ETR0346-006a

## C<sub>L</sub> Capacitor-Less 500mA Low Power Consumption High Speed LDO Regulator

### ■ GENERAL DESCRIPTION

The XC6503 series is a 500mA high speed CMOS LDO regulator that can provide stable output voltages even without a load capacitor C<sub>L</sub>. The devices are available in fixed output voltage from 1.2V to 5.0V in 0.05V increments.

The C<sub>L</sub> capacitor-less is possible because phase compensation is carried out internally unlike other LDOs where it is done externally. It results in saving board design space. The current limit fold-back circuit and thermal shutdown circuit work as protection circuit. The XC6503P is a 3-Terminal regulator and the XC6503D has a chip enable function, which enables the entire circuit to be turned off by a low level input signal to the CE pin.

When a C<sub>L</sub> capacitor is used, the IC can discharge the electric charge stored at the output capacitor through the internal switch while in standby state, and as a result the V<sub>OUT</sub> quickly returns to the V<sub>SS</sub> level.

### ■ APPLICATIONS

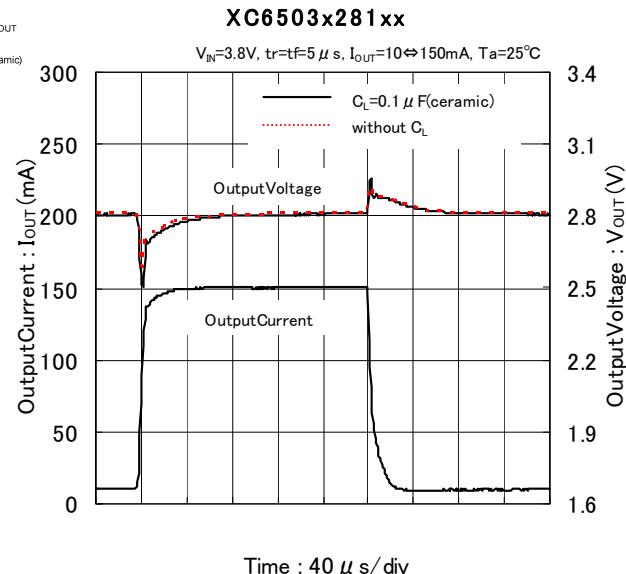

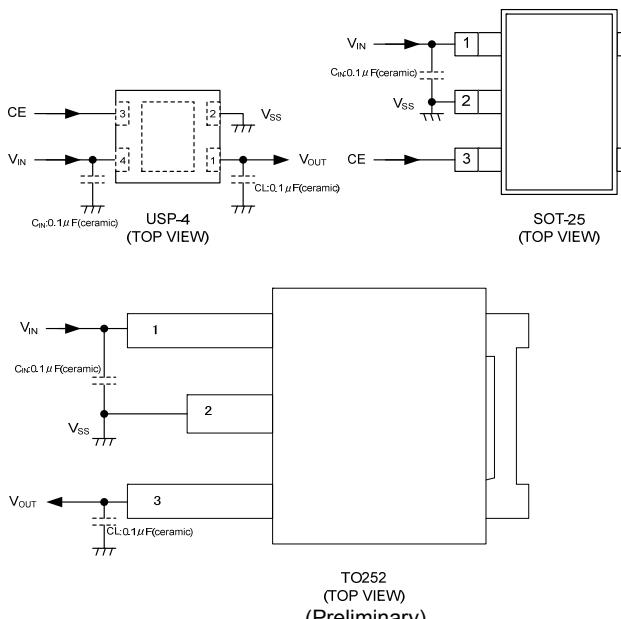

- Mobile phones
- Portable game consoles
- Digital still camera modules
- Wireless LAN modules
- Liquid crystal display modules
- Bluetooth modules
- Digital TV tuner modules

