# **2.5Gbps PCI Express Passive Switches**

## **General Description**

The MAX4888/MAX4889 high-speed passive switches route PCI Express<sup>®</sup> (PCIe) data between two possible destinations. The MAX4888 is a quad single-pole/double-throw (4 x SPDT) switch ideally suited for switching two half lanes of PCIe data between two destinations. The MAX4889 is an octal single-pole/double-throw (8 x SPDT) switch ideal for switching four half lanes of PCIe data between four destinations. The MAX4888/MAX4889 feature a single digital control input (SEL) to switch signal paths.

The MAX4888/MAX4889 are fully specified to operate from a single 3.0V to 3.6V power supply and also operate down to +1.65V. The MAX4888 is available in a 3.5mm x 5.5mm, 28-pin TQFN package. The MAX4889 is available in a 3.5mm x 9.0mm, 42-pin TQFN package. Both devices operate over the -40°C to +85°C temperature range.

#### **Applications**

Desktop Computers Servers/Storage Area Networks Laptops

PCI Express is a registered trademark of PCI-Sig Corp.

#### \_Features

- Single 1.65V to 3.6V Power-Supply Voltage
- Low Same-Pair Skew of 7ps
- Low 120µA (Max) Quiescent Current
- Supports PCIe Gen I Data Rates
- Flow-Through Pin Configuration for Ease of Layout
- Industry-Compatible Pinout
- Lead-Free Packaging

#### Ordering Information/ \_\_\_\_\_Selector Guide

PART	PIN- PACKAGE	CONFIGURATION	PKG CODE
MAX4888ETI+	28 TQFN-EP*	Two Half Lanes	T283555-1
MAX4889ETO+	42 TQFN-EP*	Four Half Lanes	T423590M-1

**Note:** All devices are specified over the -40°C to +85°C operating temperature range.

+Denotes lead-free package.

\*EP = Exposed paddle.

Typical Application Circuit appears at end of data sheet.

## **Pin Configurations**

#### M/IXI/M

#### **ABSOLUTE MAXIMUM RATINGS**

(All voltages referenced to GND, unless otherwise noted.)
SEL, COM_, NO_, NC_ (Note 1)0.3V to (V+ + 0.3V)
I COM NO_ I, I COM NC_ I (Note 1)0 to 2V
Continuous Current (COM_ to NO_/NC_)±70mA
Peak Current (COM_ to NO_/NC_)
(pulsed at 1ms, 10% duty cycle)±70mA
Continuous Current (SEL)±30mA
Peak Current (SEL)
(pulsed at 1ms, 10% duty cycle)±150mA

Continuous Power Dissipation ( $T_A = +70^{\circ}C$	2)
28-Pin TQFN (derate 20.8mW/°C above	
42-Pin TQFN (derate 35.7mW/°C above	+70°C)2857.1mW
Operating Temperature Range	40°C to +85°C
Storage Temperature Range	
Lead Temperature (soldering, 10s)	+300°C
Junction Temperature	+150°C

Note 1: Signals on SEL, NO\_\_, NC\_\_ or COM\_\_ exceeding V+ or GND are clamped by internal diodes. Limit forward-diode current to maximum current rating.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

#### **ELECTRICAL CHARACTERISTICS**

 $(V + = 3.0V \text{ to } 3.6V, T_A = -40^{\circ}\text{C} \text{ to } +85^{\circ}\text{C}, \text{ unless otherwise noted. Typical values are at } V + = 3.3V, T_A = +25^{\circ}\text{C}.)$  (Note 2)

Note 2: All units are 100% production tested at  $T_A = +85^{\circ}C$ . Limits over the operating temperature range are guaranteed by design and characterization and are not production tested.

**Note 3:**  $\Delta R_{ON} = R_{ON} (MAX) - R_{ON} (MIN).$ 

Note 4: Guaranteed by design. Not production tested.

Note 5: Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured over the specified analog signal range.

Figure 4. Channel Off-/On-Capacitance

#### **Detailed Description**

The MAX4888/MAX4889 high-speed passive switches route PCIe data between two possible destinations. The MAX4888/MAX4889 are ideal for routing PCIe signals to change the system configuration. For example, in a graphics application, the MAX4888/MAX4889 create two

sets of eight lanes from a single 16-lane bus. The MAX4888/MAX4889 feature a single digital control input (SEL) to switch signal paths.

The MAX4888/MAX4889 are fully specified to operate from a single 3.0V to 3.6V power supply and also operate down to 1.65V.

#### **Digital Control Input (SEL)**

The MAX4888/MAX4889 provide a single digital control input (SEL) to select the signal path between the COM\_\_ and NO\_\_/NC\_\_ channels. The truth tables for the MAX4888/MAX4889 are depicted in the *Functional Diagrams/Truth Table* section. Drive SEL rail-to-rail to minimize power consumption.

#### **Analog Signal Levels**

The MAX4888/MAX4889 accept standard PCIe signals to a maximum of V+ - 1.2V. Signals on the COM\_+ channels are routed to either the NO\_+ or NC\_+ channels, and signals on the COM\_- channels are routed to either the NO\_- or NC\_- channels. The MAX4888/MAX4889 are bidirectional switches, allowing COM\_\_, NO\_\_, and NC\_\_ to be used as either inputs or outputs.

#### **Functional Diagrams/Truth Table**

#### **Applications Information**

#### **PCIe Switching**

The MAX4888/MAX4889 primary applications are aimed at reallocating PCIe lanes (see Figure 5). For example, in graphics applications, several manufacturers have found that it is possible to improve performance by a factor of nearly two by splitting a single 16-lane PCIe bus into two 8-lane buses. Two of the more prominent examples are SLI™ (Scaled Link Interface) and CrossFire™. The MAX4889 permits a computer motherboard to operate properly with a single 16-lane graphics card, and can later be updated to dual cards. The same motherboard can be used with dual cards where the user sets a jumper or a bit through software to switch between single- or dual-card operation.

#### **Board Layout**

High-speed switches require proper layout and design procedures for optimum performance. Keep designcontrolled impedance PCB traces as short as possible or follow impedance layouts per the PCIe specification. Ensure that power-supply bypass capacitors are placed as close to the device as possible. Multiple bypass capacitors are recommended. Connect all grounds and the exposed pad to large ground planes.
