

# Quad 12-Bit Microprocessor-Compatible D/A Converter

AD390\*

#### **FEATURES**

Four Complete 12-Bit DACs in One IC Package
Linearity Error ± 1/2LSB T<sub>min</sub> - T<sub>max</sub> (AD390K, T)
Factory-Trimmed Gain and Offset
Buffered Voltage Output
Monotonicity Guaranteed Over Full Temperature Range
Double-Buffered Data Latches
Includes Reference and Buffer
Fast Settling: 8µs max to ± 1/2LSB

#### PRODUCT DESCRIPTION

The AD390 contains four 12-bit high speed voltage-output digital-to-analog converters in a compact 28-pin hybrid package. The design is based on a proprietary latched 12-bit DAC chip which reduces chip count and provides high reliability. The AD390 is ideal for systems requiring digital control of many analog voltages where board space is at a premium. Such applications include automatic test equipment, process controllers, and vector-scan displays.

The AD390 is laser-trimmed to  $\pm 1/2$ LSB max nonlinearity (AD390KD, TD) and absolute accuracy of  $\pm 0.05$  percent of full scale. The high initial accuracy is made possible by the use of thin-film scaling resistors on the monolithic DAC chips. The internal buried Zener voltage reference provides excellent temperature drift characteristics (20ppm/°C) and an initial tolerance of  $\pm 0.03\%$  maximum. The internal reference buffer allows a single common reference to be used for multiple AD390 devices in large systems.

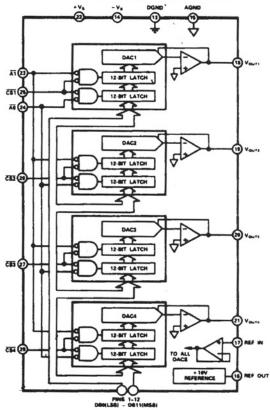

The individual DACs are accessed by the  $\overline{CS1}$  through  $\overline{CS4}$  control inputs and the  $\overline{A0}$  and  $\overline{A1}$  lines. These control signals permit the registers of the four DACs to be loaded sequentially and the outputs to be simultaneously updated.

The AD390 outputs are calibrated for a  $\pm 10V$  output range with positive-true offset binary input coding. A 0 to +10V version is available on special order.

The AD390 is packaged in a 28-lead ceramic package and is specified for operation over the 0 to  $+70^{\circ}$ C and  $-55^{\circ}$ C to  $+125^{\circ}$ C temperature range.

\*Protected by patent numbers 3,803,590; 3,890,611; 3,932,863; 3,978,473; 4,020,486 and other patents pending.

### **FUNCTIONAL BLOCK DIAGRAM**

### **PRODUCT HIGHLIGHTS**

- The AD390 offers a dramatic reduction in printed circuit board space requirements in systems using multiple DACs.
- Each DAC is independently addressable, providing a versatile control architecture for simple interface to microprocessors.
   All latch enable signals are level-triggered.
- The output voltage is trimmed to a full scale accuracy of ±0.05%. Settling time to ±1/2LSB is 8 microseconds maximum.
- An internal 10 volt reference is available or an external reference can be used. With an external reference, the AD390 gain TC is ±5ppm/°C maximum.
- The proprietary monolithic DAC chips provide excellent linearity and guaranteed monotonicity over the full operating temperature range.
- The 28-pin double-width hybrid package provides extremely high functional density. No external components or adjustments are required to provide the complete function.
- The AD390SD and AD390TD feature guaranteed accuracy and linearity over the -55°C to +125°C temperature range.

### NOTES

The AD390 outputs are guaranteed stable for load capacitances up to 300pF.

AD50207-1 J Grade AD50207-2 K Grade AD50207-3 S Grade AD50207-4 T Grade AD50207-7 S/883B Grade AD50207-8 T/883B Grade

Timing specifications appear in Table 2.

<sup>3 ± 10</sup>V range is standard. A 0 to 10V version is also available. To order, use the following part numbers:

FSR means Full Scale Range and is equal to 20V for a ± 10V range.

<sup>\*</sup>Crosstalk is defined as the change in any one output as a result of any other output being driven from - 10V to + 10V into a 2k\O load.

The AD390 can be used with supply voltage as low as ± 11.4V, Figure 10.

Specifications subject to change without notice.

## AD390

ABSOLUTE MAXIMUM RATINGS	Analog Outputs (Pins 16, 18-21)
+ V <sub>S</sub> to DGND 0 to +18V	Indefinite Short to AGND or DGND
-V <sub>s</sub> to DGND 0 to -18V	Momentary Short to $\pm V_S$
Digital Inputs (Pins 1-12, 23-28) to DGND1 to +7V	Storage Temperature −65°C to +150°C
Ref In to DGND ± V <sub>S</sub>	Lead Temperature (Soldering, 10 Seconds) + 300°C
AGND to DGND ±0.6V	

### **ORDERING GUIDE**

Model	Temperature Range	Gain Error 25°C	Linearity Error T <sub>min</sub> -T <sub>max</sub>	Package Option*
AD390JD	0 to + 70°C	±4LSB	± 3/4LSB	DH-28
AD390KD	0 to +70°C	±2LSB	± 1/2LSB	DH-28
AD390SD	-55°C to +125°C	±4LSB	± 3/4LSB	DH-28
