

User Manual

**DIRECT CALL VIDEO DOORPHONE
FOR 4~14 APARTMENTS**

10. Accessories

- One outdoor camera
- One power box
- Screws
- Indoor monitors(Quantity according to users' requirement)
- Distributors(Quantity according to users' requirement)
- Secondary outdoor cameras(Quantity according to users' requirement)
- Brackets for indoor monitors(Quantity according to users' requirement)

11. Notices

1. Do not install the indoor monitor at high temperature, high humidity place or near TV.
2. No touching the monitor screen with wet hands.
3. Please use only softcloth to clean the monitor screen or camera in order to get a clear image.
4. Please avoid throwing or hitting the units.
5. Image could be illegible if the camera is shined by strong sunlight.

8. Outdoor Camera Installation

Picture One

Picture Two

1. Use the screwdriver to take out the screws on the outdoor camera(Picture One). Separate the front and back cover from each other(Picture Two).

Picture Three

Picture Four

2. The outdoor camera should be better if it is flush mounted. First, dig a hole at a height of 1.4~1.7M with the hole size 310 ×110×25mm. Then fix the back cover in the hole and adjust camera handle to get the best picture effect. Make sure the outdoor station can avoid the direct sunlight (Picture Three and Four) .

9. Secondary Outdoor Camera Installation

1. Press the nameplate lightly and take it off. Then loosen off the screws and take off the back cover.

2. Install the outdoor camera at a height of 1.4m-1.7m, adjust the camera handle to get the best picture effect, and make sure the outdoor camera can avoid the direct sunlight.

3. Fix the bracket of the outdoor camera on the wall with screws.

4. Close the front cover, fix the screws and the name plate.

1. Features

- 1.Oxidation- proof and wearable aluminium alloy outdoor camera with angle adjustable in four directions: up, down, left and right.
- 2.TFT screen with low power consumption, no radiation and high definition.
- 3.Hands free communication. Monitoring the outside and night vision function.
- 4.Fourteen polyphonic melodies.
- 5.Music and talking volume adjustable.
- 6.Supporting 4, 6, 8, 10, 12, 14 apartments system.
- 7.4 kinds of indoor monitors for selection.
- 8.Users can call the host directly through the house number button on outdoor camera.
- 9.Mix-installtion available, that is to say audio or video indoor station up to users' selection.
- 10.Non-stop power source, the storage battery can supply the system when the usual power is off.
- 11.Unlock button can be connected to the outdoor camera.

2. Outdoor Camera Description

Technical Data:

1. Working voltage: DC+18V
2. Woring current: <280mA
3. Quiescent current: <100mA
4. Minium illumination intensity: 0.1LUX
5. Communication time: About 65 Seconds
6. Working temperature: -20℃~60℃
7. Video output: 1VP-P. 75 Ω
8. Visual angle: Adjustable
9. Installation: Flush mount or fix on metal door
1/3 CCD, black and white or color camera selectable, image resolution: 420TVL, automatic light-sensitive, button lighting at night
10. Product size: (H) 330 × (W) 123×(D) 44mm
Flush mount hole size: (H) 310×(W) 110×(D) 25mm

The Secondary Outdoor Station

Technical Data:

1. Working voltage: DC+18V
2. Working current: < 280mA
3. Quiescent current: < 50mA
4. Minium illumination intensity: 0.1LUX
5. Communication time: About 65 seconds
6. Working temperature: -35℃~60℃
7. Video output: 1VP-P. 75 Ω
8. CCD camera with visual angle adjustable
9. Can be connected to electro-lock
10. Installation: surface mount or gate fix
1/3 CCD, black and white or color camera selectable, picture resolution: 420 TVL, automatic light-sensitive, button lighting at night
11. Product size: (H) 112 × (W) 158× (D) 38mm

Operation:

Pressing the CALL and the host can see outside. Pressing the TALK, host can talk with visitors. When talking, pressing the UNLOCK to open the door. When there is no answer from indoor monitor, the ringback will be heard.

7. Indoor Monitor Installation

(Picture One)

(Picture Two)

1. Fix the bracket of the video indoor monitor on the wall with screws (Picture One).
2. Hang the monitor on the bracket after finishing the wire connection. Plug the enclosed adapter into the sockets and connect the monitor (Picture Two).

