TABLE OF CONTENTS

1	PRECAUTION.....	1-3
2	SPECIFIC SERVICE INSTRUCTIONS.....	1-6
3	DISASSEMBLY	1-7
4	ADJUSTMENT	1-28
5	TROUBLESHOOTING	1-32

SPECIFICATION

DVD receiver (CA-UXQD9S)

Amplifier	Output power		20 W + 20 W at 4 Ω (10% THD)
	Input terminals	Analog	AUX $\times$ 1, 500 mV/47 k Ω :LEVEL1 250 mV/47 k Ω :LEVEL2
	Output terminals	Analog	Speaker $\times$ 1, 20 W/4 Ω , Impedance 4 Ω - 16 Ω Headphone ($\times$ 1), 25 mW/32 Ω , Impedance 16 Ω - 1 k Ω
		Digital	DVD/CD optical input $\times$ 1 -23 dBm to -15 dBm (Optical square terminal)
		Other	AV COMPU LINK $\times$ 2 ($\varnothing$ 3.5)
Tuner	Frequency	FM	87.50 MHz - 108.00 MHz
		AM	531 kHz - 1 710 kHz (9 kHz spacing) 530 kHz - 1 710 kHz (10 kHz spacing)
DVD player	Playable discs		DVD VIDEO, DVD AUDIO, CD, VCD, SVCD, CD-R/CDRW (CD, VCD, SVCD, MP3/ WMA/JPEG format), DVD-R/ DVD-RW (video format)
Cassette deck	Frequency response	Normal (type I)	60 Hz - 14 000 Hz
		Wow and flutter	0.15% (WRMS)
General	Power requirement		AC 240 V , 50/60 Hz (UN,US only) AC 240 V , 50 Hz (A only)
	Power consumption		70 W (at operation) 1.3 W (on standby)
	Dimensions		165 mm (W) $\times$ 200 mm (H) $\times$ 355 mm (D)
	Mass (approx.)		4.6 kg

Speaker (SP-UXQD9S)

System		3-way bass reflex type, Magnetically shielded type
Speakers	Woofer	10 cm $\times$ 1
	Midrange	4 cm $\times$ 1
	Tweeter	1.5 cm $\times$ 1
Power handling capacity		20 W
Impedance		4 Ω
Frequency range		55 Hz - 40 kHz
Sound pressure level		85 dB/W $\cdot$ m
Dimensions		140 mm (W) $\times$ 231 mm (H) $\times$ 204.5 mm (D)
Mass (approx.)		2.2 kg (1 unit)

Micro component system (UX-QD9S)

General	Dimensions	445 mm (W) $\times$ 231 mm (H) $\times$ 355 mm (D)
	Mass (approx.)	9.0 kg

- U.S. and foreign patents licensed from Dolby Laboratories.
- Design and specifications are subject to change without notice.

SECTION 1

PRECAUTION

1.1 Safety Precautions

- (1) This design of this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Services should be performed by qualified personnel only.
- (2) Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacturer of responsibility for personal injury or property damage resulting therefrom.
- (3) Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the Parts List of Service Manual. Electrical components having such features are identified by shading on the schematics and by (▲) on the Parts List in the Service Manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement parts shown in the Parts List of Service Manual may create shock, fire, or other hazards.
- (4) The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after reassembling.

(5) Leakage shock hazard testing

After reassembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock. Do not use a line isolation transformer during this check.

- Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current from each exposed metal part of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC (r.m.s.).
- Alternate check method
Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having, 1,000Ω per volt or more sensitivity in the following manner. Connect a 1,500Ω 10W resistor paralleled by a 0.15μF AC-type capacitor between an exposed metal part and a known good earth ground. Measure the AC voltage across the resistor with the AC

voltmeter.

Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. Voltage measured any must not exceed 0.75 V AC (r.m.s.). This corresponds to 0.5 mA AC (r.m.s.).

1.2 Warning

- (1) This equipment has been designed and manufactured to meet international safety standards.
- (2) It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
- (3) Repairs must be made in accordance with the relevant safety standards.
- (4) It is essential that safety critical components are replaced by approved parts.
- (5) If mains voltage selector is provided, check setting for local voltage.