### ■ FEATURES

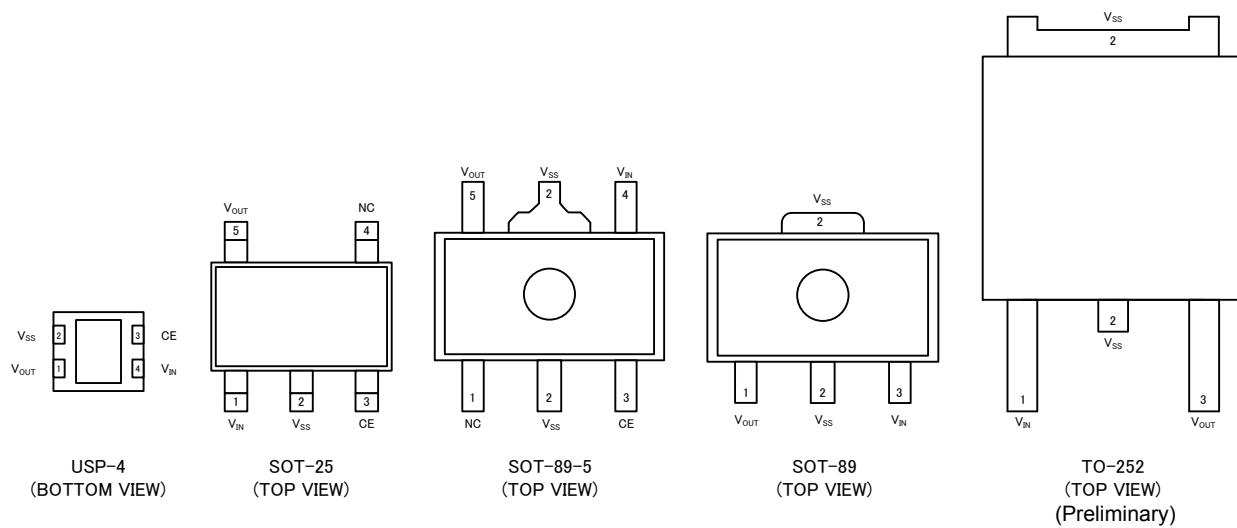

Maximum Output Current	: 500mA
Input Voltage Range	: 1.7V ~ 6.0V
Output Voltage Range	: 1.2V ~ 5.0V (0.05V increments)
Output Accuracy	: ±1.0% (2.0V~5.0V) ±20mV (1.2V~1.95V)
Temperature Stability	: ±30ppm/°C
Dropout Voltage	: 190mV@V <sub>OUT</sub> =2.8V, I <sub>OUT</sub> =300mA
Low Power Consumption	: 15 μA (TYP.), 0.1 μA (in standby)
High PSRR	: 55dB@1kHz, V <sub>OUT</sub> =2.8V
Protection Current	: Current Limiter (630mA TYP.) Short-circuit Protection Thermal Shutdown
C <sub>L</sub> Capacitor-Less	: Internal Phase Compensation
Operating Ambient Temperature	: -40°C~+85°C
Packages	: USP-4, SOT-25, SOT-89-5 (XC6503D) SOT-89, TO-252 (Preliminary) (XC6503P)
Environmentally Friendly	: EU RoHS Compliant, Pb Free

### ■ TYPICAL APPLICATION CIRCUIT

### ■ TYPICAL PERFORMANCE CHARACTERISTICS

## ■ PIN CONFIGURATION

\*The dissipation pad for the USP-4 package should be solder-plated in reference mount pattern and metal masking so as to enhance mounting strength and heat release. If the pad needs to be connected to other pins, it should be connected to the V<sub>SS</sub> (No. 2) pin.

## ■ PIN ASSIGNMENT

PIN NUMBER					PIN NAME	FUNCTIONS
USP-4	SOT-25	SOT89-5	SOT-89	TO-252 (Preliminary)		
4	1	4	3	1	V <sub>IN</sub>	Power Input
1	5	5	1	3	V <sub>OUT</sub>	Output
2	2	2	2	2	V <sub>SS</sub>	Ground
3	3	3	-	-	CE	ON/OFF Control
-	4	1	-	-	NC	No Connection

## ■ PRODUCT CLASSIFICATION

- Ordering Information XC6503D with ON/OFF function

XC6503①②③④⑤⑥-⑦<sup>(\*)1)</sup>

DESIGNATOR	ITEM	SYMBOL	DESCRIPTION
①	Type of Regulator <sup>(*)2)</sup>	D	CE Active High, with CE Pull-down, C <sub>L</sub> discharge
②③	Output Voltage <sup>(*)3)</sup>	12~50	ex.) ②=2, ③=8 → 2.8V
④	Output Accuracy	1	±0.02V (1.2~1.9V)、±1% (2.0~5.0V)
⑤⑥-⑦	Packages (Order Unit)	GR-G	USP-4 (3,000/Reel)
		MR-G	SOT-25 (3,000/Reel)
		PR-G	SOT-89-5 (1,000/Reel)

<sup>(\*)1)</sup> The “-G” suffix indicates that the products are Halogen and Antimony free as well as being fully RoHS compliant.

<sup>(\*)2)</sup> For without CE Pull-down or without C<sub>L</sub> discharge function, please contact your local Torex sales office or representative.

