FAIRCHILD

SEMICONDUCTOR

74F148 8-Line to 3-Line Priority Encoder

General Description

The F148 provides three bits of binary coded output representing the position of the highest order active input, along with an output indicating the presence of any active input. It is easily expanded via input and output enables to provide priority encoding over many bits. April 1988 Revised July 1999

Features

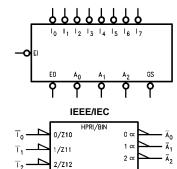

- Encodes eight data lines in priority
- Provides 3-bit binary priority code
- Input enable capability
- Signals when data is present on any input
- Cascadable for priority encoding of n bits

Ordering Code:

$\overline{A}_0 - \overline{A}_2$	Address Outputs (Active LOW)	50/33.3	–1 mA/20 mA	

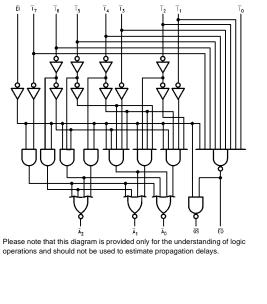

Functional Description

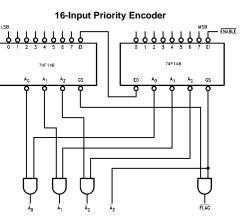

The F148 8-input priority encoder accepts data from eight active LOW inputs (\bar{l}_0 – \bar{l}_7) and provides a binary representation on the three active LOW outputs. A priority is assigned to each input so that when two or more inputs are simultaneously active, the input with the highest priority is represented on the output, with input line 7 having the highest priority. A HIGH on the Enable Input (EI) will force all outputs to the inactive (HIGH) state and allow new data to settle without producing erroneous information at the out-

puts.A Group Signal output (\overline{GS}) and Enable Output (\overline{EO}) are provided along with the three priority data outputs (\overline{A}_2 , \overline{A}_1 , \overline{A}_0). \overline{GS} is active LOW when any input is LOW: this indicates when any input is active. \overline{EO} is active LOW when all inputs are HIGH. Using the Enable Output along with the Enable Input allows cascading for priority encoding on any number of input signals. Both \overline{EO} and \overline{GS} are in the inactive HIGH state when the Enable Input is HIGH.

Logic Diagram

Application

Absolute Maximum Ratings(Note 1)

	•
Storage Temperature	-65°C to +150°C
Ambient Temperature under Bias	-55°C to +125°C
Junction Temperature under Bias	-55°C to +150°C
V _{CC} Pin Potential to Ground Pin	-0.5V to +7.0V
Input Voltage (Note 2)	-0.5V to +7.0V
Input Current (Note 2)	-30 mA to +5.0 mA
Voltage Applied to Output	
in HIGH State (with $V_{CC} = 0V$)	
Standard Output	–0.5V to V_{CC}
3-STATE Output	-0.5V to +5.5V
Current Applied to Output	
in LOW State (Max)	twice the rated I _{OL} (mA)

Recommended Operating Conditions

Free Air Ambient Temperature Supply Voltage

74F148

0°C to +70°C +4.5V to +5.5V

Note 1: Absolute maximum ratings are values beyond which the device may be damaged or have its useful life impaired. Functional operation under these conditions is not implied.

Note 2: Either voltage limit or current limit is sufficient to protect inputs.

DC Electrical Characteristics

Symbol	Parameter		Min	Тур	Max	Units	V _{cc}	Conditions