Operation of Indoor Monitor

Call and Unlock

If one user on line, press UNLOCK button, and “ DU DU ” sound will be heard twice from indoor unit.

When visitor press the CALL, the indoor unit will ring and the visitor's image will be displayed. The host can answer the outdoor unit and talk with the visitor for 65 seconds after pressing the TALK. Press the TALK again to exit at any time. Press the UNLOCK to open the door and image will be close automatically after 2 seconds.

In initial state, press the MONITOR to monitor the outside. The image can lasts for 65 seconds. Press the TALK to talk with the visitor and press again to exit.

Setting of Room No.:

Setting of Room No.:

1. Disconnect the system power supply, and then reconnect.
2. Keep pressing the UNLOCK button on indoor monitor until a sound BI is heard after 2 or 3 seconds
3. Then press the button with correct room number on the outdoor station, and the relevant indoor monitor will ring. This means, room no. setting is finished.

Adjustment:

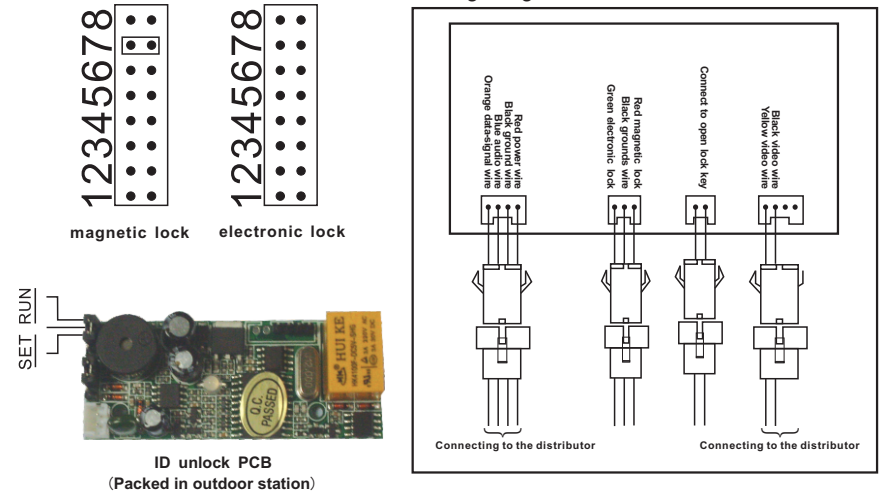

1. Press MONITOR on , music and ring volume can be adjusted through music switch.
2. Brightness, chroma, talking volume can also be adjusted through corresponding switch.
3. VP-F820 adjustment: After pressing the 1, 2, 3, 4 function buttons, monitor would display BRIGHT, CONTRAST, COLOR, and LD. User can adjust the picture brightness, contrast, chroma, and rotation by plus or minus button.
4. In order to reach the best picture result, please take off the protective coating of screen. If you want to set a secondary outdoor station, please choose main gate or secondary gate for monitoring on the mainboard of the floor distributor. For setting details, please refer to floor distributor instructions.

Wiring Diagram of Outdoor Camera

The option of electronic lock and magnetic lock: when the products just be finished in the factory, the way of unlocking is electronic (power for lock) .If you want to use the magnetic lock, just need to keep the connection 7 in short circuit.

Wiring diagram:

ID Function Instruction

1. The kit includes three cards. If need more user cards, please do according to following steps:
 Firstly, use the adding card to touch the ID card touching zone of the outdoor station.
 Secondly, use the user card to touch the same area.
 Thirdly, use the adding card to touch the same area. Then the new user card is added successfully. At most 100 user cards can be added.
2. If need to delete any user cards, please do according to following steps:
Firstly, use the delete card to touch the ID card touching zone of the outdoor station.
Secondly, use the user card to touch the same area.
Thirdly, use the deleting card touching the same area. Then the user card is deleted successfully.
3. The adding card and deleting card are set well already. If the user lost the adding card or deleting card, he or she can re-program a new setting by doing following steps:
Firstly, open the back cover of outdoor station.
Secondly, please turn off the power, and let the ID unlock PCB jumper wire to be SET condition.
Thirdly, turn on the power, and use two ID card to touch the ID card touching zone of the outdoor station accordingly. If there is a long ring sound after the second ID card touching, the re-setting is successfully.
Fourthly, turn off the power, let the jumper wire to be adding card, and the second will be deleting card.

