

Audible Alarm

Instruction Manual

[TYPE : BK]

We thank you for purchasing PATLITE Audible Alarm. Before you start using the product, please read this instruction manual carefully to use the product correctly. Please store this document in a safe place. Be sure to read this document again when you are about to perform tasks such as maintenance and repair.

And if you have any questions, contact a branch office or the technical support printed on the last page.

Safety Precautions

The precautions which must be observed to prevent damage to the person using the product, to people around it, or to property are described in a manner shown below

The seriousness of injury or damage caused by ignoring the indication and using the product in a wrong way is categorized with the indications below and descriptions are added to each of them

The sections with this indication contain "items which could cause death or serious injury" if ignored.

The sections with this indication contain "items which could cause injury or property damage only" if ignored.

1. Cautions Which Must Be Observed for Safety Use

Be sure to turn the power off before wiring or installing the product. Failure to do so may cause electric shock.

Do not disassemble or modify the product. There is a risk of fire, electrical shock etc. For repair, check etc. of inside the product, please inquire to each sales office or technical consultation service written in the last page.

Take care to perform wiring correctly. If the wiring is incorrect, internal circuit may be damaged by fire, and it may also be a cause of fire.

As for the power source, be sure to use this product within the allowable range of voltage. Failure to do so may be a cause of fire or damage to the product. Be sure to let specialists perform installation task which requires construction work. Failure to do so may cause electric shock, fire, or falling.

To protect power source circuit and internal circuit of the product, be sure to install external fuse.

Failures caused by using the product in ways not observing the Warnings and Cautions, by disassembling or converting the product, or by natural disaster are not covered under warranty. And do not use the product in ways other than the ways described in this document.

Other Precautions

Use the product in an environment where there is no electromagnetic or inductive noise. Speakers are known to generate noise.

Use the product in an environment where there is no corrosive gas.

Failure to do so may cause malfunction.

Before you start working on the product, discharge static electricity from your body. By touching another grounded metal part with bare hand, the static electricity can be discharged.

Perform fitting of each part at a recommended torque value.

Pay attention not to lose the parts such as the front cover, Terminal cover etc. which are to be detached at performing work.

When the product is used for security purposes in which safety is emphasized, be sure to perform daily maintenance, and design a system which is capable of tackling the occurrence of unlikely event such as malfunctioning or failure.

Do not use it at the place where vibration exists that is exceeding the specification. There is a risk of damage and/or falling of the main body.

Do not use the product as fire alarm.

2. Model Indicating Format

BK - 24 A P - J

Normal-rated voltage
24 : 12-24V DC
100 : 100 V AC
220 : 220V AC

Sound Chart type
A : Type A
C : Type C
D : Type D
E : Type E

Connectable Transistor
None : NPN type
P : PNP type
(*P is custom made)

Body color
J : Light gray
K : Dark gray

3. Part Names

4. How to Install

Install the product according to the procedure below.

Create mounting holes on a mounting surface (board thickness: 1mm - 10mm) where there is enough space for the mounting hardware. (See the mounting dimensions diagram)

- Insert the product from the front of the mounting surface.
- Attach the mounting hardware which comes with the product to the holes on the side of the product.
- Then fasten the screws of the mounting hardware. (Recommended fastening torque: $0.7 \pm 0.1\text{N} \cdot \text{m}$)

Confirm that the product and the mounting hardware are installed properly.

Warning

Be sure to turn the power off before installing the product. Failure to do so may cause electric shock. Be sure to let specialists perform installation task which requires construction work. Failure to do so may cause electric shock, fire, or falling.

Caution

Choose a location for the mounting surface where it has enough strength to support the weight of the product, and where there is less vibration. Failure to do so may be the cause of injury or damage to the product. Be sure to use both pieces of mounting hardware, and fasten them with the recommended fastening torque. Failure to do so may be the cause of injury or damage to the product.

Other Precautions

Secure a enough space in which the mounting hardware can also be installed when choosing a mounting surface. Install the product on a flat surface without bumps and dips. Failure to do so may weaken its resistance to water and dust. To prevent the product from falling in places where vibration may be generated, apply thread locking adhesive or the like, and perform periodic checking of the tightness of the mounting hardware. When mounting it at a high place, choose the place where a foothold exists for facilitating repair work. If it used under the connected state to the power supply, then provide a switch which can easily cut off power supply in proximity to the main body, for the safety purpose.

Information

The vibration sound may occur when a mounting surface resonates depending on the material, thickness of a mounting surface or the volume of products.