<sup>(\*)3)</sup> For the output voltage in 0.05V increments, please contact your local Torex sales office or representative.

- Ordering Information XC6503P 3-Terminal regulator

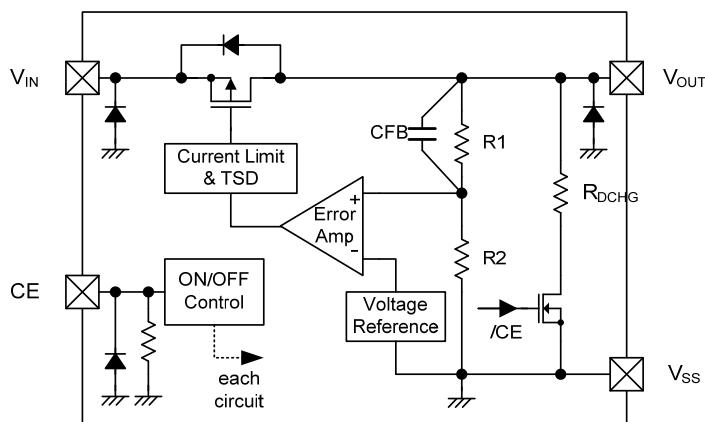

XC6503①②③④⑤⑥-⑦<sup>(\*)1)</sup>

DESIGNATOR	ITEM	SYMBOL	DESCRIPTION
①	Type of Regulator	P	3-Terminal regulator, without CE pin

## ■ OPERATIONAL EXPLANATION

The voltage divided by resistors R1 and R2 is compared with the internal reference voltage by the error amplifier. The P-channel MOSFET which is connected to the V<sub>OUT</sub> pin is then driven by the subsequent output signal. The output voltage at the V<sub>OUT</sub> pin is controlled and stabilized by a system of negative feedback. The current limit circuit and short circuit protection operate in relation to the level of output current and heat dissipation. Current limit circuit and short protection circuit operate with output current and thermal shutdown circuit will operate with heating. Further, the IC's internal circuitry can be shutdown via the CE pin signal.

XC6503D Series

### <C<sub>L</sub> Auto-Discharge Function>

XC6503D can quickly discharge the electric charge at the output capacitor (C<sub>L</sub>), when a low signal to the CE pin, which enables a whole IC circuit put into OFF state, is inputted via the N-channel transistor located between the V<sub>OUT</sub> pin and the V<sub>SS</sub> pin (cf. BLOCK DIAGRAM). The C<sub>L</sub> discharge resistance is set to 430 Ω when V<sub>IN</sub> is 6.0V (TYP.) and V<sub>OUT</sub> is 5.0V (TYP.). Moreover, discharge time of the output capacitor (C<sub>L</sub>) is set by the C<sub>L</sub> auto-discharge resistance (R<sub>DCHG</sub>) and the output capacitor (C<sub>L</sub>). By setting time constant of a C<sub>L</sub> auto-discharge resistance value (R<sub>DCHG</sub>) and an output capacitor value (C<sub>L</sub>) as  $\tau$  ( $\tau = C \times R$ ), the output voltage after discharge via the N-channel transistor is calculated by the following formula.

$$V = V_{OUT} \times e^{-t/\tau}, \text{ or } t = \tau \ln(V_{OUT(E)} / V)$$

( V : Output voltage after discharge, V<sub>OUT(E)</sub> : Initial Output voltage, t: Discharge time,  
 $\tau$  : C<sub>L</sub> auto-discharge resistance R<sub>DCHG</sub> × C<sub>L</sub> Output capacitance

### <Current Limiter, Short-Circuit Protection>

The protection circuit operates as a combination of an output current limiter and fold-back short circuit protection. When load current reaches the current limit level, the output voltage drops. As a result, the load current starts to reduce with showing fold-back curve. The output current finally falls at the level of 120mA when the V<sub>OUT</sub> pin is short-circuited.

### <Thermal Shutdown>

When the junction temperature of the built-in driver transistor reaches the temperature limit, the thermal shutdown circuit operates and the driver transistor will be set to OFF. The IC resumes its operation when the thermal shutdown function is released and the IC's operation is automatically restored because the junction temperature drops to the level of the thermal shutdown release voltage.

### <CE Pin>

The IC's internal circuitry can be shutdown via the signal from the CE pin with the XC6503D series. In shutdown mode, output at the V<sub>OUT</sub> pin will be pulled down to the V<sub>SS</sub> level via R1, R2 and C<sub>L</sub> auto-discharge resistance R<sub>DCHG</sub>. Please note the XC6503P does not have the CE pin.

