that there is an updated driver available that could resolve the issue.

CHANGE ALL NETWORK DEVICES TO THE SAME TYPE

While it is possible to successfully mix 802.11b, 802.11g, and 802.11n devices on the same wireless network, the faster devices will sometimes prevent the slower devices from communicating. Wireless devices are designed to wait for a gap in wireless network communications before attempting to send information. If newer, faster devices are constantly using the wireless network, then older, slower devices will not have a chance to send data.

Try only turning on the network devices of the same type and see if network communications improve. If this solves the problem, you may want to upgrade your older devices with newer network adapters.

PURCHASE A NEW ROUTER

If your router is several years old, it may not be fully compatible with the newer wireless devices on your network. Consider purchasing a newer router that is fully compliant with the 802.11 IEEE specifications.