5. How to Perform Wiring

Before wiring the product, remove the terminal cover. And after the completion of the wiring attach the terminal cover.

For the external contact of CH, use no-voltage contact circuit such as relay switch or open collector circuit (NPN type). As for the contact capacity, see the table 1 to 3.

The terminal screws should be fastened with the recommended fastening torque ($0.3\text{N} \cdot \text{m}$).

Wiring example

Table1.CH circuit

No-voltage contact circuit	NPN open collector circuit
Outside contact 6mA BK Each CH 12V (15V) COM () : BK-24	Outside contact 6mA BK Each CH 12V (15V) COM () : BK-24

Table2.Inrush current and Fuse

Model	Inrush current	Fuse
BK-24	Max 20A/ 5ms	125V 1A
BK-100	None	125V 0.5A
BK-220	None	250V 0.5A

Table3.Contact capacity of CH

Current capacity	10mA or higher
Withstand voltage	DC20V or higher
Leakage current	0.1mA or lower
ON voltage(Vsat)	1V or lower

Warning

Be sure to turn the power off before you start wiring. Failure to do so may cause electric shock. Be careful not to make a mistake in wiring. Failure to do so may cause damage to the internal circuit by fire, and it may cause fire.

Caution

To protect the power source circuit and the internal circuit of the product, be sure to install an external fuse. The terminal screws should be fastened with the recommended fastening torque ($0.3\text{N} \cdot \text{m}$). Failure to do so may cause short circuit due to disconnection of wire, and damage to the product.

Other Precautions

Before switching on the power supply, confirm that the wiring is correctly performed. For countermeasure of noise, it is recommended to perform wiring as short as possible, and to use shielded wires. In addition, if a signal line is passing along high voltage cables or its wiring is located at the place likely to receive induction noise, there is a risk of malfunction by the effort of noise. If a no-voltage contact such as a relay or a switch etc. is used for power supply line, select the contact for which rush current is considered. If capacity is insufficient, it will become a cause of welding(deposition) of the contact and/or malfunction. The use of M3 ring terminals with insulating coating is recommended for the wiring of terminal block to prevent disconnection of wires.

6. How to Use the Product

6-1 Opening and Closing the Front Cover

Open or close the front cover according to the procedure shown below when performing tasks such as adjusting the volume of the sound or selecting the sound group.

Other Precautions

Attach the waterproofing rubber for the slot securely. Failure to do so may weaken the product's resistance to water and dust. Fasten the mounting screw for front cover with the recommended fastening torque. In places where vibrations occur, the front cover may fall or the product may be damaged.

6-2. Selecting a Sound Group

Use the sound group selection switch to select a group from the 16 types from A to P. Use a flat-blade screwdriver with the blade thickness of 1.0mm or thinner for turning the switch. (Factory default setting: Sound group A)

Sound group A to H

By bit input, a sound is played which corresponds to each Sound Group. Regarding the operation, refer to "6-5-1.Bit input". In addition, Sounds can be freely combined by utilizing a SD card in the case of the group H. Refer to "6-3.How to Combine Sounds".

Sound group I to O

A sound "5.Rapid Hi-Lo" is played. So, use it for confirming operation and at sound volume adjustment.

Sound group P

By binary input, a sound is played which corresponds to Sound list. Regarding the operation, refer to "6-5-2.Binary input".

Other Precautions

Make sure that there is no misalignment with the sound group selection switch when selecting. If there is misalignment as shown in the figure on the right, the sound group selected may not play.

6-3.How to Combine Sounds

When the sound group H is selected, sounds can be chosen from the 32 sounds and combined freely using an SD card.

Items prepared by customers

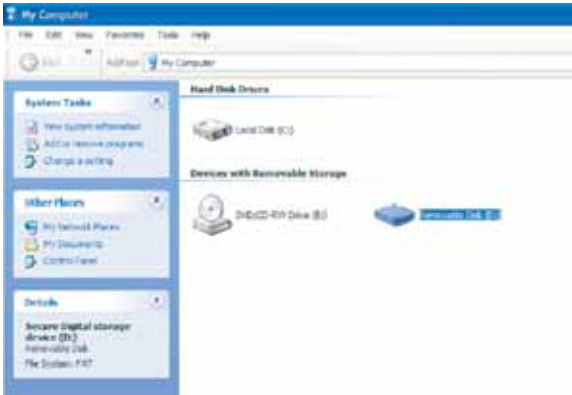

SD card (Type: SDV-128P Sold separately), Personal computer, SD card Reader/Writer

6-3-1.Creating the sound combination data

By using a personal computer, data consisting of different sounds is created
Connect SD card Reader/Writer to PC, and then insert an SD card.

