Data Sheet | March 27, 2008 | FN6452.1

LDO with Low I_{SUPPLY}, High PSRR

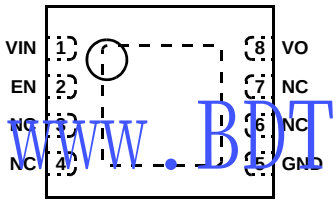
ISL9005A is a high performance Low Dropout linear regulator capable of sourcing 300mA current. It has a low standby current and high-PSRR and is stable with output capacitance of 1µF to 10µF with ESR of up to 200mΩ.

The ISL9005A has a high PSRR of 75dB and an output noise of less than 45µV_{RMS}. When coupled with a no load quiescent current of 50µA, (typical) and 0.1µA shutdown current, the ISL9005A is an ideal choice for portable wireless equipment.

Several different fixed voltage outputs are standard. Output voltage options for each LDO range are from 1.5V to 3.3V. Other output voltage options may be available upon request.

Pinout

ISL9005A
(8 LD 2x3 DFN)
TOP VIEW



Features

- 300mA high performance LDO
- Excellent transient response to large current steps
- Excellent load regulation: <0.1% voltage change across full range of load current
- High PSRR: 75dB @ 1kHz
- Wide input voltage capability: 2.3V to 6.5V
- Very low quiescent current: 50µA
- Low dropout voltage: typically 200mV @ 300mA
- Low output noise: typically 45µV_{RMS} @ 100µA (1.5V)
- Stable with 1µF to 10µF ceramic capacitors
- Soft-start to limit input current surge during enable
- Current limit and overheat protection
- ±1.8% accuracy over all operating conditions
- Tiny 2mmx3mm 8 Ld DFN package
- -40°C to +85°C operating temperature range
- Pb-free (RoHS compliant)

Applications

- PDAs, cell phones and smart phones
- Portable instruments, MP3 players
- Handheld devices, including medical handhelds

NOTES:

1. These Intersil Pb-free plastic packaged products employ special Pb-free material sets; molding compounds/die attach materials and 100% matte tin plate PLUS ANNEAL - e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations. Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
2. Please refer to TB347 for details on reel specifications.
3. For other output voltages, contact Intersil Marketing.

Absolute Maximum Ratings

Supply Voltage (VIN) . . . . . +7.1V
VO Pin . . . . . +3.6V
All Other Pins . . . . . -0.3 to (VIN + 0.3)V

Recommended Operating Conditions

Ambient Temperature Range (T_A) . . . . . -40°C to +85°C
Supply Voltage (VIN) . . . . . 2.3V to 6.5V

Thermal Information

Thermal Resistance (Notes 4, 5)	θ_{JA} (°C/W)	θ_{JC} (°C/W)
8 Ld 2x3 DFN Package	69	10

Junction Temperature Range . . . . . -40°C to +125°C
Operating Temperature Range . . . . . -40°C to +85°C
Storage Temperature Range . . . . . -65°C to +150°C
Pb-free reflow profile . . . . . .see link below
http://www.intersil.com/pbfree/Pb-FreeReflow.asp

CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

NOTES:

4. θ_{JA} is measured in free air with the component mounted on a high effective thermal conductivity test board with “direct attach” features. See Tech Brief TB379.
5. For θ_{JC}, the “case temp” location is the center of the exposed metal pad on the package underside.

Electrical Specifications

Unless otherwise noted, all parameters are guaranteed over the operational supply voltage and temperature range of the device as follows: T_A = -40°C to +85°C; V_{IN} = (V_O + 0.5V) to 5.5V with a minimum V_{IN} of 2.3V; C_{IN} = 1µF; C_O = 1µF.

PARAMETER	SYMBOL	TEST CONDITIONS	MIN (Note 8)	TYP	MAX (Note 8)	UNITS
DC CHARACTERISTICS						
Supply Voltage	V_{IN}		2.3		6.5	V
Ground Current		Quiescent condition: I_O = 0µA				
	I_{DD}	LDO active		50	75	µA
Shutdown Current	I_{DDS}	LDO disabled @ +25°C		0.1	1.0	µA

