

## **Fiber Optic – Production and Lab Test**

Multiple Application Platform

# Flexible, Dynamic Solution for Comprehensive Optical and Electro-Opticial Testing

The JDSU Multiple Application Platform (MAP) is designed to help manage the test and measurement needs of an industry that requires flexibility and dynamic performance. Our goal is to offer researchers, designers, and manufacturing engineers a platform that exceeds all others with its modularity, reliability, and flexibility.

The optical cassette's breadth and performance are consistent with the fiber optic technology leadership from JDSU. For over 20 years, JDSU has been committed to meeting your physical layer testing challenges.

MAP Console software is an out-of-the-box application. It provides an intuitive, user-friendly environment to ensure that your test and measurement systems can be integrated quickly and efficiently.

#### **Outstanding Support**

JDSU is committed to providing you with the strongest possible application support – a commitment that goes beyond the operation of our products. It extends to understanding the specifics of the measurements you are implementing. We believe in learning from every customer interaction. By combining your measurement experiences with ours and leveraging the flexibility and performance of our products, we can deliver a more powerful solution.

Our goal is to find ways to optimize measurement performance, reduce cycle times and minimize your cost of ownership. Working together, we can create solutions that meet your capital budget and simplify your development, without compromising the performance and the reliability you need to keep your program or factory on track.

Our next generation products are driven by your needs. Throughout our history, we have worked hard to listen to our customers and are eager to explore new ideas and opportunities. They may range from simple product enhancements to new product concepts. We have confidence in our product breadth, but are equally driven to continue to find new ways to add value to your test and measurement applications.

### Targeted Tools-The MAP Solution Selection Guide

#### **MAP Master**

A flexible instrumentation platform ideal for optical or the test and measurement applications. A 19-inch rackmountable chassis featuring: 8-slot capacity, over 15 hot-swappable instrument cassettes, color display, dynamic MAP firmware and console that automatically identifies installed cassettes, reversibility for front/rear access, ActiveX console and drivers with simulation mode.

#### **MAP Benchtop**

Bring the power of MAP to your lab bench!

An economical solution for test sets requiring 3 or fewer instrumentation cassettes.

### The MAP Solution Selection Guide

#### **MAP EDFA**

Available in six configurations: preamplifier, booster, booster-high power, mid-span access booster, in-line and booster-DWDM. Features a low noise figure, high output power and high gain. Currently the high power booster model offers an output of 21 dBm.

Page 13

#### **MAP Polarization Controller**

An efficient and precise polarization controller that can create any state of polarization. May also be used as part of a polarization state analyzer.

Page 19

#### **MAP Precision Attenuator with Power Control**

A high resolution, wide wavelength range attenuator. Available with 1 or 2 devices per cassette, single-mode or multimode fiber, four standard connector types, and tap option or power control feature.

Page 16

#### **MAP Variable Backreflector**

Provides precise levels of return loss (RL) to transmitters allowing measurements of system sensitivity or system degradation as a function of backreflection. Available in single-mode or multimode and with an optional coupler for monitoring.

Page 21

#### **MAP Tunable Grating Filter**

A tunable bandpass filter that offers continuous wavelength tuning from 1420 to 1630 nm. The standard model has a maximum input power of 300 mW and the high power option provides a maximum input power of 1000 mW.

Page 24

#### **MAP Broadband Source**

Offers an amplified spontaneous emission (ASE) output that features flattened high power density across the C-band or C+L-band. The source provides high spectral stability.

Page 32

Features accuracy, high linearity and extremely low polarization dependent loss (PDL). Incorporates a standard analog output. Model with 10 mm detector adapter may be used with up to 72 channel multimode ribbon fibers

Page 28

#### **MAP DFB Laser**

May be used to create an ITU grid in which optical frequency represented by a DFB laser corresponds to the transmitter in the optical network. Can be selected to comply with the 50 GHz ITU grid in the C-band and L-band (1527 to 1610 nm) wavelength ranges.

Page 35

### The MAP Solution Selection Guide

#### MAP DFB Laser - Analog Modulation

Offers 1 GHz of modulation bandwidth from front panel connector. Designed to meet the needs of CATV test. Low distortion ensures accurate CATV receiver test.

Page 39

#### **MAP Fabry-Perot Laser**

Designed to produce a stable light source at desired wavelength. Offers optimal stability and features such as built-in internal and external modulation capabilities, and variable power control.

Page 42

#### **MAP LED Source**

A high-power Light Emitting Diode (LED)-based light source with variable output power.

Page 45

#### **MAP Tunable Laser**

An external cavity tunable diode laser that offers exceptional speed, accuracy and flexibility at a competitive price.

**MAP Small Channel Count** 

A low-cost switch allowing for a number

of configurations. The switch is bidirec-

tional, transparent to signal format, and

available in both single-mode and mul-

Page 47

Switch

Page 52

#### MAP Large Channel Count Switch

A bidirectional switch, allowing the connection of a common port to any number of channels up to 50. Available in single or dual-switch configurations. Exhibits low insertion loss and high return loss.

Page 49

#### **MAP RF Switch**

A 50 Ohm coaxial switch for routing RF and microwave signals at frequencies up to 26.5 GHz.

Page 55

### **MAP Utility**

timode versions.

Simplifies the mechanical integration of passive optical components for test sets. Highly configurable, contains passive optical devices such as splitters and taps. Supports angle or flat polish connectors as well as single-mode and multimode fibers.