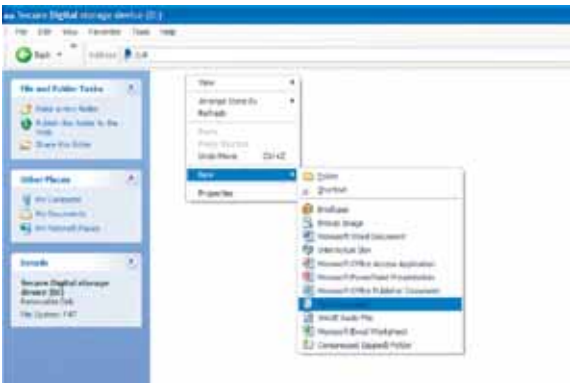

In the My Computer of the PC, open the drive into which the SD card is inserted.

Within the window opened, click with the right mouse button, and point New Document and then choose Text Document.

* The name may vary such as notepad depending on the OS and its version.

Change the file name of the created text document to

【 OTO-LIST.txt 】

* Use half-size upper- or lowercase letters for the file name.

If the extension ".txt" is not displayed when the text document is created, change the file name to [OTO-LIST].

Enter the number of the sound (see 6-2. Selecting a Sound Group) you want to combine into the text document created in and store it in the SD card.

* Enter the sound number with half-size numbers of 16 digits.

[Example]

When a combination of the following sounds are to be created with the type BK- A.

CH1. Beep(slow intermittent hom) CH2. Amaryllis CH3. Synthesized Piano
CH4. Grandfather's Clock CH5. The camptown Races CH6. Shutter
CH7. Cuckoo CH.8 Mary had a little Lamb

Input the number [0125073120022119] in the text file, and store the file.

6-3-2.Transferring the sound combination data

The sound combination data created in "6-3-1. Creating the sound combination data" is transferred to this product.

Turn on the power of this product, and check if the COM terminal and CH terminal is not short-circuiting.

Open the front cover, and insert the SD card, in which the data created in "6-3-1. Creating the sound combination data" is stored, into the card slot. And then, data transfer is started automatically.

When transferring the sound data is completed, it is informed by the sound 'Pee'.Then, pull out the SD card.

* The writing completes in 1 second or less. When it is informed by the sound 'Pipipipi' or there is no reaction, the data transfer is not normally completed.Confirm the contents of data and operation procedure.In addition, take note that if the volume control is set to the minimum, the informing sound cannot be heard.

Set the sound group selection switch to H, and confirm the sound of each channel .

Other Precautions

As for the SD card, use the type SDV-128P sold separately. Operation is not guaranteed if an SD card of any other type is used.

When formatting the SD card, do it in FAT16.

When inserting the SD card, pay attention to the orientation of the SD card. And do not forcibly insert the SD card into the card slot. Doing so may cause damage to the SD card and/or the product.

Pay attention that no foreign object enter into the card slot.

6-4.Adjusting the Sound Volume

The sound volume can be adjusted using the volume control. Use a flat-blade screwdriver with the blade thickness of 1.0mm or thinner for turning the volume control.

Other Precautions

Turn the volume control lightly. It may be damaged if a torque of 0.3N · m or more is applied.

Information

If sound volume is increased, sound cracking may occur depending on a sound.
Even if the volume is set at the minimum level, the sound condition may not become silent, depending on the environment of usage.

6-5.How to Play sounds

When the COM terminal and the terminal CH 1 - CH 8 are short-circuited after turning on the power, the sound of the channel of the selected group is played.

Sound is played while the terminals are short-circuited.(Level hold input)

When this product is operated by turning on the power, it takes about 1 second to play a sound.

6-5-1.Bit input (Sound group selection switch:A to H)

By short-circuiting the COM terminal and each CH terminal, the sound is played that corresponds to each channel.

If there is short circuit of the two or more CH terminal and COM terminal

at the same time, the sound of the CH with a larger number is played.