3. Indoor Monitor Description

Technical Data:

1. Talking last time: 65s \pm 10%
2. Monitoring last time: 65s \pm 10%
3. Screen: 7 inch TFT / 8 Inch digital
4. Audio frequency non-distortion power: \geq 50mW
5. Frequency responds to: 300~3400Hz \pm 3dB
6. Working voltage: DC 18V
7. Working temperature: -10°C ~ 40°C
8. Relative humidity: 10%-90% (RH)
9. Installation way: wall surface mount.
10. Indoor monitor dimension:

VP-820: 275 (W) \times 180 (H) \times 22 (D) mm

VP-720: 255 (W) \times 154 (H) \times 18.5 (D) mm

VP-701, 703: 255 (W) \times 165 (H) \times 29 (D) mm

can only cause the disfunction of the relevant unit. The others can still work normally. When the short circuit is corrected, the affected unit will work normally again.

Technical Data:

1. Working voltage: DC+18V
2. Working current: < 20mA
3. Quiescent current: < 50mA
4. Working temperature: -10°C ~ 50°C
5. Distributor size: 157 (W) \times 83 (H) \times 31 (D) mm

Usage:

1. Each distributor is connected with main wires, which are composed of 4-core sheath cable and video cable. As following diagram shows, IN is connected with input main wires from outdoor unit or the previous distributor, whereas OUT is connected with output main wires for next distributor. (Remarks: 4-core sheath cable includes red power wire, black ground wire, blue audio wire and orange data-signal wire; video cable includes black video wire and yellow video wire.)
2. The distributor can be connected with 4 indoor monitors. Connection terminals are shown in the following wiring diagram, extension 1 to 4.
3. K1, K2, K3 and K4 are the secondary outdoor station setups for indoor monitors 1, 2, 3 and 4 respectively. When jumper terminal is connected, indoor monitor will get video signal from the secondary outdoor station; while disconnected, it will be from the first general outdoor station.

5. Power Box Description

Technical Data:

Output voltage: AC220V+10%

Input voltage: DC 18V+10%

Working temperature: -35°C~60°C

Working humidity: < 90%

Wire hole diameter: 20mm

Reserve power battery capacity:
6V/Ah×3(not included)

Maximum output current: 2A

Box size: 255×164×85mm

Installation type: wall surface mount

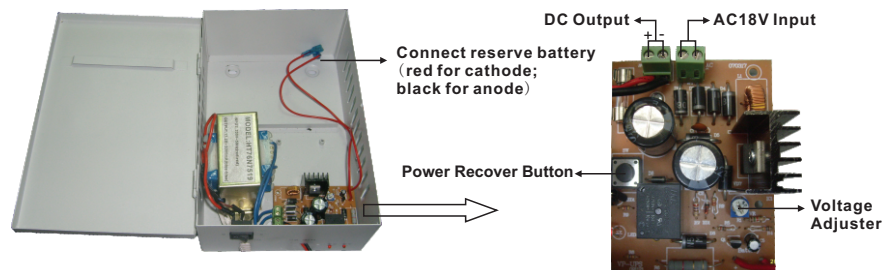

Usage:

Fix the power box in suitable place and connect it to mains supply. The indicator light should be lighted. Then cut off mains supply and make loading wires well connected to each other part; before turn on the reserve battery and mains supply, be sure all the loading wires well connected. Output power is DC 18V and can be adjustable.

Notice: It is suggested that the users install the reserve battery before use.

If the power box does not work normally in case of power cut-off, please press the recover button on the PCB in power box (see following right picture). To prolong the working time, there is only audio communication function after power is cut off. Video unavailable.

6. Distributor Description

In building intercom system, distributor is used to avoid the signal interference among each unit. If one unit is in short circuit because of wrong installation, the other users can use their video door phones normally. The short circuit

Specifications	Model	7 Inch	8 Inch
Parameter			
Screen Size (Inch)		7.0	8.0