Page 57

### The MAP Solution Selection Guide

#### **Application Reference Table**

The MAP system of products addresses standard testing requirements in addition to evolving testing challenges. See the table below for a sampling of tests and the appropriate measurement equipment. Refer to the Test and Measurement Reference section for a comprehensive guide to test and measurement applications.

MAP Master

#### Key Features

- Hot-swappable cassettes (cassettes can be inserted or removed without powering down)
  - Dynamic MAP firmware and console that automatically identifies installed cassettes
  - PC-based MAP Console program with drivers, ActiveX, Dynamic link libraries (DLL), LabVIEW and simulation mode
  - Color display
  - RS-232 and GPIB interface

MAP Benchtop

#### Applications

- Periodic reconfiguration and/or expansion capability
- High reliability/availability in a 24/7 manufacturing environment

#### **Safety Information**

- Optical source cassettes, when installed in the MAP chassis, meet the requirements of standard IEC 60825-1(2002) and comply with 21 CFR 1040.10 except deviations per Laser Notice No. 50, July 2001
- CE Compliance plus UL3101-1 and CAN/CSA-C22.2 No. 1010.1

The Multiple Application Platform (MAP) is a flexible instrumentation platform used for optical test and measurement applications. It is available in two formats: a 19-inch 8-slot Master (MAP+2M00) and a 9.5-inch 3-slot Benchtop (MAP+2B00). They feature a common hot-swappable backplane compatible with over 15 different types of instrumentation cassettes.

The MAP Master and MAP Benchtop include a 9-key keypad, color display and remote communication ports.

#### **Chassis Selection**

MAP is used when instrumentation selection needs to be based on current requirements without compromising future requirements. The MAP+2B00 and MAP+2M00 provide the most cost-effective solutions for test sets requiring three or fewer cassettes and four to eight cassettes respectively. In both cases, future expansions are possible by populating the empty slots (if available) or adding a second independent MAP+2B00 or MAP+2M00.

**MULTIPLE APPLICATION PLATFORM** 

#### MAP Master (MAP+2M00)

The MAP Master is built on a fully modular architecture. The main controller module, power supply module, keypad/display module and remote interface module are all field replaceable, thus making maintenance fast and simple. The keypad/display module and remote interface module of the MAP Master is interchangeable for rear mounting. Handling and rackmounting are made easy by using the practical handles located at the front and back of each chassis. When used on a bench, the tilting feet hold the chassis at an optimal angle for monitor visibility and keypad accessibility.

#### **Key Features**

#### • Front or back fiber connection

- 8-slot capacity
- All modules are field replaceable:
  - controller
  - power supply
  - keypad/display
  - remote interface

#### MAP Benchtop (MAP+2B00)

The MAP Benchtop brings the MAP products to your lab bench without compromising performance. Its form factor and lower cost make it ideal for small test-sets. When test needs grow, software applications developed for the MAP Benchtop can be transferred to a MAP Master without any modifications.

**Key Features** 3-slot capacity

• compatible with external USB keyboard

Rear

Rear

#### Software

#### Intuitive MAP Console and Drivers

MAP is supplied with comprehensive PC-based instrument drivers and MAP Console for added functionality. Drivers supplied include ActiveX, DLL, and LabVIEW. These provide full control of the cassettes and are compatible with all the standard Automation Development Environments (ADEs) including LabVIEW, Visual Basic<sup>™</sup>, and TestPoint<sup>™</sup>. These drivers provide drop-in instrument programming capabilities, allowing test programmers to focus on test level functions and sequences rather than the details required to communicate with the specific cassettes in the MAP system. During test execution, the MAP Console can also be placed in a supervisory mode and used to monitor and control the MAP platform to help support troubleshooting and to minimize downtime. The MAP Console comes with a built-in simulator allowing Automation Developers to capture system configurations who do most of their development off-line, freeing real hardware for other purposes. These features make test automation development and debugging fast and easy.

### MAP Erbium-Doped Fiber Amplifier EDFA Series

Key Features

- High output power and gain
  - Low noise figure
  - Monitoring and alarms

For stand-alone applications, the MAP EDFA may be used as a benchtop

#### Applications

- In-line, pre-amp and booster amplifier emulation
- Dense wavelength division multiplexing (DWDM) transmission for multi-channel applications
- SONET/SDH systems for single channel applications
- Optical signal to noise ratio (OSNR) experiments

#### **Safety Information**

This optical source cassette, when installed in the MAP chassis, complies to CE requirements plus UL3101-1 and CAN/CSA-C22.2 No.1010.1, meets the requirements of Class 3B in standard IEC 60825-1 (2002), and complies with 21 CFR 1040.1 except deviations per Laser Notice No.50, July 2001.

> INVISIBLE LASER RADIATION AVOID EXPOSURE TO BEAM CLASS 3B LASER PRODUCT (IEC 60825-1, 2002) MAX. 500 mw, 700-1680 nm

The Multiple Application Platform (MAP) Erbium-Doped Fiber Amplifier (EDFA) Cassette combines the optical performance of the traditional JDSU EDFA benchtop models, with the flexibility and modularity of the MAP. Nine standard configurations are available to meet your needs. The MAP EDFA has a saturated output power ranging from 14 dBm to 21 dBm, features noise figures as low as 3.3 dB and has gain flatness better than 1.4 dB. The MAP EDFA's are available for operation in the C- or L-band.