1.3 Caution

Burrs formed during molding may be left over on some parts of the chassis.

Therefore, pay attention to such burrs in the case of pre-forming repair of this system.

1.4 Critical parts for safety

In regard with component parts appearing on the silk-screen printed side (parts side) of the PWB diagrams, the parts that are printed over with black such as the resistor (■), diode (▲) and ICP (●) or identified by the "▲" mark nearby are critical for safety. When replacing them, be sure to use the parts of the same type and rating as specified by the manufacturer.

(This regulation does not Except the J and C version)

1.5 Preventing static electricity

Electrostatic discharge (ESD), which occurs when static electricity stored in the body, fabric, etc. is discharged, can destroy the laser diode in the traverse unit (optical pickup). Take care to prevent this when performing repairs.

1.5.1 Grounding to prevent damage by static electricity

Static electricity in the work area can destroy the optical pickup (laser diode) in devices such as laser products. Be careful to use proper grounding in the area where repairs are being performed.

(1) Ground the workbench

Ground the workbench by laying conductive material (such as a conductive sheet) or an iron plate over it before placing the traverse unit (optical pickup) on it.

(2) Ground yourself

Use an anti-static wrist strap to release any static electricity built up in your body.

(3) Handling the optical pickup

- In order to maintain quality during transport and before installation, both sides of the laser diode on the replacement optical pickup are shorted. After replacement, return the shorted parts to their original condition. (Refer to the text.)
- Do not use a tester to check the condition of the laser diode in the optical pickup. The tester's internal power source can easily destroy the laser diode.

1.6 Handling the traverse unit (optical pickup)

- (1) Do not subject the traverse unit (optical pickup) to strong shocks, as it is a sensitive, complex unit.
- (2) Cut off the shorted part of the flexible cable using nippers, etc. after replacing the optical pickup. For specific details, refer to the replacement procedure in the text. Remove the anti-static pin when replacing the traverse unit. Be careful not to take too long a time when attaching it to the connector.
- (3) Handle the flexible cable carefully as it may break when subjected to strong force.
- (4) It is not possible to adjust the semi-fixed resistor that adjusts the laser power. Do not turn it.

1.7 Attention when traverse unit is decomposed

***Please refer to "Disassembly method" in the text for the pickup unit.**

- Apply solder to the short land sections before the flexible wire is disconnected from the connector on the servo board. (If the flexible wire is disconnected without applying solder, the pickup may be destroyed by static electricity.)
- In the assembly, be sure to remove solder from the short land sections after connecting the flexible wire.

1.8 Important for laser products

1.CLASS 1 LASER PRODUCT

2.DANGER : Invisible laser radiation when open and interlock failed or defeated. Avoid direct exposure to beam.

3.CAUTION : There are no serviceable parts inside the Laser Unit. Do not disassemble the Laser Unit. Replace the complete Laser Unit if it malfunctions.

4.CAUTION : The CD,MD and DVD player uses invisible laser radiation and is equipped with safety switches which prevent emission of radiation when the drawer is open and the safety interlocks have failed or are defeated. It is dangerous to defeat the safety switches.

5.CAUTION : If safety switches malfunction, the laser is able to function.

6.CAUTION : Use of controls, adjustments or performance of procedures other than those specified here in may result in hazardous radiation exposure.

CAUTION Please use enough caution not to see the beam directly or touch it in case of an adjustment or operation check.

CAUTION : Visible and invisible laser radiation when open and interlock failed or defeated.

AVOID DIRECT EXPOSURE TO BEAM.

ADVARSEL : Synlig og usynlig laserstråling når maskinen er åben eller interlocken fejler. Undgå direkte eksponering til stråling.

VARNING : Synlig och osynlig laserstråling när den öppnas och spärren är urkopplad. Betrakta ej strålen.

VARO : Avattaessa ja suojalukitus ohitettuna tai viallisena olet alttiina näkyvälle ja näkymättömälle lasersäteilylle. Vältä säteen kohdistumista suoraan itseesi.