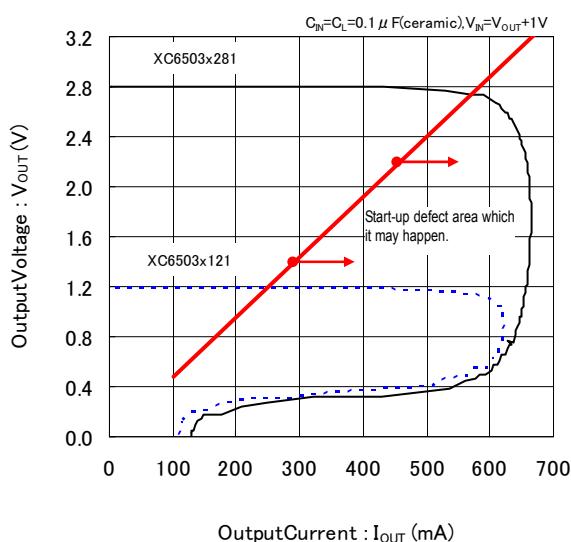

The XC6503D has a pulled down resistor at the CE pin in order to avoid an unstable operation with the CE pin open (the CE pin is left open, operation will be stopped). However, the CE pin input current will increase slightly through the pulled down resistor when operating. If the correct output voltage is applied to the CE pin, the logic is fixed and the IC will operate normally. However, if the medium voltage is input, supply current may increase as a result of an internal through current.

## ■ NOTES ON USE

- For temporary, transitional voltage drop or voltage rising phenomenon, the IC is liable to malfunction should the ratings be exceeded.
- The XC6503 series operates even if without attaching an output capacitor. However, when wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please wire the input capacitor ( $C_{IN}$ ) and the output capacitor ( $C_L$ ) as close to the IC as possible.
- The XC6503 installs fold-back current limit circuits. When start-up, this fold-back load curve affects its start-up characteristics. The XC6503 having output current under 2.4V may not happen to start-up with the load conditions below. In these cases, sequence control should be taken for connecting a load after the start-up execution.

Load Condition for Start-up:  $I_{OUT} \geq V_{OUT(T)}/4.8$

$V_{OUT(T)}$ : Nominal Output Voltage

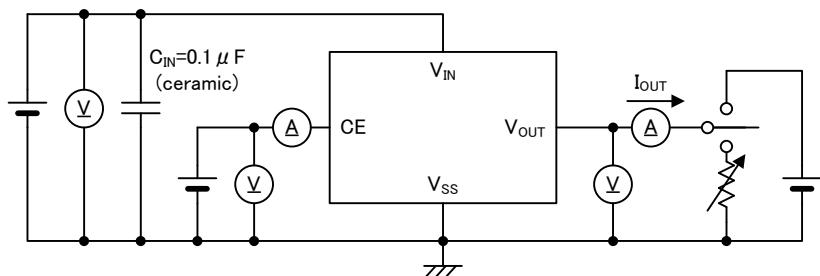

### ● CONDITION

NOMINAL VOLTAGE	LOAD CONDITION FOR START-UP
1.2V	$\leq 250mA$
1.5V	$\leq 312mA$
1.8V	$\leq 375mA$

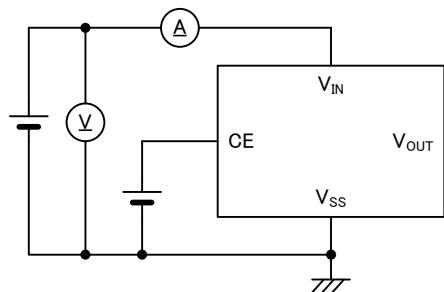

- Torex places an importance on improving our products and its reliability. However, by any possibility, we would request user fail-safe design and post-aging treatment on system or equipment.

### ● USP-4 Power Dissipation

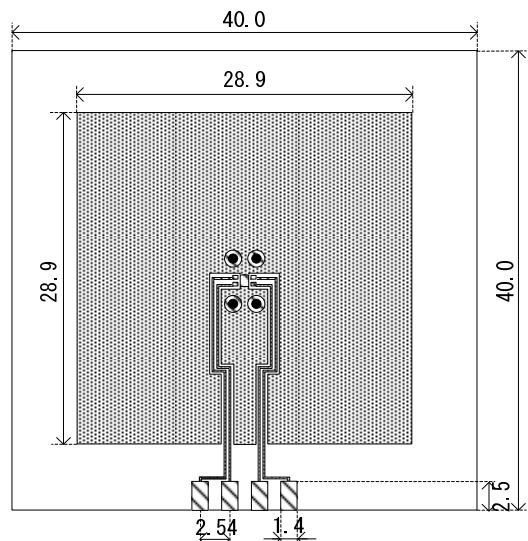

Power dissipation data for the USP-4 is shown in this page.