The MAP EDFA models provide specialized variants and optical performance not available in the Benchtop EDFA line. Additional EDFA models are available in the Benchtop EDFA product line for applications requiring higher saturated power or operation in the C+L-band.

Note: All specifications guaranteed at 1550 nm and at 23 °C.

1. Saturated Output Power measured:

at 1550 nm at  $P_{in} = -4 \text{ dBm}$ 

at 1550 nm at  $P_{in}$  = -6 dBm for model 1546

at 1550 nm at  $P_{in}$  = -4 dBm (mid-span) for models 1550, 1552, 1554, 1558

at 1590 nm at  $P_{in} = -4 \text{ dBm} \text{ (mid-span)}$  for models 1590 , 1592, 1594

2. Noise figure measured:

at  $P_{in} = -6 \text{ dBm}$  (pre-amp) for model 1546

at  $P_{in} = -30 \text{ dBm}$  for model 1550

at  $P_{in} = -4 \text{ dBm}$  for models 1552,1558,1592

at P<sub>in</sub> = -20 dBm for models 1554, 1590, 1594

3. Small signal gain measured:

at Pin = -6 dBm for model 1546

at  $P_{in} = -30 \text{ dBm}$  for model 1550

at P<sub>in</sub> = -20 dBm for model 1552,1554,1590,1592,1594

at  $P_{in} = -4$  dBm for model 1558

4. Flatness optimized:

for  $P_{in} = -4 \text{ dBm}$  for model 1558 for  $P_{in} = -6 \text{ dBm}$  for model 1546

### **MAP Precision Attenuator**

- Low insertion loss (IL)  $\leq$  1.5 dB
  - Low polarization dependent loss (PDL) 0.05 dB
  - Wide wavelength range
  - High return loss (RL)  $\varnothing$  60 dB

For stand-alone applications, the MAP Precision Attenuator may be used as a benchtop

#### Applications

- Dense wavelength division multiplexing (DWDM) channel equalization (up to 128 channel /controller address)
- Amplifier characterization
- Bit error rate (BER) testing
- Precise optical power control  $(\pm 0.01 \text{ dB})$
- Loss simulation in DWDM fiber links
- Receiver and transmitter testing

#### **Safety Information**

• This cassette, when installed in a MAP chassis, complies to CE requirements plus UL3101-1 and CAN/CSA-C22.2 No. 1010.1

The Multiple Application Platform (MAP) Precision Attenuator is a high resolution, wide wavelength range attenuator used in applications such as analog systems and high bit-rate digital systems. The attenuator is built on proven industry leading technology for maximum reliability and performance.

Many configurations are available: single or dual device per single width cassette, single-mode (SM) or multimode (MM) fiber, four standard connector types, and tap option or in-line power monitor feature. The power control option can function as an in-line power monitor.

#### Continued

#### **Application: Controlling Output Power**

One of the primary applications of an attenuator is to create a precise signal of known output power. With the MAP Precision Attenuator, three options are possible:

- A standard attenuator. To control output power, measurement of the input power is required prior to testing. Output power is externally calculated based on the set attenuation. Figure (a) shows a standard attenuator.
- A standard output tap. Calibration of the output power is achieved through use of an external power meter and calibration of the tap path loss. Adjustments for changes in input power require external adjustments of the attenuator. Figure (b) shows the implementation of the standard output tap.
- An internal in-line power monitor. Output powers can be set directly with internal calibration and monitoring compensating for input power and path losses. In addition, the unit may be set into a closed-loop mode where out put power is dynamically controlled. Figure (c) shows the internal in-line power monitor.

For stand-alone applications, the MAP Polarization Controller may be used as a benchtop

#### Applications

- Passive component PDL and polarization mode dispersion (PMD) measurements
- EDFA noise and polarization dependent gain (PDG) measurements
- 10 GbE transceiver worst-case relative intensity noise and dispersion penalty measurements
- Optical signal to noise ratio (OSNR) and extinction ratio (ER) measurements

#### **Safety Information**

• This cassette, when installed in a MAP chassis, complies to CE requirements plus UL3101-1 and CAN/CSA-C22.2 No. 1010.1.

Key Features

- Complete polarization control
  - Designed to meet IEEE Std. 802.3aeTM 10 GbE testing requirements
  - Designed to perform fast polarization dependent loss (PDL) measurements (4-state Mueller method)
  - Compact single width cassette
  - Very high angular accuracy and absolute fast axis alignment accuracy

The Multiple Application Platform (MAP) Polarization Controller Cassette provides an efficient and precise way of creating any state of polarization. It can also be used as part of a polarization state analyzer.

The single width MAP Polarization Controller Cassette is comprised of three rotating elements: a high extinction ratio polarizer, a quarter-wave plate and a half-wave plate. Each element can be controlled locally from the MAP local interface or remotely through the RS-232 or GPIB. The controller configuration can be offered with a single-mode (SM) or a polarization maintaining fiber (PMF) input.

The polarization controllers can be combined with other instruments to complete measurement test systems such as erbium-doped fiber amplifier (EDFA) or passive component test sets.

#### Specifications

### **MAP Variable Backreflector**

For stand-alone applications, the MAP Variable Backreflector may be used as a benchtop

#### Applications

- Transmitter/receiver development and testing
- Reflection testing for connectors
- Quality assurance acceptance testing
- Laser development and production

#### **Safety Information**

• This cassette, when installed in a MAP chassis, complies to CE requirements plus UL3101-1 and CAN/CSA-C22.2 No. 1010.1.