SECTION 2

SPECIFIC SERVICE INSTRUCTIONS

This service manual does not describe SPECIFIC SERVICE INSTRUCTIONS.

SECTION 3 DISASSEMBLY

3.1 Main body section

3.1.1 Removing the rear cover

(See Figs.1 and 2)

- (1) From the back side of the main body, remove the eleven screws **A** attaching the rear cover. (See Fig.1.)
- (2) From the bottom side of the main body, remove the three screws **B** attaching the rear cover. (See Fig.2.)
- (3) Remove the rear cover from the main body.

Fig.1

Fig.2

3.1.2 Removing the side panels (L)/(R) (See Fig.3)

- Remove the rear cover.
 - From the bottom side of the main body, remove the two screws **C** attaching the side panels (L)/(R).
 - Slide the side panels (L)/(R) in the direction of the arrow and remove the side panels (L)/(R).

Fig.3

3.1.3 Removing the top cover assembly (See Figs.4 and 5)

- Remove the rear cover and side panels(L)/(R).
 - From the left side of the main body, disconnect the card wires from the connectors ([CN703](#), [CN709](#)) on the micon board. (See Fig.4.)
 - Remove the screw **D** attaching the top cover assembly. (See Fig.4.)
 - From the right side of the main body, disconnect the card wire from the connector [CN105](#) on the main board. (See Fig.5.)
 - Disconnect the wire from the connector [CN108](#) on the main board. (See Fig.5.)

Reference:

When connecting the wire, pass it through the slot **b** of the main board as before. (See Fig.5.)

- From the both sides of the main body, remove the two screws **E** and screw **F** attaching the top cover assembly. (See Figs.4 and 5.)
- Release the joints **a** and remove the top cover assembly. (See Figs.4 and 5.)

Fig.4

Fig.5

3.1.4 Removing the front panel assembly (See Figs.6 to 8)

- Remove the rear cover, side panels(L)/(R) and top cover assembly.
 - (1) From the left side of the main body, disconnect the card wires from the connectors (CN702, CN710) on the micon board. (See Fig.6.)
 - (2) From the right side of the main body, disconnect the earth wire from the micon board. (See Fig.7.)
 - (3) From the both sides and bottom sides of the main body, release the joints **c** and joint **d**. (See Figs.6 to 8.)
 - (4) Remove the front panel assembly in the direction of the arrow. (See Figs.6 to 8.)

Fig.6

Fig.7

Fig.8

3.1.5 Removing the fan motor (See Figs.9 and 10)

- Remove the rear cover, side panels(L)/(R) and top cover assembly.
 - From the back side of the top cover assembly, remove the screw **G** attaching the fan motor. (See Fig.9.)

Reference:

When attaching the screw **G**, attach the spacer with it. (See Fig.9.)

- Take out the fan motor.

Reference:

When attaching the fan motor, pass the wire through the slot **e**. (See Fig.10.)

3.1.6 Removing the tuner (See Figs.9 and 10)

- Remove the rear cover, side panels(L)/(R) and top cover assembly.
 - From the back side of the top cover assembly, remove the two screws **H** attaching the tuner bracket. (See Fig.9.)
 - From the inside of the top cover assembly, remove the screw **J** attaching the tuner bracket. (See Fig.10.)
 - Take out the tuner with the tuner bracket.
 - Remove the tuner from the tuner bracket.

3.1.7 Removing the cassette mechanism assembly (See Fig.10)

- Remove the rear cover, side panels(L)/(R) and top cover assembly.
 - From the inside of the top cover assembly, remove the screw **K**, screw **L**, screws **L'** and screw **L''** attaching the cassette mechanism assembly.
 - Loosen the screw **M** attaching the cassette mechanism assembly.
 - Remove the cassette mechanism assembly.

Reference:

- When attaching the screw **L'**, attach the lug wire and shield with it.
- When attaching the screw **L''**, attach the shield with it.

