

130 μ V Maximum Offset Voltage Op Amp in TSOT AD8677

FEATURES

- Low offset voltage: 130 μ V max
- Input offset drift: 1.5 μ V/ $^{\circ}$ C max
- Low noise: 0.25 μ V p-p
- High gain, CMRR and PSRR: 115 dB min
- Low supply current: 1.1 mA
- Wide supply voltage range: \pm 4 V to \pm 18 V operation

APPLICATIONS

- Medical and industrial instrumentation
- Sensors and controls
 - Thermocouple
 - RTDs
 - Strain bridges
 - Shunt current measurements
- Precision filters

GENERAL DESCRIPTION

The AD8677 is the next generation of precision, ultralow offset amplifiers. It builds on the high performance of the OP07 and integrates lower power (1.1 mA typical), lower input bias current (\pm 1 nA maximum), and higher CMRR/PSRR (130 dB) in the small TSOT package. Operation is fully specified from \pm 5 V to \pm 15 V supply.

The AD8677 provides higher accuracy than industry-standard OP07-type amplifiers due to Analog Devices' iPolar™ process, which supports enhanced performance in a smaller footprint. These performance enhancements include wider output swing, lower power, and higher CMRR (common-mode rejection ratio) and PSRR (power supply rejection ratio). The AD8677 maintains stability of offsets and gain virtually regardless of variations in time or temperature. Excellent linearity and gain accuracy can be maintained at high closed-loop gains.

The AD8677 is fully specified over the extended industrial temperature range of -40° C to $+125^{\circ}$ C. The AD8677 amplifier is available in the tiny, 5-lead TSOT and the popular 8-lead, narrow SOIC lead-free packages.

PIN CONFIGURATIONS

ABSOLUTE MAXIMUM RATINGS

Table 3.

Parameter	Value
Supply Voltage	$\pm 18\text{ V}$
Input Voltage	$\pm \text{V Supply}$
Differential Input Voltage	$\pm 0.7\text{ V}$
Output Short-Circuit Duration to GND	Indefinite
Storage Temperature Range UJ-5, R Package	-65°C to $+150^\circ\text{C}$
Operating Temperature Range	-40°C to $+125^\circ\text{C}$
Junction Temperature Range RM, R Package	-65°C to $+150^\circ\text{C}$
Lead Temperature (Soldering, 10 sec)	$+300^\circ\text{C}$

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

THERMAL RESISTANCE

θ_{JA} is specified for the worst-case conditions, that is, a device soldered in a circuit board for surface-mount packages.

Table 4.

Package Type	θ_{JA}	θ_{JC}	Unit
5-Lead TSOT (UJ-5)	207	61	$^\circ\text{C}/\text{W}$
8-Lead SOIC (R-8)	158	43	$^\circ\text{C}/\text{W}$

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Electrostatic charges as high as 4000 V readily accumulate on the human body and test equipment and can discharge without detection. Although this product features proprietary ESD protection circuitry, permanent damage may occur on devices subjected to high energy electrostatic discharges. Therefore, proper ESD precautions are recommended to avoid performance degradation or loss of functionality.