The value of power dissipation varies with the mount board conditions.

Please use this data as one of reference data taken in the described condition.

#### 1. Measurement Condition (Reference data)

Condition:	Mount on a board
Ambient:	Natural convection
Soldering:	Lead (Pb) free
Board:	Dimensions 40 x 40 mm (1600 mm <sup>2</sup> in one side) Copper (Cu) traces occupy 50% of the board area In top and back faces Package heat-sink is tied to the copper traces
Material:	Glass Epoxy (FR-4)
Thickness:	1.6 mm
Through-hole:	4 x 0.8 Diameter

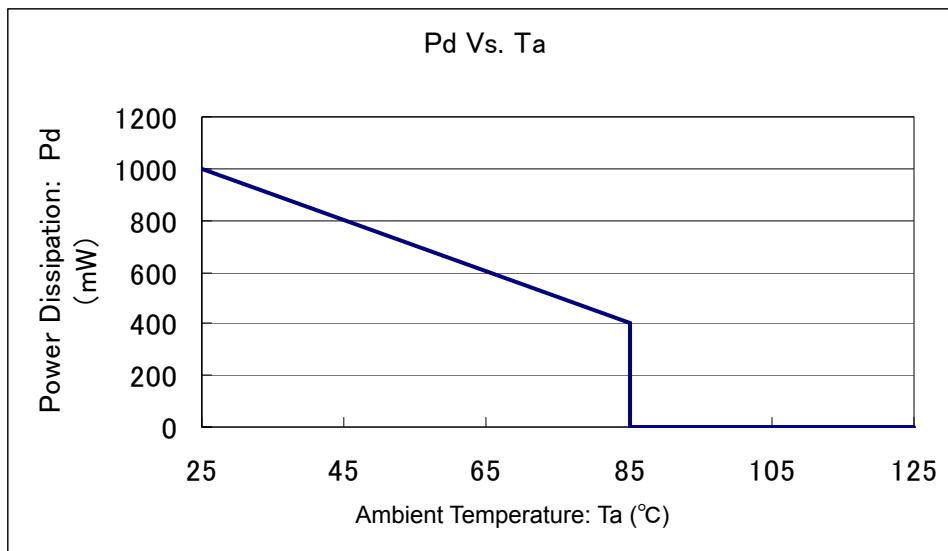

Evaluation Board (Unit: mm)

#### 2. Power Dissipation vs. Ambient temperature

Board Mount ( $T_j$  max = 125°C)

Ambient Temperature (°C)	Power Dissipation $P_d$ (mW)	Thermal Resistance (°C/W)
25	1000	100.00
85	400	

## ■ PACKAGING INFORMATION (Continued)

### ● SOT-25 Power Dissipation

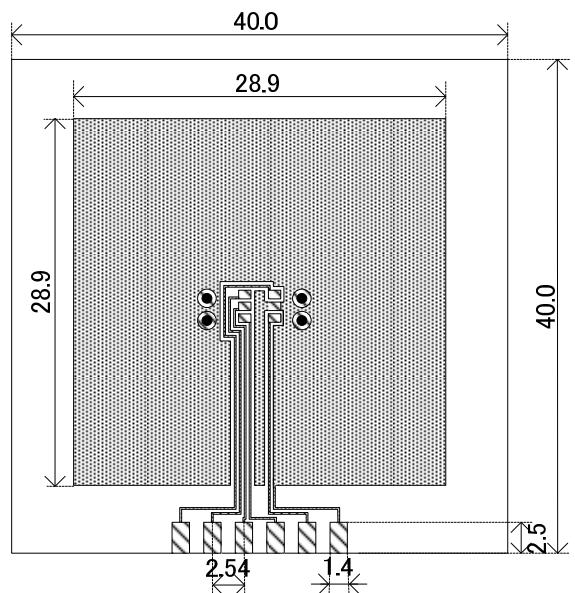

Power dissipation data for the SOT-25 is shown in this page.

The value of power dissipation varies with the mount board conditions.

Please use this data as one of reference data taken in the described condition.