Fig.9

Fig.10

3.1.8 Removing the heat sink (See Fig.11)

- Remove the rear cover, side panels(L)/(R) and top cover assembly.
 - (1) From the back side of the main body, remove the eight screws **N** attaching the heat sink.
 - (2) Remove the heat sink from the main board and regulator board.

Fig.11

3.1.9 Removing the main board (See Fig.12)

- Remove the rear cover, side panels(L)/(R), top cover assembly and heat sink.
 - (1) From the right side of the main body, remove the two screws **P** attaching the main board. (See Fig.12.)
 - (2) Disconnect the connectors ([CN101](#) to [CN104](#), [CN106](#) and [CN110](#)) on the main board toward this side. (See Fig.12.)
 - (3) From the forward side of the main board, disconnect the wires from the connectors ([CN109](#) and [CN111](#)). (See Fig.12.)

Reference:

Remove it when a lug wire from the main board is installed with a screw **Q**.
(When the screw **Q** and lug wire are installed, apply it.) (See Fig.13.)

Fig.12

Fig.13

3.1.10 Removing the regulator board (See Fig.14)

- Remove the rear cover, side panels(L)/(R), top cover assembly, heat sink and main board.
 - From the top side of the main body, disconnect the wire from the connector [CN902](#) on the transformer board.
 - Disconnect the wire from the connector [CN202](#) on the regulator board.
 - Remove the three screws **R** attaching the regulator board.
 - Take out the regulator board from the main body.

Reference:

After attaching the regulator board, attach the barrier (C) as before.

Fig.14

3.1.11 Removing the transformer board (See Fig.15)

- Remove the rear cover, side panels(L)/(R), top cover assembly, heat sink, main board and regulator board.
 - From the back side of the main body, remove the two screws **S** attaching the heat sink bracket.
 - From the left side of the main body, remove the tie band.

Reference:

After attaching the transformer board, fix the power cord with the new tie band as before.

- Disconnect the wire from the connector [CN903](#) on the transformer board.
- Disconnect the power cord from the connector [CN901](#) on the transformer board.
- Remove the three screws **T** attaching the power transformer and take out the transformer board from the main body.

Reference:

Remove the transformer shield as required.

Fig.15

3.1.12 Removing the power transformer (See Fig.16)

- Remove the rear cover, side panels(L)/(R), top cover assembly, heat sink, main board, regulator board and transformer board.
- (1) From the reverse side of the transformer board, remove the solders from the sections **f** on the transformer board.
- (2) Remove the power transformer from the transformer board.

Fig.16

3.1.13 Removing the jack board and component board (See Fig.17)

- Remove the rear cover, side panels(L)/(R), top cover assembly, heat sink, main board and regulator board.
- (1) From the back side of the main body, remove the two screws **U** attaching the heat sink bracket.
- (2) From the top side of the main body, remove the screw **V** attaching the PWB holder and take out the PWB holder.

Reference:

When attaching the PWB holder, put the section **g** under the hook of the bottom chassis.

- (3) Remove the screw **W** attaching the jack board and take out the jack board with the component board.

Reference:

- Remove the connector [CN631](#) on the component board from the jack board as required.
- When attaching the jack board, attach it after putting a projection **h** of the bottom chassis in a hole of the jack board.

Fig.17

3.1.14 Removing the joint board

(See Fig.18)

- Remove the rear cover, side panels(L)/(R), top cover assembly, heat sink, main board, regulator board and transformer board.

Reference:

Remove the jack board as required.

- From the back side of the main body, remove the two screws **X** attaching the joint board.
- Remove the connector **CN805** on the joint board from the micon board toward this side.
- From the forward side of the joint board, disconnect the card wires from the connectors (**CN801** and **CN802**) on the joint board.
- Take out the joint board from the main body.

Fig.18

3.1.15 Removing the micon board

(See Fig.19)

- Remove the rear cover, side panels(L)/(R), top cover assembly, front panel assembly, heat sink, main board and regulator board.