Key Features • 0.01 dB resolution

- Operation at 850/1310 or 1310/1550 nm
- SM or MM fiber

The Multiple Application Platform (MAP) Variable Backreflector Cassette provides precise levels of return loss (RL) to transmitters, which allows measurements of system sensitivity or system degradation as a function of backreflection.

When used with a transmitter/receiver pair and characterization equipment, the backreflector can be used to establish the magnitude of reflections that significantly degrade transmission system performance, and to characterize the problems they cause.

The backreflector uses JDSU's linear attenuator prism and high reflectivity mirror to precisely control the level of RL. The cassette is available in single-mode (SM) or multimode (MM) fibers and with an optional coupler for monitoring.

### Figure 1: Optical Configurations for the Variable Backreflector Cassette

**Key Features** 

- Narrow bandwidth
  - Low polarization dependent loss (PDL) (< 0.3 dB)
  - Wide wavelength range (1420 to 1630 nm)
  - High power input (1 W)

For stand-alone applications, the MAP Tunable Grating Filter may be used as a benchtop

#### Applications

- Spontaneous emission suppression
- Amplifier characterization (Up to 1 W of input power)
- BER testing
- · Tunable laser based testing

#### **Safety Information**

• This cassette, when installed in a MAP chassis, complies to CE requirements plus UL3101-1 and CAN/CSA-C22.2 No. 1010.1

The Multiple Application Platform (MAP) Tunable Grating Filter Cassette is a tunable bandpass filter that offers continuous wavelength tuning from 1420 to 1630 nm. It is used for applications requiring low insertion loss (IL), high rejection, narrow bandwidth and wavelength tuning resolution of 0.005 nm. The standard model has a maximum input power of 300 mW and the high power option provides a maximum input power of 1000 mW.

Three options are available:

- the peak search option, used to find the absolute maximum transmission power within the filter's wavelength tuning range or a local maximum transmission power within a user-defined wavelength range
- 10% tap option for power monitoring
- 50% tap option for power monitoring.

MAP Tunable Grating Filter Cassette is ideal for applications where the user needs to suppress amplified spontaneous emissions (ASE) or isolate specific wavelengths. These applications include amplifier characterization, bit error rate (BER) testing and optical signal to noise ratio (OSNR) measurement.

The MAP Tunable Grating Filter Cassette is the next generation replacement of the Benchtop Tunable Grating Filter (TB9 series).

The filter makes use of a diffraction grating to separate the input light along several discrete paths. A stepper-motor rotates the grating to transmit the desired wavelength along the output fiber.

### **MAP Power Meter**

3 mm InGaAs Power Meter with Dual Detector Configuration

For stand-alone applications, the MAP Power Meter may be used as a benchtop

#### Applications

- Dense wavelength division multiplexing (DWDM) channel measurements (Up to 128 channels/controller addresses)
- Amplifier characterization (Up to 2 W of input power)
- Bit error rate (BER) testing
- Precise optical power control  $(\pm 0.01 \text{ dB})$
- Receiver and transmitter testing

#### **Safety Information**

• This cassette, when installed in a MAP chassis, complies to CE requirements plus UL3101-1 and CAN/CSA-C22.2 No. 1010.1

Key Features • Low PDL (< 0.01 dB)

- Wide wavelength range (800 to 1650 nm)
- High power option (2 W)
- Dual detector option
- Bare fiber measurements capability

JDSU offers two types of Multiple Application Platform (MAP) Power Meter Cassettes. The first is a power meter with a 3 mm InGaAs detector and the second is a power meter with 10 mm Ge detector.

#### 3 mm InGaAs MAP Power Meter

The Power Meter is optimized for applications using single-mode (SM) or multimode (MM) fiber to measure power levels from - 80 to 10 dBm over the wavelength range of 800 to 1650 nm. It features a high accuracy, high linearity and extremely low polarization dependant loss (PDL). The MAP Power Meter Cassette with 3 mm InGaAs detector is available in single or dual configuration and comes with an analog electrical output for external monitoring. The averaging time can be set as low as 100 µs for high-speed applications.

For ultimate flexibility, the detector heads were designed with the JDSU AC100 interchangeable detector adapters. Detector adapters are available for six connector types as well as a fiber holder that permits bare fiber measurements (please refer to the Optional Accessories section). The cassette is supplied with an FC detector adapter as a standard accessory. An optional integrating sphere may be fastened to the front panel allowing for increased power measurement capability to 33 dBm (2 W) with decreased PDL to 0.005 dB.

#### 10 mm Ge MAP Power Meter

This versatile power meter can be used in applications using standard SM or MM fiber as well as SM or MM ribbon cable with fiber counts as high as 72 (see Specifications for further details). The power meter can accurately measure power levels from -50 to 3 dBm over the wavelength range of 800 to 1650 nm.

The detector heads are compatible with the JDSU AC400 series interchangeable detector adapters (please refer to the Optional Accessories section). The cassette is supplied with an FC detector adapter as a standard accessory.

**MAP POWER METER** 

Dual Detector Power Meter with an Integrating Sphere on Detector 2

10 mm Ge Power Meter

3. Reference condition: CW laser with P = -10 dBm; Wavelength 1550 nm; FWHM < 10 nm; SM fiber with single channel FC connector adapter; Ambient temperature 25 ± 3 °C.