#### 1. Measurement Condition (Reference data)

Condition:	Mount on a board
Ambient:	Natural convection
Soldering:	Lead (Pb) free
Board:	Dimensions 40 x 40 mm (1600 mm <sup>2</sup> in one side) Copper (Cu) traces occupy 50% of the board area In top and back faces Package heat-sink is tied to the copper traces (Board of SOT-26 is used.)
Material:	Glass Epoxy (FR-4)
Thickness:	1.6 mm
Through-hole:	4 x 0.8 Diameter

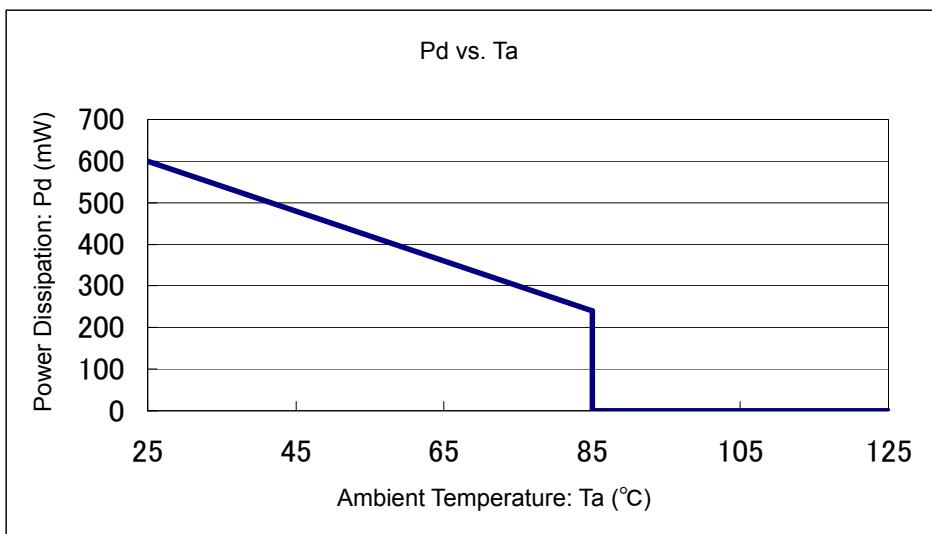

Evaluation Board (Unit: mm)

#### 2. Power Dissipation vs. Ambient temperature

Board Mount ( $T_j$  max = 125°C)

Ambient Temperature(°C)	Power Dissipation Pd(mW)	Thermal Resistance (°C/W)
25	600	166.67
85	240	

## ■PACKAGING INFORMATION (Continued)

### ● SOT-89-5 Power Dissipation

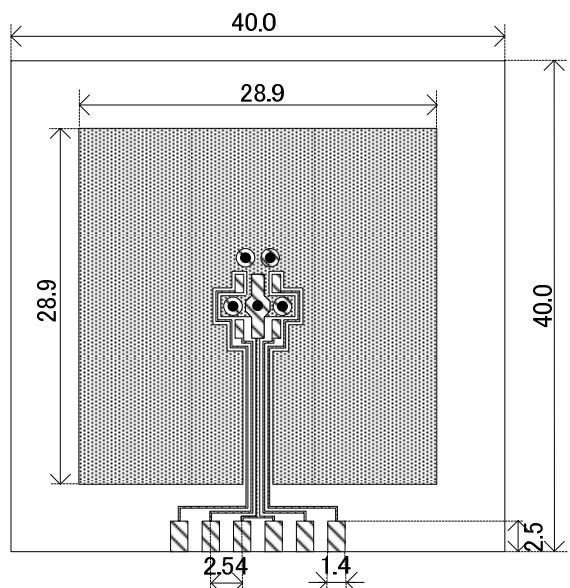

Power dissipation data for the SOT-89-5 is shown in this page.

The value of power dissipation varies with the mount board conditions.

Please use this data as one of reference data taken in the described condition.

#### 1. Measurement Condition (Reference data)

Condition: Mount on a board  
 Ambient: Natural convection  
 Soldering: Lead (Pb) free  
 Board: Dimensions 40 x 40 mm (1600 mm<sup>2</sup> in one side)  
         Copper (Cu) traces occupy 50% of the board area  
         In top and back faces  
         Package heat-sink is tied to the copper traces  
 Material: Glass Epoxy (FR-4)  
 Thickness: 1.6 mm  
 Through-hole: 5 x 0.8 Diameter