- Remove the two screws **Y** attaching the MD holder to the micon board. (See Fig.19.)
- Take out the MD holder.
- Disconnect the wire from the connector **CN903** on the transformer board. (See Fig.20.)
- Disconnect the card wires from the connectors (**CN705** and **CN711**) on the micon board. (See Fig.20.)
- Remove the screw **Z** attaching the micon board. (See Fig.20.)
- Disconnect the micon board from the connector **CN805** on the joint board. (See Fig.20.)
- Take out the micon board from the main body.

Fig.19

Fig.20

3.1.16 Removing the DVD mechanism assembly (See Figs.21 and 22)

- Remove the rear cover, side panels(L)/(R), top cover assembly, heat sink, main board, regulator board, transformer board and joint board.

- (1) From the top side of the main body, disconnect the card wires from the connectors (CN705 and CN711) on the micon board. (See Fig.21.)
- (2) From the left side of the main body, remove the spacers fixing the card wires. (See Fig.21.)
- (3) From the top side of the main body, remove the two screws **AA** attaching the DVD mechanism bracket. (See Fig.21.)
- (4) Move the DVD mechanism bracket in the direction of the arrow to release the claws **i** and remove the DVD mechanism bracket. (See Fig.21.)
- (5) Remove the screw **AB** attaching the DVD mechanism assembly. (See Fig.22.)
- (6) Take out the DVD mechanism assembly from the main body. (See Fig.22.)

Fig.21

Fig.22

3.1.17 Removing the headphone board (See Fig.23)

- Remove the rear cover, side panels(L)/(R), top cover assembly, heat sink, main board, regulator board, transformer board, joint board and DVD mechanism assembly.
- (1) From the right side of the main body, remove the screw **AC** attaching the headphone board.
- (2) Take out the headphone board from the main body.

Reference:

- When attaching the headphone board, put the headphone board in the slot **j**.
- When attaching the headphone board, pass the wire through the section **k**.
- After attaching the headphone board, fix the wires with the spacers as before.

Fig.23

3.1.18 Removing the FL board (See Fig.24)

- Remove the rear cover, side panels(L)/(R), top cover assembly and front panel assembly.
- (1) From the inside of the front panel assembly, remove the three screws **AD** attaching the FL board.
- (2) Take out the FL board from the front panel assembly.

Note:

When attaching the FL board, be careful not to damage the LCD panel.

3.1.19 Removing the key board (See Figs.24 and 25)

- Remove the rear cover, side panels(L)/(R), top cover assembly and front panel assembly.
- (1) From the front side of the front panel assembly, pull out the volume knob in the direction of the arrow. (See Fig.25.)
- (2) From the inside of the front panel assembly, remove the six screws **AE** attaching the key board. (See Fig.24.)
- (3) Take out the key board from the front panel assembly.

Fig.24

Fig.25

3.2 DVD mechanism assembly section

- Remove the DVD mechanism assembly from the main body.
(See "3.1.16 Removing the DVD mechanism assembly".)

3.2.1 Removing the DVD cover (See Fig.1)

- From the top side of the DVD mechanism assembly, remove the two screws **A** attaching the DVD cover.
- Remove the double-stick tape fixing the card wire.
- Lift the DVD cover in an upward direction and remove it from the projections **a** of the DVD mechanism assembly.
- Slide the DVD cover in the direction of the arrow and remove it from the sections **b**.
- Release the lock of the connector **CN4** on the LED board and disconnect the card wire.

3.2.2 Removing the joint board (See Fig.2)

- Remove the DVD cover.
- From the inside of the DVD cover, remove the screw **B** attaching the joint board.
- Remove the spacer attaching the joint board and take out the joint board from the DVD cover.

3.2.3 Removing the tray assembly (See Figs.3 and 4)

- Remove the DVD cover.
 - (1) From the right side of the DVD mechanism assembly, push the slide cam and pull the tray assembly out of the DVD mechanism assembly in the direction of the arrow. (See Fig.3.)
 - (2) From the top side of the DVD mechanism assembly, remove the two screws **C** attaching the tray assembly. (See Fig.4.)
 - (3) Remove the bushing of the tray assembly from the projections **c** on the DVD mechanism assembly and take out the tray assembly in an upward direction. (See Fig.4.)