Priority order of CH CH8 > CH7 > > CH2 > CH1

6-5-2.Binary input (Sound group selection switch:P)

By short-circuiting the COM terminal and eash from CH1 terminal to CH6 terminal, the sound among the No. 1 to No.32 is played, depending on the state of each short circuit. (Refer to the corresponding table for binary input)

Corresponding table for binary input

Sound No	CH1	CH2	CH3	CH4	CH5	CH6	Sound No	CH1	CH2	CH3	CH4	CH5	CH6	Sound No	CH1	CH2	CH3	CH4	CH5	CH6
01	1	0	0	0	0	0	12	0	0	1	1	0	0	23	1	1	1	0	1	0
02	0	1	0	0	0	0	13	1	0	1	1	0	0	24	0	0	0	1	1	0
03	1	1	0	0	0	0	14	0	1	1	1	0	0	25	1	0	0	1	1	0
04	0	0	1	0	0	0	15	1	1	1	1	0	0	26	0	1	0	1	1	0
05	1	0	1	0	0	0	16	0	0	0	0	1	0	27	1	1	0	1	1	0
06	0	1	1	0	0	0	17	1	0	0	0	1	0	28	0	0	1	1	1	0
07	1	1	1	0	0	0	18	0	1	0	0	1	0	29	1	0	1	1	1	0
08	0	0	0	1	0	0	19	1	1	0	0	1	0	30	0	1	1	1	1	0
09	1	0	0	1	0	0	20	0	0	1	0	1	0	31	1	1	1	1	1	0
10	0	1	0	1	0	0	21	1	0	1	0	1	0	32	0	0	0	0	0	1
11	1	1	0	1	0	0	22	0	1	1	0	1	0							

* The "1" in this table means short circuit of the COM terminal and CH terminal.

* In the case of input contacts which are not described in the table or CH7,8, the sound "5.Rapid Hi-Lo" is played.

Information

Although pop noise is sometimes generated at ON/OFF of power supply, it is not a failure.

7. Before You Request a Repair

Contents of trouble	Points to be checked	Method of action/treatment
Sound is not played	Is the power supplied?	Confirm the wiring.(5.How to perform wiring)
	Are the COM terminal and CH terminal short-circuited correctly?	Confirm the wiring.(5.How to perform wiring)
	Is the volume control not set to the minimum?	Adjust the volume.(6.4 Adjusting the Sound Volume)
A different channel is played	Are the COM terminal and CH terminal short-circuited correctly?	Confirm the wiring.(5.How to perform wiring)
	Is it correctly selected with the sound group selection switch?	Confirm the sound group selection switch.(6-2 Selecting a Sound Group)
SD card is not read.	Is the power supplied?	Confirm the wiring.(5.How to perform wiring)
	Is there a text document stored in the SD card?	Confirm a text document in the SD card.
	Are the file name and the content of the text document correct?	(6-3.How to Combine Sounds)
	Is the location of the stored file correct?	
	Is the SD card correctly inserted?	Confirm the SD card.
	Is the SD card of our company's optional item used?	(6-3-2Transferring the sound combination data.)
	Is the volume set to the minimum level or not?	Adjust the volume.(6.4 Adjusting the Sound Volume)

If the product does not operate correctly even after it is properly installed and handled, contact a branch office or the technical support printed on the last page.

8. Specifications

Model	BK-24	BK-100	BK-220
Rated Voltage	12 - 24V DC	100V AC (50/60Hz)	220V AC (50/60Hz)
Voltage Range	10.8 - 26.4V DC	100V AC ± 10%	220V AC ± 10%
Current Consumption	Maximum 481mA	Maximum 145mA	Maximum 71mA
Sound Pressure Level	Maximum 95dB (Fit the product on the plate of ϕ300mm, and measure the level with the sound 5."Rapid Hi-Lo" at the distance of 1m from the center of the product, in the front direction. Volume is adjustable. *The sound pressure level may be lowered depending on the sound and environment of usage. *The sound pressure level of type BK-24 may be lowered in case of usage by 17V DC or less.		
CH input method	Playing while short-circuiting between each CH terminal and COM terminal. Bit input (In case of setting of sound group from A to H) / Binary input(In case of setting of sound group from A to H)		
Number of playing channels	Bit input : 8 channels / Binary input : 32 channels		
Operating Temperature Range	-20 ~ 50		
Relative Humidity	RH 85% or lower (no condensation)		
Mounting Direction	Indoor: Normal, reverse, and lateral direction are possible (Normal direction only in places where water may be splashed on it). Outdoor: Normal direction only		
Protection Level	IP54 (When the panel is mounted in normal direction; Front only)		
Insulation resistance	1M and above (At 500VDC)	Between charged metal part and non-charged metal part.	
Withstand voltage	500VAC for 1 min.	1000VAC for 1 min.	1500VAC for 1 min.
Resistance to Vibration	45m/s ²	19.6m/s ²	
Mass	350g ± 10%	530g ± 10%