4. Operating conditions: NA of fiber ≤ 0.27 Temperature, humidity and power ranges: as specified. For FC/APC connector N/A = 0.27 add 1 %.

5. For wavelengths >1600 nm and temperatures > 35 °C add 1.0 %.

6. Polarization: Polarization states at fixed wavelength ( $1550 \pm 30 \text{ nm}$ ) and constant power; Straight connector; T =  $23 \pm 5 \text{ °C}$ .

7. Ripple:  $1545 \le \lambda \le 1565$  nm; Fixed state of polarization; Constant power; Straight connector; T =  $23 \pm 5$  °C.

8. For 3 dBm > P > -30 dBm.

9. RL: At 1310 nm and 1550 nm; 8 ° angled connector; T = 23  $\pm$  5 °C.

10. Noise: Averaging time 1 s; Observation time 300 s; Wavelength 1550 nm; T = 23  $\pm$  5 °C.

#### Integrating Sphere Specifications

Parameter	AC330
Attenuation at reference <sup>1</sup>	-30.7 ± 0.8 dB
Spectral range	800 to 1650 nm
Wavelength flatness <sup>2</sup>	< ± 1.5 dB
RL <sup>3</sup>	> 65 dB (typical)
Relative uncertainty <sup>4</sup>	$< \pm 0.05 \text{ dB}$
Residual polarization dependent loss (PDL) <sup>5</sup>	< 0.005 dB
Maximum power <sup>6</sup>	+ 33 dBm (2 W)
Operating temperature	10 to 40 °C, RH 15 % to 70 %
Storage temperature	-30 to 60 °C, RH 15 % to 95 % non-condensing

1. Measured with wavelength of 1550 nm at 23  $\pm$  5°C and RH = 50% with straight connector.

2. From 850 nm to 1650 nm, refer to the wavelength of 1310 nm.

3. Measured at 1310 nm and 1550 nm with SM fiber and FC/APC connector.

4. At reference condition, with 8 degree angled connector, due to the polarization and interference.

5. Measured at 1550 nm.

6. Continuous Wave (CW) laser.

For more information on this or other products and their availability, please contact your local JDSU account manager or JDSU directly at 1-800-498-JDSU (5378) in North America and +800-5378-JDSU worldwide or via e-mail at customer.service@jdsu.com.

#### Sample: MAPM+2PS12

1. Not applicable if a 10 mm detector has been ordered for detector

2. A Dual 10 mm Ge detector cannot be ordered.

#### **Optional Accessories**

#### 3 mm InGaAs MAP Power Meter

Product Code	Description		
AC100	Detector cap		
AC101	FC detector adapter		
AC102	ST detector adapter		
AC103	SC detector adapter		
AC112	MT ribbon cable adapter		
AC114	MU detector adapter		
AC115	E2000 detector adapter		
AC120	Magnetic fiber holder (requires AC121)		
AC121	Single bare fiber plug (requires AC120)		
AC330	+33 dBm integrating sphere		

#### 10 mm InGaAs MAP Power Meter

Product Code	Description	
AC400	Detector cap	
AC401	FC/PC adapter	
AC402	MPO/MTP adapter

### **MAP Broadband Source**

For stand-alone applications, the MAP Broadband Source may be used as a benchtop

#### Applications

- Optical component spectral tests
- Systems compliance tests
- Optical measurement systems
- Sensor and imaging experiments

#### **Safety Information**

• This optical source cassette, when installed in the MAP chassis, complies to CE requirements plus UL3101-1 and CAN/CSA-C22.2 No.1010.1, meets the requirements of Class 3B in standard IEC 60825-1 (2002), and complies with 21 CFR 1040.1 except deviations per Laser Notice No.50, July 2001.

> INVISIBLE LASER RADIATION AVOID EXPOSURE TO BEAM CLASS 3B LASER PRODUCT (IEC 60825-1, 2002) MAX.500 mw, 700-1680 nm

Key Features

- Flattened output power spectrum
  - High output power density
  - High spectral stability
  - Control and monitoring features

The Multiple Application Platform (MAP) Broadband Source (BBS) Cassette combines the optical performance of the JDSU BBS benchtop instruments with the flexibility and modularity of the MAP.

Utilizing the latest advances in erbium technology, the MAP BBS offers an amplified spontaneous emission (ASE) output that features flattened high power density across the C-band or C+L-band. The source provides high spectral stability.

The addition of the BBS Cassette can be used for many applications including OSNR (optical signal to noise ratio) experiments, calibration of test equipment, and noise source for active or passive component testing.

The MAP BBS models provide specialized variants and optical performance not available in the Benchtop BBS. Additional BBS models are available in the Benchtop BBS product line for applications requiring higher output power.