Fig.3

Fig.4

3.2.4 Removing the LED board (See Fig.5)

- Remove the DVD cover and tray assembly.
 - (1) From the top side of the tray assembly, remove the sections **d** which were fixed in bond.
 - (2) Remove the double-stick tape attaching the LED board and take out the LED board.

Note:

When removing the LED board, be sure not to damage the LED board.

Fig.5

3.2.5 Removing the traverse mechanism assembly (See Figs.6)

- Remove the DVD cover.
 - (1) From the bottom side of the DVD mechanism assembly, remove the four screws **D** attaching the traverse mechanism assembly.
 - (2) Take out the traverse mechanism assembly with the DVD module board.

Fig.6

3.2.6 Removing the DVD module board (See Figs.7 and 8)

- Remove the DVD cover and traverse mechanism assembly.
 - (1) From the side of the traverse mechanism assembly, solder the short land sections **e** of the pickup. (See Fig.7.)
 - (2) From the bottom side of the traverse mechanism assembly, release the lock of the connector **CN101** on the DVD module board in the direction of the arrow and disconnect the card wire. (See Fig.8.)

Caution:

- Solder the short land section **e** on the pickup before disconnecting the card wire from the connector **CN101** on the DVD module board. If the card wire is disconnected without attaching solder, the pickup may be destroyed by static electricity. (See Figs.7 and 8.)
 - When attaching the DVD module board, be sure to remove solders from the short land section **e** after connecting the card wire to the connector **CN101** on the DVD module board. (See Figs.7 and 8.)
- (3) Disconnect the card wire from the connector **CN201** on the DVD module board. (See Fig.8.)
 - (4) Remove the two screws **E** attaching the DVD module board. (See Fig.8.)
 - (5) Remove the DVD module board from the projection **f** in an upward direction and remove the claw **h** in the direction of the arrow 2 while removing the claw **g** in the direction of the arrow 1. (See Fig.8.)

Fig.7

Fig.8

3.2.7 Removing the pickup (See Figs.7, 9 to 11)

- Remove the DVD cover and traverse mechanism assembly.
 - (1) From the side of the traverse mechanism assembly, solder the short land sections **e** of the pickup. (See Fig.7.)
 - (2) Release the lock of the connector of the pickup in the direction of the arrow and disconnect the card wire. (See Fig.9.)

Caution:

- Solder the short land section **e** on the pickup before disconnecting the card wire from the connector on the pickup. If the card wire is disconnected without attaching solder, the pickup may be destroyed by static electricity. (See Figs.7 and 9.)
 - When attaching the pickup, be sure to remove solders from the short land section **e** after connecting the card wire to the connector on the pickup. (See Figs.7 and 9.)
- (3) Remove the screw **F** attaching the plate and thrust spring. (See Fig.9.)
 - (4) Remove the plate from the joint **i** of the feed holder and take out the plate with the thrust spring. (See Fig.9.)
 - (5) Remove the shaft of the pickup from the section **j** of the traverse mechanism assembly and remove it from the section **k** while moving the shaft in the direction of the arrow. (See Fig.10.)
 - (6) Remove the pickup from the section **m** of the traverse mechanism assembly and take out the pickup with the shaft. (See Fig.10.)
 - (7) From the bottom side of the pickup, remove the two screws **G** attaching the SW actuator and LEAD spring. (See Fig.11.)
 - (8) Pull the shaft out of the pickup. (See Fig.11.)

3.2.8 Attaching the pickup (See Figs.7, 9 to 12)

- See "3.2.7 Removing the pickup".
 - (1) Attach the shaft, SW actuator and LEAD spring to the pickup. (See Fig.11.)
 - (2) Align the pickup to the section **m** of the traverse mechanism assembly first, and set the both ends of the shaft of the pickup in the sections (**j**, **k**) of the traverse mechanism assembly. (See Fig.10.)
 - (3) Attach the plate and thrust spring. (See Fig.9.)
 - (4) Remove the solders from the soldered sections **e** after attaching the card wire to the connector on the pickup. (See Figs.7 and 9.)
 - (5) Turn the feed gear M in the direction of the arrow 1 to move the pickup fully in the direction of the arrow 2. (See Fig.12.)