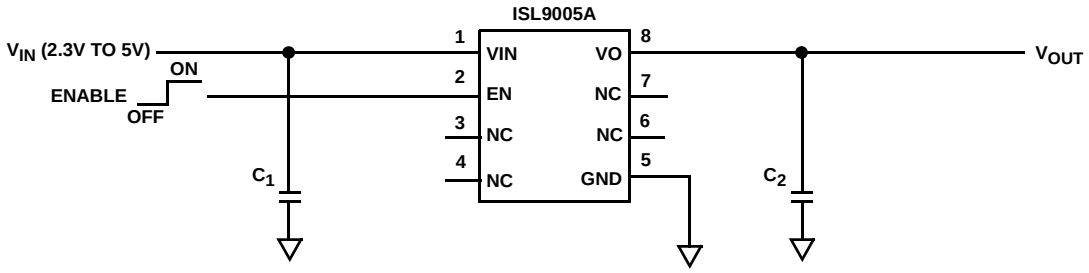
Pin Description

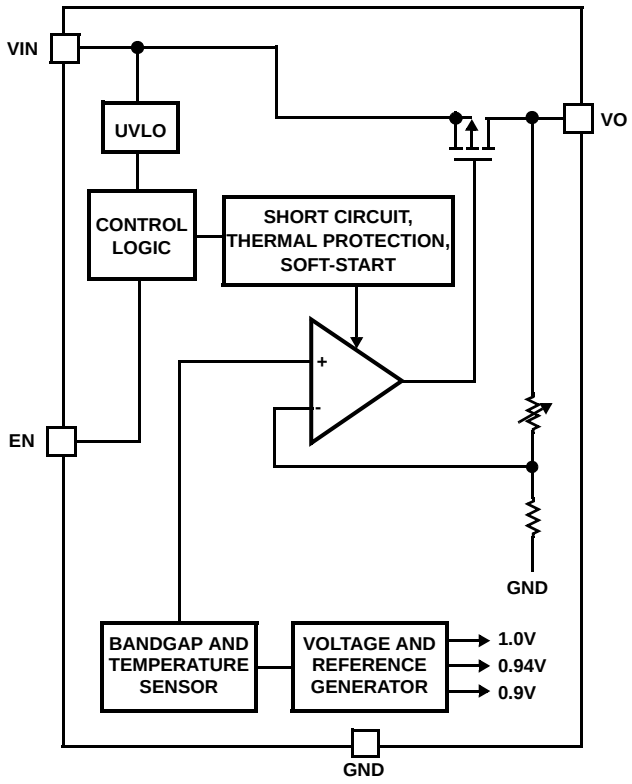
PIN NUMBER	PIN NAME	DESCRIPTION
1	VIN	Supply Voltage/LDO Input: Connect a 1µF capacitor to GND.
2	EN	LDO Enable.
3	NC	Do not connect.
4	NC	Do not connect.
5	GND	GND is the connection to system ground. Connect to PCB Ground plane.
6	NC	Do not connect.
7	NC	Do not connect.
8	VO	LDO Output: Connect capacitor of value 1µF to 10µF to GND (1µF recommended).

Typical Application



C_1, C_2: 1µF X5R CERAMIC CAPACITOR

Block Diagram



Functional Description

The ISL9005A contains all circuitry required to implement a high performance LDO. High performance is achieved through a circuit that delivers fast transient response to varying load conditions. In a quiescent condition, the ISL9005A adjusts its biasing to achieve the lowest standby current consumption.

The device also integrates current limit protection, smart thermal shutdown protection, and soft-start. Smart thermal shutdown protects the device against overheating.

Power Control

The ISL9005A has an enable pin (EN) to control power to the LDO output. When EN is low, the device is in shutdown mode. During this condition, all on-chip circuits are off, and the device draws minimum current, typically less than 0.1µA. When the enable pin is asserted, the device first monitors the output of the UVLO detector to ensure that VIN voltage is at least about 2.1V. Once verified, the device initiates a start-up sequence. During the start-up sequence, trim settings are first read and latched. Then, sequentially, the bandgap, reference voltage and current generation circuitry power-up. Once the references are stable, a fast-start circuit powers up the LDO.

During operation, whenever the VIN voltage drops below about 1.84V, the ISL9005A immediately disables the LDO output. When VIN rises back above 2.1V, the device re-initiates its start-up sequence and LDO operation will resume automatically.

Reference Generation

The reference generation circuitry includes a trimmed bandgap, a trimmed voltage reference divider, a trimmed current reference generator, and an RC noise filter.

The bandgap generates a zero temperature coefficient (TC) voltage for the reference divider. The reference divider provides the regulation reference and other voltage references required for current generation and over-temperature detection.

The current generator outputs references required for adaptive biasing as well as references for LDO output current limit and thermal shutdown determination.

LDO Regulation and Programmable Output Divider

The LDO Regulator is implemented with a high-gain operational amplifier driving a PMOS pass transistor. The design of the ISL9005A provides a regulator that has low quiescent current, fast transient response, and overall stability across all operating and load current conditions. LDO stability is guaranteed for a 1µF to 10µF output capacitor that has a tolerance better than 20% and ESR less than 200mΩ, and the design is performance-optimized for a 1µF output capacitor. Unless limited by the application, use of an output capacitor value above 4.7µF is not recommended as LDO performance improvement is minimal.

Soft-start circuitry integrated into each LDO limits the initial ramp-up rate to about 30µs/V to minimize current surge. The ISL9005A provides short-circuit protection by limiting the output current to about 425mA.

The LDO uses an independently trimmed 1V reference as its input. An internal resistor divider drops the LDO output voltage down to 1V. This is compared to the 1V reference for regulation. The resistor division ratio is programmed in the factory.

Overheat Detection

The bandgap outputs a proportional-to-temperature current that is indicative of the temperature of the silicon. This current is compared with references to determine if the device is in danger of damage due to overheating. When the die temperature reaches about +140°C, if the LDO is sourcing more than 50mA it shuts down until the die cools sufficiently. Once the die temperature falls back below about +110°C, the disabled LDO is re-enabled and soft-start automatically takes place.

NOTES:

1. Dimensioning and tolerancing conform to ASME Y14.5-1994.
2. N is the number of terminals.
3. Nd refers to the number of terminals on D.
4. All dimensions are in millimeters. Angles are in degrees.
5. Dimension b applies to the metallized terminal and is measured between 0.25mm and 0.30mm from the terminal tip.
6. The configuration of the pin #1 identifier is optional, but must be located within the zone indicated. The pin #1 identifier may be either a mold or mark feature.
7. Dimensions D2 and E2 are for the exposed pads which provide improved electrical and thermal performance.
8. Nominal dimensions are provided to assist with PCB Land Pattern Design efforts, see Intersil Technical Brief TB389.