#### Spectral Density Plot MAPB+1E1550 C-band 50 mW

Spectral Density Plot MAPB+1E1560 C+L-band 20 mW

Parameter	1550 50 mW Output Power	1550 100 mW Output Power	1560 20 mW Output Power	
Operating wavelength range	1527 to 1568 nm	1525 to 1568 nm	1525 to 1610 nm	
Total optical power (minimum) <sup>1</sup>	50 mW	100 mW	20 mW	
Spectral gain flatness (maximum) <sup>2</sup>	1.6 dB	1.6 dB	2.5 dB	
Total output power stability	0.02 dB			
Output isolation (minimum)		45 dB		
Operating temperature		0 to 50 °C		
Storage temperature		-30 to 60 °C		
Humidity	Maximum 95 % RH non-condensing from 0 to 45 °C 4.06 x 13.24 x 39.5 cm 2.3 kg			
Dimensions (W x H x D)				
Weight				

1. Measured at 1550 nm at 23  $^{\rm o}{\rm C}$  after one hour warm up.

2. Flatness range 1529 to 1565 nm for 1550 model and 1526 to 1603 nm for 1560 model.

#### **Ordering Information**

#### Sample: MAPB+1E1550FP0

If the configurations available do not meet your performance requirements, please contact our global sales and customer service team to discuss the potential for specialized solutions.

### **MAP DFB Laser**

For stand-alone applications, the MAP DFB Laser may be used as a benchtop

#### **Key Features**

- One or two DFB laser(s) per cassette
  1.5 nm of wavelength tuning range
- 10 or 20 mW output power
- 200 Hz to 400 kHz modulation
- 50 GHz wavelength spacing
- Single-mode fiber (SMF) and polarization maintaining fiber (PMF) output available

#### Applications

- DWDM transmission testing
- Optical amplifier testing
- Fiber characterization

#### **Safety Information**

• This optical source cassette, when installed in the MAP chassis, complies to CE requirements plus UL3101-1 and CAN/CSA-C22.2 No.1010.1, meets the requirements of Class 3B in standard IEC 60825-1(2002), and complies with 21 CFR 1040.1 except deviations per Laser Notice No.50, July 2001.

> INVISIBLE LASER RADIATION AVOID EXPOSURE TO BEAM CLASS 3B LASER PRODUCT (IEC 60825-1, 2002) MAX. 500 mw, 700-1680 nm

The Multiple Application Platform (MAP) Distributed Feedback (DFB) Laser Cassette is an excellent source for dense wavelength division multiplexing (DWDM) system testing. A combination of DFB lasers may be used to create an ITU grid in which optical frequency represented by a DFB laser corresponds to the transmitter in the optical network. The standard MAP DFB Laser can be selected to comply with the 50 GHz ITU grid in the C- and L-band (1527 to 1610 nm). The lasers typically show a side-mode suppression ratio of 40 dB and can be modulated internally from 0.2 to 400 kHz in square, sinusoidal and triangular waves.

Parameter

# Specification

Wavelength	
Range	ITU grid C+L-band (see Channel Code Grid)
Accuracy	± 0.03 nm
Stability 15 minutes <sup>1, 2, 3</sup>	± 0.005 nm
Stability 24 hours <sup>1, 2, 3</sup>	± 0.01 nm
Tuning range	Ø 1.5 nm
Resolution	0.01 nm
Power	
Laser output <sup>4</sup>	10 or 20 mW
Laser power uncertainty <sup>3</sup>	± 5 %
Stability 15 minutes <sup>1, 2, 3</sup>	$\pm$ 0.005 dB
Stability 24 hours <sup>1, 2, 3</sup>	± 0.03 dB
Resolution <sup>5</sup>	0.01 dB
Attenuation range	10 dB
Internal modulation	
Range <sup>6</sup>	0.2 to 400 kHz
Depth	0 to 100%
Duty cycle	15 to 85%
Function	Square, Sinusoidal and Triangular
Spectral properties	
Width coherence control off	< 30 MHz
Width coherence control on	Ø 500 MHz
Side mode suppression ratio (SMSR)	> 40 dB
Optical signal to noise ratio (OSNR)	30 dB
(peak to maximum background)	
Optical isolation	30 dB
Relative intensity noise (RIN)	-140 dB/Hz
Recommended calibration period	1 year
Operating temperature	10 to 40 °C
Storage temperature	-30 to 60 °C
Dimensions (W x H x D)	4.06 x 13.24 x 39.5 cm
Weight	0.5 kg

1. At full power.

2. After 1 hour warm-up.

3. Constant temperature within 25  $\pm3$  °C.

4. Not including options.

5. For maximum power to (maximum power - 8 dB).

6. Nominal duty cycle is accurate from 0.2 to 100 kHz. Analog modulation bandwidth is 400 kHz.

For stand-alone applications, the MAP DFB Laser may be used as a benchtop

## **Applications**

- CATV reference transmittter
- Multitone receiver test

## **Safety Information**

• This optical source cassette, when installed in the MAP chassis, complies to CE requirements plus UL3101-1 and CAN/CSA-C22.2 No.1010.1, meets the requirements of Class 3B in standard IEC 60825-1(2002), and complies with 21 CFR 1040.1 except deviations per Laser Notice No.50, July 2001.

> INVISIBLE LASER RADIATION AVOID EXPOSURE TO BEAM CLASS 3B LASER PRODUCT (IEC 60825-1, 2002) MAX. 500 mw, 700-1680 nm

Key Features • 10 mW output power

- 1 GHz of modulation bandwidth
- Very low second and third order distortion

Multiple Application Platform (MAP) DFB Laser Cassette with Analog Modulation features 1 GHz of modulation bandwidth and low distortion for accurate CATV receiver testing. The cassette features a built-in laser-bias driver and thermo-electric cooler controller for optimal wavelength and power stability.

The radio frequency (RF) modulation is applied through an SMA connector (50 Ohm impedance) on the front panel of the cassette. The RF path is an unamplified connection directly to the laser through an integrated bias-T.