Fig.12

3.2.9 Removing the feed motor (See Figs.13 to 15)

- Remove the DVD cover and traverse mechanism assembly.
 - (1) From the top side of the traverse mechanism assembly, remove the screw **H** attaching the plate and thrust spring. (See Fig.13.)
 - (2) Remove the plate from the joint **n** of the feed holder and take out the plate with the thrust spring. (See Fig.13.)
 - (3) Remove the wires from the soldered sections **p** on the spindle motor board. (See Fig.14.)

Reference:

When attaching the feed motor, pass the wires through the section **q** on the spindle base. (See Fig.14.)

- (4) Remove the three screws **J** attaching the feed holder. (See Fig.14.)
- (5) Remove the feed holder, feed motor, lead screw, feed gear E and feed gear M simultaneously. (See Fig.14.)
- (6) From the side of the feed holder, remove the two screws **K** attaching the feed motor. (See Fig.15.)

Fig.13

3.2.10 Removing the spindle motor board (See Fig.14 and 16)

- Remove the DVD cover, traverse mechanism assembly and DVD module board.
 - (1) From the top side of the traverse mechanism assembly, remove the wires from the soldered sections **p** on the spindle motor board. (See Fig.14.)
 - (2) From the bottom side of the traverse mechanism assembly, remove the three screws **L** attaching the spindle motor board. (See Fig.16.)

Fig.14

Fig.15

Fig.16

3.2.11 Removing the DVD loading switch board (See Fig.17)

- (1) From the bottom side of the DVD mechanism assembly, remove the screw **M** attaching the DVD loading switch board.
- (2) Remove the wires from the soldered sections **r** on the DVD loading switch board.
- (3) Lift the DVD loading switch board while pressing the claw **s** of the DVD mechanism assembly in the direction of the arrow and remove the DVD loading switch board from the section **t**.
- (4) From the forward side of the DVD loading switch board, disconnect the card wire from the connector **CN1**.

Reference:

- Put the wires on the section **u** after attaching the DVD loading switch board to the DVD mechanism assembly.
- Fix the claw **t** on the DVD mechanism assembly with bonds after attaching the DVD loading switch board.

Fig.17

3.2.12 Removing the motor (See Figs.17 and 18)

- Remove the DVD cover and tray assembly.
- (1) From the bottom side of the DVD mechanism assembly, remove the wires from the soldered sections **r** on the DVD loading switch board. (See Fig.17.)
- (2) From the top side of the DVD mechanism assembly, remove the belt from the motor pulley. (See Fig.18.)

Note:

Take care not to attach grease on the belt.

- (3) Remove the two screws **N** attaching the motor to the DVD mechanism assembly and take out the motor from the bottom side of the DVD mechanism assembly. (See Fig.18.)

Fig.18

3.3 Cassette mechanism assembly

3.3.1 Removing the Play/Record & Clear head (See Fig.1~3)

- (1) While moving the trigger arm on the right side of the head mount in the direction of the arrow, turn the flywheel R counterclockwise until the head mount comes ahead and clicks.
- (2) The head turns counterclockwise as you turn the flywheel R counterclockwise (See Fig.2 and 3).
- (3) Disconnect the flexible wire from connector [CN31](#) on the head amplifier & mechanism control board.
- (4) Remove the spring from the back of the head.
- (5) Loosen the azimuth screw for reversing attaching the head.
- (6) Remove the head on the front side of the head mount.

Fig.1

Fig.2

Fig.3

3.3.2 Removing the head amplifier & mechanism control board (See Fig.4)

- (1) Turn over the cassette mechanism assembly and remove the three screws **A** attaching the head amplifier & mechanism control board.
- (2) Disconnect the flexible wire from connector **CN31** on the head amplifier & mechanism control board.
- (3) Disconnect connector **CN32** of the head amplifier & mechanism control board from connector **CN1** on the reel pulse board. REFERENCE: If necessary, unsolder the 4-pin wire soldered to the main motor.