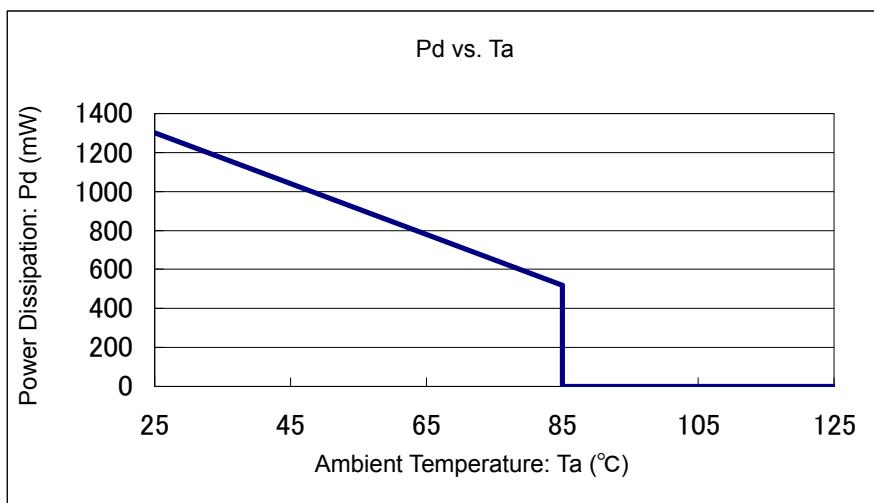

Evaluation Board (Unit: mm)

#### 2. Power Dissipation vs. Ambient temperature

Board Mount ( $T_j$  max = 125°C)

Ambient Temperature (°C)	Power Dissipation $P_d$ (mW)	Thermal Resistance (°C/W)
25	1300	76.92
85	520	

## ■ PACKAGING INFORMATION (Continued)

### ● SOT-89 Power Dissipation

Power dissipation data for the SOT-89 is shown in this page.

The value of power dissipation varies with the mount board conditions.

Please use this data as one of reference data taken in the described condition.

#### 1. Measurement Condition (Reference data)

Condition : Mount on a board

Ambient : Natural convection

Soldering : Lead (Pb) free

Board : Dimensions 40×40mm (1600mm<sup>2</sup> in one side)

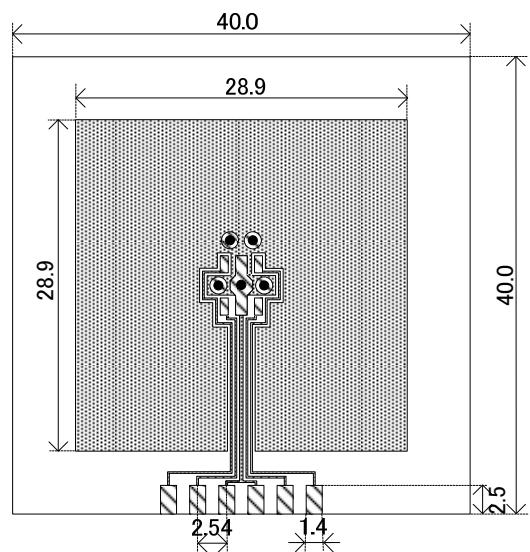

Copper (Cu) traces occupy 50% of the board area  
In top and back faces

Package heat-sink is tied to the copper traces

Material : Glass Epoxy (FR-4)

Thickness : 1.6mm

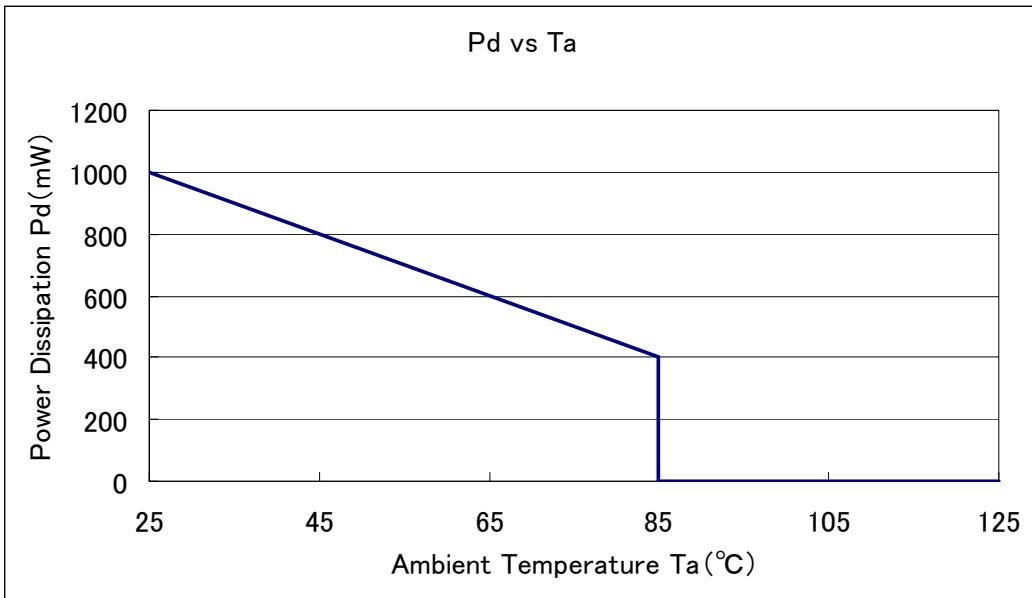

Through-hole : 5 x 0.8 Diameter

#### 2. Power Dissipation vs. Ambient temperature

Board Mount ( Tjmax=125°C )