Parameter

Specification

Maximum radio frequency (RF) input power	+13 dBm
Wavelength	1550.1 nm
Wavelength accuracy	± 0.1 nm
Laser peak output power	10 dBm
Laser power uncertainty <sup>1,2,3</sup>	± 5 %
Stability 24 hours <sup>1,2,3</sup>	± 0.1 dB
Side mode suppression ratio (SMSR)	> 30 dB
Optical isolation	> 30 dB
Optical return loss (RL)	> 40 dB
Relative intensity noise (RIN)	< -157 dB/Hz
Recommended calibration period	1 year
Spectral linewidth	< 3.0 MHz
Bandwidth	1 GHz
Second order distortion <sup>4</sup>	< -34 dBc
Third order distortion <sup>4</sup>	< -44 dBc
Operating temperature	10 to 40 °C
Storage temperature	-30 to 60 °C
Dimensions (W x H x D )	4.06 x 13.24 x 39.5 cm
Weight	0.5 kg

1. At full power.

2. After one hour warm-up.

3. Constant temperature within  $25 \pm 3^{\circ}$ C.

4.  $I_F = I_{op}$ , 35% OMI, F1= 595.25 MHz, F2=553.25 MHz.

# **MAP Fabry-Perot Laser**

- Dual independent sources available in a single cassette
  - Control and monitoring features
  - Single-mode (SM)/Multimode (MM) output
  - Internal/external modulation

For stand-alone applications, the MAP Fabry-Perot Laser may be used as a benchtop

## Applications

- Insertion loss (IL)
- Return loss (RL)
- Polarization dependent loss (PDL) tests
- Dense wavelength division multiplexing (DWDM) test

## **Safety Information**

• This optical source cassette, when installed in the MAP chassis, complies to CE requirements plus UL3101-1 and CAN/CSA-C22.2 No.1010.1, meets the requirements of Class 3B in standard IEC 60825-1(2002), and complies with 21 CFR 1040.1 except deviations per Laser Notice No.50, July 2001.

The Multiple Application Platform (MAP) Fabry-Perot Laser Cassette consists of a Fabry-Perot laser diode combined with a high performance laser driver circuitry for optimal wavelength and power stability. It features internal and external modulation capabilities and variable power control. Cassettes can be configured with two independent sources for maximum instrumentation density.

For stand-alone applications, the MAP LED Source may be used as a benchtop

## Applications

- Optical component spectral tests
- Systems compliance tests
- Sensors and imaging

#### **Safety Information**

• This optical source cassette, when installed in the MAP chassis, complies to CE requirements plus UL3101-1 and CAN/CSA-C22.2 No.1010.1, meets the requirements of Class 3B in standard IEC 60825-1(2002), and complies with 21 CFR 1040.1 except deviations per Laser Notice No.50, July 2001.

> INVISIBLE LASER RADIATION AVOID EXPOSURE TO BEAM CLASS 3B LASER PRODUCT (IEC 60825-1, 2002) MAX. 500 mw, 700-1680 nm

Key Features

- Dual independent sources available in a single cassette
  - Control and monitoring features
  - Single-mode (SM)/Multimode (MM) output
  - Internal/external modulation circuitry

The Multiple Application Platform (MAP) Light Emitting Diode (LED) Source Cassette is a high-power LED based light source with variable output power. High output power and excellent wavelength stability, combined with built in modulation circuitry, make this light source suitable for wavelength division multiplexing (WDM) component manufacturing and testing. Other applications of this device include sensing, spectroscopy and amplified spontaneous emissions (ASEs) loading for optical signal to noise ratio (OSNR) measurements.

# **MAP Tunable Laser**

For stand-alone applications, the MAP Tunable Laser may be used as a benchtop

## **Applications**

- Dense wavelength division multiplexing (DWDM) transmission testing
- Optical amplifier testing
- Fiber characterization
- Transmitter and receiver testing

#### **Safety Information**

This optical source cassette, when installed in the MAP chassis, complies to CE requirements plus UL3101-1 and CAN/CSA-C22.2 No.1010.1, meets the requirements of Class 3B in standard IEC 60825-1 (2002), and complies with 21 CFR 1040.1 except deviations per Laser Notice No.50, July 2001.

### Key Features • Low ASE

- > 110 nm of tunable range over C+L-band
- + 8 dBm peak output power
- Polarization maintaining fiber (PMF) output
- Tuning speed up to 100nm/s
- Mode-hop-free

The Multiple Application Platform (MAP) Tunable Laser Cassette is a low ASE external cavity tunable diode laser that offers exceptional speed, accuracy and flexibility at a competitive price, making it the ideal source for advanced fiberoptic systems and component testing.

The wide wavelength range enables testing over the entire C+L-band range with a single source, while its high speed, mode-hop-free sweeping not only reduces testing time, but permits process testing and alignment of components during manufacturing.

As with all MAP cassettes, it may be seamlessly integrated with the extensive family of MAP cassettes, which enables complete custom solutions to be rapidly assembled and expanded as needed.

INVISIBLE LASER RADIATION AVOID EXPOSURE TO BEAM CLASS 3B LASER PRODUCT (IEC 60825-1, 2002) MAX. 500 mw, 700-1680 nm

# MAP Large Channel Count Switch

For stand-alone applications, the MAP Large Channel Count Switch may be used as a benchtop

### **Applications**

- Dense wavelength division multiplexing (DWDM) channel testing
- Amplifier characterization
- Bit error rate (BER) testing
- Signal routing

## **Safety Information**

• This cassette, when installed in a MAP chassis, complies to CE requirements plus UL3101-1 and CAN/CSA-C22.2 No. 1010.1.