3.3.3 Removing the main motor (See Fig.4~7)

- (1) Remove the two screws **B**.
- (2) Half raise the motor and remove the capstan belt from the motor pulley.

ATTENTION:

Be careful to keep the capstan belt from grease. When reassembling, refer to Fig.6 and 7 for attaching the capstan belt.

Fig.4

Fig.5

Fig.6

Fig.7

3.3.4 Removing the flywheel (See Fig.8, 9)

- Prior to performing the following procedure, remove the head amplifier & mechanism control board and the main motor assembly.
- (1) From the front side of the cassette mechanism, remove the slit washers attaching the capstan shaft **L** and **R**. Pull out the flywheels backward.

3.3.5 Removing the reel pulse board and solenoid (See Fig.10)

- Prior to performing the following procedure, remove the head amplifier & mechanism control board.
- (1) Remove the screw **C**.
- (2) Release the tab **a**, **b**, **c**, **d** and **e** retaining the reel pulse board.
- (3) Release the tab **f** and **g** attaching the solenoid on the reel pulse board.
- (4) The reel pulse board and the solenoid come off.

Fig.10

3.3.6 Reattaching the Play/ Record & Clear head (See Fig.11~13)

- (1) Reattaching the head mount assembly.
 - a) Change front of the direction cover of the head mount assembly to the left (Turn the head forward).
 - b) Fit the bosses **O'**, **P'**, **Q'**, **U'** and **V'** on the head mount assembly to the holes **P** and **V**, the slots **O**, **U** and **Q** of the mechanism sub assembly (See Fig.11 to 13).

CAUTION:

To remove the head mount assembly, turn the direction cover to the left to disengage the gear. If the gear can not be disengaged easily, push up the boss **Q'** slightly and raise the rear side of the head mounts slightly to return the direction lever to the reversing side.

- (2) Tighten the azimuth screw for reversing.
- (3) Reattach the spring from the back of the Play/ Record & Clear head.
- (4) Connect the flexible wire to connector **CN31** on the head amplifier & mechanism control board.

Fig.11

Fig.12

Fig.13

SECTION 4 ADJUSTMENT

4.1 Adjustment method for DVD section

4.1.1 Jigs and test instruments

- (1) Upgrade disc
- (2) Remote controller

4.1.3 Adjustment and check method

1. EEPROM initialization

* Confirm that a disc is not in a tray.

4.1.2 Adjustment and check items

- (1) EEPROM initialization
- (2) Upgrade of back-end firm
- (3) Upgrade of system microcomputer (ROM correction)
- (4) Confirm of region code and system control version
- (5) DVD IOP check

2. Upgrade of back-end firm

- * This set can do upgrade of a back-end firm with an upgrade disc.

3. Upgrade of system microcomputer (ROM correction)

- * This set can do upgrade of a microcomputer with a ROM correction disc.

4. Confirmation of region code and system control version

- (1) Insert the AC power cord in an outlet while pressing both the [STOP] key and [DVD PLAY] key on the main unit and put the main unit in a test mode.
- (2) Indication of LCD changes sequentially as follows by pushing a [MENU] key of a remote controller.

- (3) Version indication of a DVD unit is displayed by pressing the [ON SCREEN] key on the remote controller in the system controller version indication

- (3) Press the [POWER] key of the main unit in order to let the test mode finish.

5. DVD IOP check

* Confirm that a disc is not in a tray.

- (1) Insert the AC power cord in an outlet while pressing both the [STOP] key and [DVD PLAY] key on the main unit and put the main unit in a test mode.
- (2) Turn indication of LCD into CHECK by pushing a [MENU] key of a remote controller.

SECTION 5

TROUBLESHOOTING

This service manual does not describe TROUBLESHOOTING.

Block diagram	2-1
Standard schematic diagrams	2-2
Printed circuit boards	2-10 to 13

In regard with component parts appearing on the silk-screen printed side (parts side) of the PWB diagrams, the parts that are printed over with black such as the resistor (■), diode (⬤) and ICP (●) or identified by the "△" mark nearby are critical for safety.