Ambient Temperature (°C)	Power Dissipation Pd (mW)	Thermal Resistance (°C/W)
25	1000	100.00
85	400	

## ■PACKAGING INFORMATION (Continued)

### ● TO-252 Power Dissipation (Preliminary)

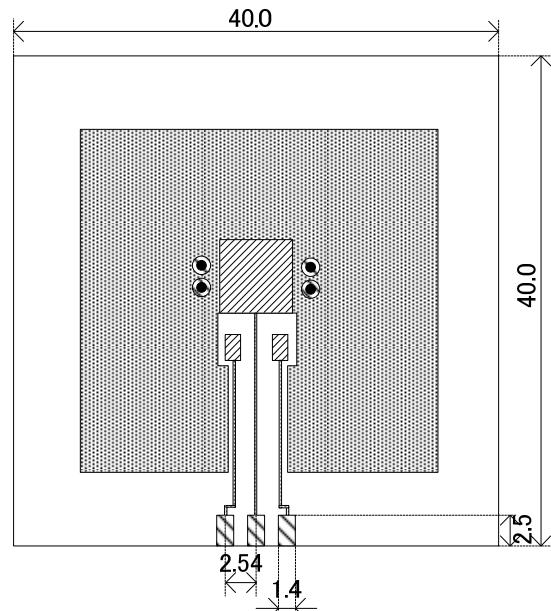

Power dissipation data for the TO-252 is shown in this page.

The value of power dissipation varies with the mount board conditions.

Please use this data as one of reference data taken in the described condition.

#### 1. Measurement Condition (Reference data)

Condition:	Mount on a board
Ambient:	Natural convection
Soldering:	Lead (Pb) free
Board:	Dimensions 40 x 40 mm (1600 mm <sup>2</sup> in one side) Copper (Cu) traces occupy 50% of the board area In top and back faces Package heat-sink is tied to the copper traces
Material:	Glass Epoxy (FR-4)
Thickness:	1.6 mm
Through-hole:	4 x 0.8 Diameter

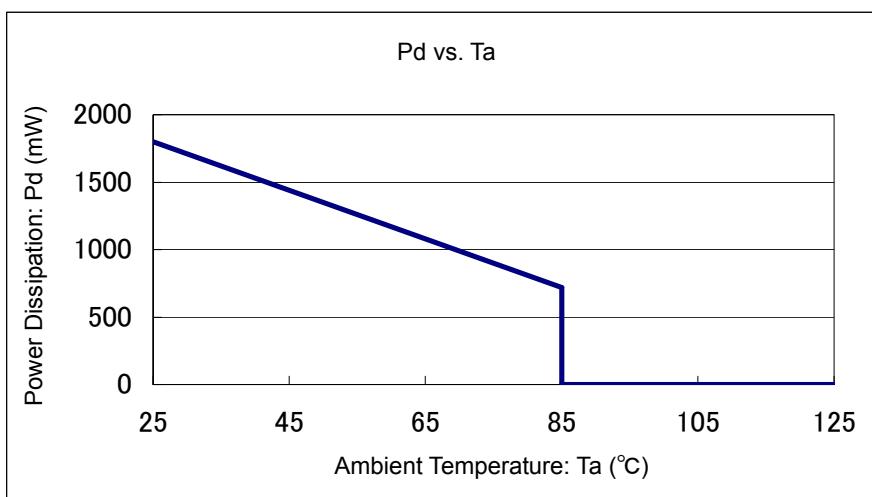

Evaluation Board (Unit: mm)

#### 2. Power Dissipation vs. Ambient temperature

Board Mount ( $T_j$  max = 125°C)

Ambient Temperature (°C)	Power Dissipation Pd (mW)	Thermal Resistance (°C/W)
25	1800	55.56
85	720	

## ■ MARKING RULE

● SOT-25(Under dot), SOT-89, SOT-89-5, USP-4, TO-252 (Preliminary)

① represents product series.
