### **APPLICATION NOTE**

#### **Silicon RF Power Semiconductors**

Document NO. AN-GEN-030-E
Date : 16<sup>th</sup> Jun. 2003
Rev. date : 22<sup>th</sup>.Jun. 2010
Prepared : T.Kajo,T.Okawa

Confirmed: H.Nakao

(Taking charge of Silicon RF by

MIYOSHI Electronics)

#### **SUBJECT:** Reliability concept for Silicon RF Products

Conclusion: This application note shows the reliability concept and reliability level for Silicon RF products. We show the target quality level of Silicon RF products at Item 1. Next we show the our estimate operating time of walkie-talkie at Item2. Item 3 shows the our standard item of reliability test. For reference, we show the conceivable failure mode at Item4.

#### 1.Quality level

Application; Consumer use two way walkie-talkie for mobile.

Initial Failure Rate; 1000ppm Failure in Time; 1000FIT

2. Estimate of walkie-talkie operating time

Transmit: Receive: Wait Time= 1: 4: 5 minute/Cycle

Operating time 8.5houres/day

Life Time 5Years (93.075Cycle/Life)

3. Reliability test item and condition

Page 2-4 shows the reliability report of module.

We examine the reliability with these item and condition as standard.

4. Conceivable Failure Mode

Page 5 shows the conceivable failure mode.

## 信頼性資料 RELIABILITY REPORT

三菱半導体デバイス MITSUBISHI SEMICONDUCTOR DEVICE

形名: RoHS 規制適合品 RAシリース・

TYPE: RoHS Compliance RA series

### Reliability concept for MITSUBISHI ELECTRIC Silicon RF Power Semiconductors AN-GEN030 -E

RoHS 規制適合品RAシリーズ信頼性結果 RoHS Compliance RA series reliability results

以下の表に RoHS 規制適合品 R A シリーズ (RA45H4452M, RA13H8891MB, RA07M1317M) にて実施した信頼性試験 結果を示します。

The following summarizes reliability test on RoHS Compliance RA series (RA45H4452M, RA13H8891MB, RA07M1317M)

表 1 結果

Table 1 Results

グルーフ <sup>°</sup>	サンフ゜ル	試験項目	試験条件	試験数量	故障数
Group	Sample	Test item	Test condition	QTY Of	QTY Of
				sample	failure
	RA45H4452M	高温保存			
1		High temperature	125°C 1000hours	1 4	0
		Storage			
	RA45H4452M	低温保存			
2		Low temperature	-40°C 1000hours	1 4	0
		Storage			
	RA45H4452M	耐湿性保存			
3		Humidity Storage	85°C / 85%RH 1000hours	1 4	0
	RA45H4452M	温度サイクル		2 2	
4	RA13H8891MB	Temperature	-40°C∕125°C 210cycles	2 2	0
	RA07M1317M	cycling		2 2	
	RA45H4452M	RF 通電試験	f=520MHz Pin=50mW Po=46W(Vgg		
5		RF operation	adj.) Vdd=12.5V	1 6	0
			ON/OFF=2min/2min(△ T c=60°C)		
			8400cycles

### 表 2 故障判定基準

Table 2 Failure criteria

グルーフ°	試験項目	故障判定基準		
Group	Test	Failure criteria		
	高温保存			
1	High temperature	For Po and nT , More than the following amount		
	Storage			
	低温保存	△Po=±20%		
2	Low temperature	△nT=±20%		
	Storage			
	耐湿性保存	RA45H4452M @ ferq=440,520MHz Pin=50mW Vgg=5V Vdd=12.5V		
3	Humidity Storage			
		RA13H8891MB @ ferq=880,915MHz Pin=1mW Vgg=5V Vdd=12.5V		
	温度サイクル			
4	Temperature	RAO7M1317M @ ferq=135,175MHz Pin=20mW Vgg=3.5V Vdd=7.2V		
	cycling			
	RF通電	For Po and nT , More than the following amount		
5	RF operation	$Po=\pm 20\%$ $\triangle nT=\pm 20\%$		
		@ ferq=520MHz Pin=50mW Vdd=12.5V Vgg=Initial Value		

# Reliability concept for MITSUBISHI ELECTRIC Silicon RF Power Semiconductors AN-GEN030 -E

### SiRF Products conceivable failure mode and test method.

Mode	Detail	Formation Process	Principal Cause	Test Method
Substrate Crack (Only Module).	Line break on the substrate.	#Wrong assembly procedure. #Forign object between module flange and chassis. #Expansion by thermal stress.	Excess stress to substrate.	Temperature Cycling
SMD Parts/Solder Crack (Only Module).	Line break on the substrate.	#Poor soldering #High Frequent on/off switching	Excess stress to solder/ SMD parts.	Temperature Cycling
Terminal pull off (Only Module).	Line break on the substrate.	#Poor soldering #High Frequent on/off switching	Excess stress to solder.	Temperature Cycling
Gate leak	Gate oxide burn out.	#Large RF input power #Load VSWR mismatch #Excess DC or RF voltage applied between drain and source.	Excess input power Excess reflection power Static electricity or surge. Misbiasing	- - ESD
Drain to Source Breakdown	Termination between drain and source or drain and gate.	# Laod VSWR mismatch #Excess DC or RF voltage applied between drain and source.	Excess reflection power Static electricity or surge. Misbiasing	- ESD -
Degradation of ohmic feature.	Migration of electrode.	#High current. #Exposed in higher ambient or heat concentration.	Excess high current Inadequate thermal dissipation.	RF continuation transmission test
Wire snapping	Open between chip and substrate.	#High frequent on/off switching	Excess stress to wire by expansion and reduction of coating resin.	Temperature Cycling