Key Features • Low IL < 0.7 dB

- Low polarization dependent loss (PDL) 0.04 dB
- Wide wavelength range
- High RL > 57 dB

The Multiple Application Platform (MAP) Large Channel Count Switch Cassette is bidirectional and allows the connection of a common port to any number of channels up to 50. The cassette is available in single or dual-switch configurations.

The MAP switch cassette is based on JDSU expanded beam and alignment technologies and exhibits low insertion loss (IL) and high return loss (RL).

For stand-alone applications, the MAP Small Channel Count Switch may be used as a benchtop

## Applications

- Dense wavelength division multiplexing (DWDM) channel testing
- Amplifier characterization
- Bit error rate (BER) testing
- Signal routing

## Safety Information

• This cassette, when installed in a MAP chassis, complies to CE requirements plus UL3101-1 and CAN/CSA-C22.2 No. 1010.1.

Key Features

- Low insertion loss (IL) < 0.8 dB
  - Low polarization dependent loss (PDL) 0.08 dB
  - High return loss (RL) > 55 dB
  - Up to 8 switches per cassette

The Multiple Application Platform (MAP) Small Channel Count Switch is a single width cassette that is able to accommodate a number of switches with varying channel counts.

The switch redirects input light by an optical prism or mirror into a selected output channel. The switch is bidirectional, transparent to signal format, available in both single-mode (SM) and multimode (MM) versions.

Special density and functionality cassettes can be made available on a custom order basis.

# **MAP RF Switch**

• 1 x 2 and bypass versions

**Key Features** 

- Mechanically latching
- Built-in 50 Ohm terminations

• Single or independent dual

For stand-alone applications, the MAP RF Switch may be used as a benchtop

## Applications

- Data source selection
- Routing to main analyzer

## Configurations

- Single 1 x 2, dual independent 1 x 2
- · Single bypass, dual independent bypass

## **Safety Information**

• This cassette, when installed in a MAP chassis, complies to CE requirements plus UL3101-1 and CAN/CSA-C22.2 No. 1010.1.

The Multiple Application Platform (MAP) RF switch cassette is a 50 Ohm coaxial switch for routing RF and microwave signals at frequencies up to 26.5 GHz. Comprising of single and dual 1 x 2 and bypass-type switches, these cassettes are an ideal solution for routing 10 Gb signals between power meters, receivers, and spectrum analyzers. The switches are based on mechanical latching actuators with a million-cycle lifetime.

The single and independent dual 1 x 2 configurations units feature dual built-in 50 Ohm terminators for each of the unused ports, allowing efficient use as an A-or-B source selector.

The single and independent dual bypass switches feature a single built-in 50 Ohm termination on one of the 'insert' loop ports which is activated when switch is in the bypass [straight through] state.

Parameter	Specification

For stand-alone applications, the MAP Utility may be used as a benchtop

## **Applications**

- Bit error rate (BER) test
- Passive component test
- Optical amplifier test

## **Safety Information**

• This cassette, when installed in a MAP chassis, complies to CE requirements plus UL3101-1 and CAN/CSA-C22.2 No. 1010.1.

The Multiple Application Platform (MAP) Utility Cassette is designed to simplify the mechanical integration of passive optical components for test sets. It is a highly configurable cassette that contains passive optical devices such as

the mechanical integration of passive optical components for test sets. It is a highly configurable cassette that contains passive optical devices such as 1 x 4 splitters, 1 x 8 splitters and taps. It supports angle or flat polish connectors and single-mode (SM) and multimode (MM) fibers.

A blank cassette is available for mechanical mounting of components such as isolators, circulators or fixed attenuators. The cassettes are supplied with mounting hardware and up to ten bulkhead adapters for ease of integration.

MAP UTILITY

# **About Technical Support**

JDSU provides dedicated post-sales support with a team that is ready to help you answer any questions or concerns about Instrumentation products.

# **Standard Technical Support**

(Included with every instrumentation product purchase) Our technical support specialists are available live, via our global toll-free 800 number or via e-mail (8:00 AM - 5:00 PM ET,Monday through Friday) If you are experiencing a problem with the operation of a product, our Technical Support Specialist is trained to work with you, to carry out technical troubleshooting to resolve or confirm the reported problem. If a problem is confirmed, the Technical Support Specialist will ensure the appropriate action is taken to address your needs.

All service (repair, calibration, upgrade) for our products is provided via the JDSU Technical Support Team.

Replacement user manuals and any software updates are also included in our standard support package.

# 24-7 Emergency Technical Support

24-7 Emergency Technical Support via our global toll-free 800 number is also included in our standard level of support. If you require emergency technical support, a Technical Support Specialist will be paged, and will return your call promptly.

For further information, including Extended Support Options and Technical Training, please contact JDSU.

# **Contact Support**

Regular support hours of operation are 8:00 AM - 5:00 PM ET, Monday through Friday, excluding holidays.

Emergency Technical Support is available 24 hours a day, 7 days a week if your equipment is not functioning and you have an urgent requirement for assistance. Dial one of the telephone numbers and follow the voice prompts to page a specialist.
